Unfortunately the incorrect western blot of β -actin was included in Fig. 8a. The corrected figure is shown here.

Fig. 8 Modulation of p75^{NTR} action or expression prevents proNGF-mediated inflammation in Müller cells. **(a)** Representative blots and densitometric analysis of TNF- α **(b)**, p-NF κ B (black columns) and NF κ B (white columns) **(c)**, and p75^{NTR} **(d)** protein levels in rMC-1 cells grown for 2 days in 25 mmol/l glucose (control) and treated for 16 h with cleavage-resistant proNGF (50 ng/ml) (+) in the presence or absence of the p75^{NTR} antagonist (A) (20 μ mol/l) or compound E (E) (10 μ mol/l), which is an inhibitor of γ -secretase-catalysed p75^{NTR} cleavage. ($n=4-7$, * $p<0.05$)
