## **CORRECTION**

## Correction to: Daily gridded temperature and precipitation datasets over the Black Sea catchment: 1961–1990 and climate change scenarios for 2071–2100

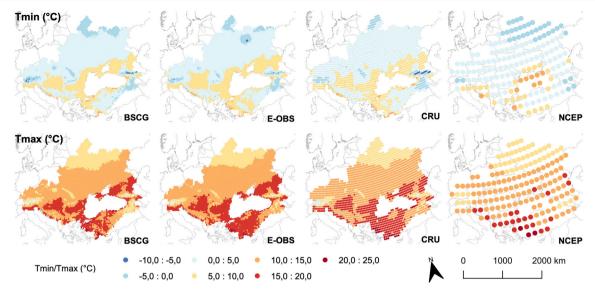

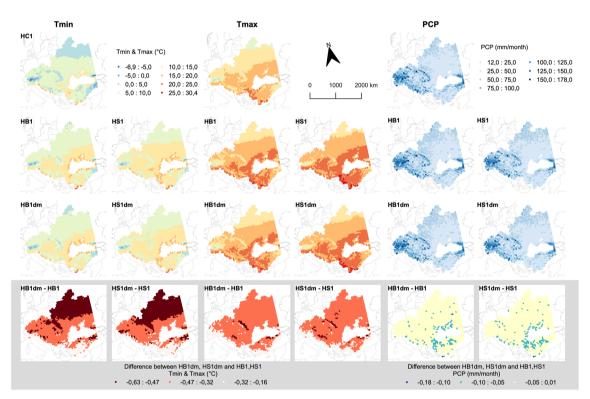

Fig. 10 Average Tmin and Tmax for the historic period (1961–1990), for the BSC grid dataset, the CRU and NCEP datasets

**Fig. 14** PRUDENCE HIRHAM mean Tmin, Tmax, and cumulative PCP for the BSC for the control period (HC1), each climate emission scenario during 2071–2100 (HB and HS1) and modelled climate emission

scenario with the DM (HB and HS1). The bottom maps show the differences between the reference HB1 and HS1 and the results obtained with the DM (HB1dm and HS1dm)

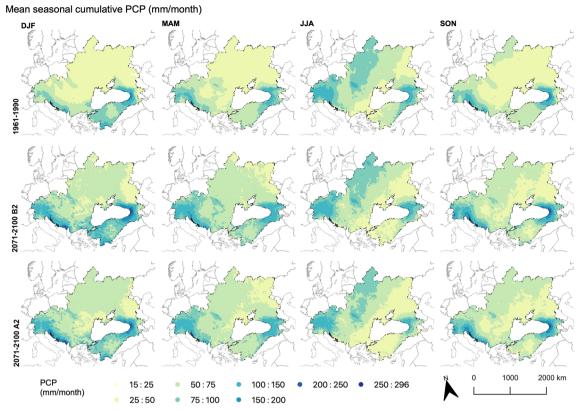

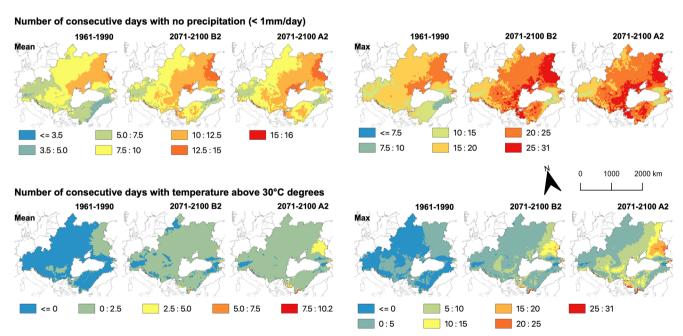

Fig. 17 Seasonal mean cumulative PCP for the historic period (1971–1990) and downscaled scenarios (B2 and A2) for 2071–2100; see Fig. 6 for season symbols

**Fig. 19** BSC mean and maximum dry spell duration (top) and heat wave duration (bottom) for the historic period (1971–1990) and both scenarios (B2 and A2) for 2071–2100. The dry spell represents the length of

consecutive number of days within 1 month with PCP bellow 1 mm/ day. The heat wave duration represents the number of consecutive days within one month with temperature above  $30^{\circ}\mathrm{C}$
