The following clarification to the content of Table 3 (MDMB-CHMICA data from previously published cases of acute (non-fatal) and fatal drug intoxications) of the named manuscript needs to be brought to the readership's attention:

The last two cases cited from the Seywright et al. (2016) publication need to be considered as autopsy cases (not a fatal intoxication as stated for case 44/m) and should read as follows:

Autopsy cases	44/m	Post-mortem blood	1 ng/mL
	38/m		< 1 ng/mL
