Currently, members of the Failure Analysis Society are collaborating with the Handbook Committee of ASM International to develop a new edition of *ASM Handbook*, Volume 12, *Fractography*. The current edition was last modified in 1987. That's more than 30 years ago—Think about the advances in technology and data collection since then. Think about how many fractographic images you've collected since then. Think of an atlas that has compiled all your fractographs and the fractographs of all of your colleagues for the past 30 years. That is the goal!

The editorial board for Volume 12 needs your help and contributions. We are seeking authors who can contribute

Pierre Dupont, P.E.  
President  
ASM Failure Analysis Society

James F. Lane, P.E.  
Vice President/President-Elect  
ASM Failure Analysis Society

papers on the principles, practices, and applications of fractography in failure analysis and materials characterization. You can contribute through case histories of failures with fractographs illustrating fracture behavior, examination, and interpretation of metals, plastics, composites, ceramics, glasses, and electronic materials. We also need fractographs that show common, uncommon, and unusual fractures, so start compiling your images.

We need your help. We cannot accomplish this monumental task without you. Please consider participating in this endeavor. You can indicate your interest by sending an e-mail to Craig Schroeder, Chair of the Volume 12 Editorial Committee, at [handbooks@asminternational.org](mailto:handbooks@asminternational.org). Again, please strongly consider participating in this endeavor. Thank you in advance for your support!
