

Gastrointestinal Tract and Abdomen

ESOPHAGUS

G-1	Retention of Barium in the Hypopharynx (Esp. Cricopharyngeal Achalasia) (Roentgen Counterpart of Dysphagia)
G-2	Esophageal Motility Disorder (Aperistalsis, Tertiary Contractions, Spasm, and other Forms)
G-3	Achalasia (Cardiospasm) of the Esophagus
G-4	Air in the Esophagus
G-5	Extrinsic Impression on the Cervical Esophagus
G-6	Extrinsic Impression on the Thoracic Esophagus
G-7	Extrinsic Vascular Impression on the Esophagus (See E-18)
G-8	Tracheoesophageal or Esophagobronchial Fistula
G-9	Double-Barrel Esophagus
G-10-1	Diverticulum of the Esophagus—Upper Third
G-10-2	Diverticulum of the Esophagus—Middle Third
G-10-3	Diverticulum of the Esophagus—Lower Third
G-10-4	Diverticula of the Esophagus—Diffuse
G-11	Solitary Intramural or Intraluminal Filling Defect of the Esophagus
G-12	Localized Constriction or Narrowing of the Esophagus
G-13	Thickening of the Esophageal Wall (CT, US, MRI)
G-14	Esophageal Ulceration(s)
G-15	Transverse Mucosal Folds in the Esophagus
G-16	Widespread Irregular or Nodular Esophageal Mucosa
G-17	Esophageal Plaques
G-18	Esophageal Varices
G-19	Esophageal Lesion in a Child

STOMACH

G-20	Abnormal Position of the Stomach (Rotation or Displacement)
-------------	---

DUODENUM

G-21	Filling Defect(s) in the Stomach (Intraluminal, Mucosal, or Intramural)
G-22	Filling Defect in a Gastric Remnant
G-23	Lesion Involving the Gastric Fundus (Intrinsic or Extrinsic)
G-24	Gastric Ulceration
G-25	Erosive Gastritis
G-26	Large Gastric Folds (Local or Widespread); Also Thickening of the Stomach Wall on CT, US, or MRI
G-27	Linitis Plastica Pattern of the Stomach (See G-28)
G-28	Narrowing or Deformity of the Gastric Antrum (See G-27)
G-29	Combined Gastric Antral and Duodenal Disease
G-30	Gastric Outlet Obstruction
G-31	Dilatation of the Stomach without Obstruction
G-32	Interstitial Emphysema of the Stomach
G-33	Gastrocolic or Gastroduodenocolic Fistula
G-34	Increased Retrogastric or Retroduodenal Space
G-35	Extrinsic Indentation on the Duodenum (See G-36)
G-36	Widening of the Duodenal C-Loop (See G-35)
G-37	Solitary Intrinsic Duodenal Mass
G-38	Multiple or Diffuse Filling Defects in the Duodenum
G-39	Diminished or Absent Fold Pattern in the Duodenum and Small Bowel
G-40	Nodular or Thickened Folds in the Duodenum; Also Thickening of the Duodenal Wall on CT, US, or MRI
G-41	Postbulbar Duodenal Ulceration
G-42	Duodenal Narrowing or Obstruction (See G-43, G-44)
G-43	Duodenal Obstruction in an Infant (Double Bubble Sign)
G-44	Superior Mesenteric Artery Syndrome (Band-Like Constriction of Transverse Duodenum)
G-45	Duodenal Dilatation without Obstruction

SMALL BOWEL

G-46	Abnormal Position of Small Bowel Loops
G-47	Separation or Displacement of Small Bowel Loops
G-48	Solitary Mass in the Small Bowel with Preserved Mucosa
G-49-S1	Benign Tumors of the Small Bowel
G-49-S2	Malignant Tumors of the Small Bowel
G-50	Multiple Intraluminal, Mucosal, or Intramural Filling Defects in the Small Bowel
G-51-1	Small Bowel Diverticulum
G-51-2	Small Bowel Pseudodiverticulum

G-52	Thickening of the Small Bowel Wall, Generalized or Localized (Barium, US, CT, MRI)
G-53	Mucosal Destruction of the Small Bowel with or without Stricture (Local or Widespread)
G-54	Regular Thickening of Small Bowel Folds (> 3 mm)
G-55	Generalized Irregular or Distorted Small Bowel Folds
G-56	Simultaneous Fold Thickening of the Stomach and Small Bowel
G-57	Malabsorption Pattern in the Small Bowel
G-58	Blind Loop Syndrome
G-59	Small Bowel Dilatation with Thickened Mucosal Fold Pattern
G-60	Small Bowel Dilatation with Normal Fold Pattern
G-61	Acute Nonobstructive Small Bowel Distention ("Paralytic Ileus")
G-62	Chronic Nonobstructive Small Bowel Distention
G-63	Terminal Ileum Lesion
SMALL AND LARGE BOWEL	
G-64-S	Nondiaphragmatic Hernias
G-65	Abnormalities of Bowel Rotation
G-66	Congenital Syndromes Associated with Intestinal Malrotation
G-67	Aphthoid Ulcers in the Small Bowel or Colon
G-68	Innumerable Tiny Nodules (Sand-like or Granular Lucencies Smaller Than 5 mm) in the Small Bowel or Colon
G-69	Mesenteric Vascular Compromise (Intestinal Ischemia, Infarction)
G-70	Gas in the Bowel Wall (Pneumatosis Intestinalis)
G-71-1	Small and Large Bowel Wall Thickening: Homogeneous (Stratified or Mixed) Attenuation on Postcontrast CT
G-71-2	Small and Large Bowel Wall Thickening: Heterogeneous (Stratified or Mixed) Attenuation on Postcontrast CT
G-72-1	Mild Thickening (<2 cm) of Bowel Wall on Postcontrast CT
G-72-2	Marked Thickening (>2 cm) of Bowel Wall on Postcontrast CT
G-73	Symmetric versus Asymmetric Thickening of Bowel Wall on Postcontrast CT
G-74-1	Focal Bowel Wall Thickening (<10 cm) on Postcontrast CT
G-74-2	Segmental Bowel Wall Thickening (10–30 cm) on Postcontrast CT
G-74-3	Diffuse Bowel Wall Thickening on Postcontrast CT
G-75	Residual Intestinal Barium After Gastrointestinal Study (More Than One Week)
G-76	Intestinal Obstruction in a Newborn
G-77	Intestinal Obstruction in a Child (See G-76)

APPENDIX, COLON, AND RECTUM

G-78	Intestinal Obstruction in an Adult
G-79	Intestinal Pseudo-Obstruction (Ogilvie Syndrome); Bowel Obstruction in the Absence of Mechanical Blockage
G-80	Sentinel Loop (Localized Dilatation of Small and/or Large Bowel)
G-81	Appendiceal Lesion or Mass Adjacent to Appendix
G-82-S	Congenital Anomalies and Variations of the Appendix
G-83	Solitary Filling Defect in the Colon
G-84-S	Classification of Colonic Tumors and Tumor-Like Lesions
G-85	Annular (“Apple Core” or “Napkin Ring”) Lesion of the Colon
G-86	Segmental Narrowing of the Colon
G-87	Multiple Filling Defects in the Colon
G-88	Colitis (Ulceration, Edema, Spasm); Also Thickening of the Colon Wall on CT, US, or MRI
G-89	Pericolic Abscess
G-90	Double Tracking of Barium in the Distal Colon
G-91	Smooth Colon
G-92	Colonic Distention without Obstruction
G-93	Megacolon
G-94	Toxic Megacolon
G-95-1	Colon of Reduced Caliber (Microcolon) in a Newborn
G-95-2	Meconium Plug in a Newborn
G-96	Cecal Lesion
G-97	Conical or Contracted Cecum
G-98	Enlargement of the Ileocecal Valve
G-99	Anterior Indentation on the Rectosigmoid Junction
G-100	Rectal Disease on Barium Enema
G-101	Rectovaginal Fistula
G-102	Increased Retrorectal or Presacral Space (See C-50)

GASTROINTESTINAL TRACT, INCLUSIVE

G-103	“Thumbprinting” of the Gastrointestinal Tract (Multiple Intramural Defects)
G-104	Intramural Hematoma of the Gastrointestinal Tract
G-105	Bull’s-Eye Lesion (Solitary or Multiple Nodules in the Gastrointestinal Tract with Large Central Ulceration)
G-106	Polypsis Syndromes
G-107	Internal or External Fistula Involving the Gastrointestinal Tract

GALLBLADDER

- G-108** Nonvisualization of the Gallbladder (US, RAI, CT)
G-109 Small or Contracted Gallbladder (US, CT, MRI)
G-110 Enlarged Gallbladder (US, CT, MRI)
G-111 Distended Gallbladder in a Child (US, CT)
G-112 Multiseptate Gallbladder (US, CT)
G-113 Gallbladder Disease Secondary to Cystic Duct or Infundibulum Obstruction
G-114 Calcification in the Gallbladder or Common Bile Duct
G-115-S1 Artifacts That Mimic Gallstones
G-115-S2 Structures That Sonographically Mimic The Gallbladder (US)
G-116 Fixed Polypoid Lesion(s) or Filling Defect(s) in the Gallbladder (US, CT, MRI)
G-117 Nonshadowing Lesion in the Gallbladder (US)
G-118 Echo(es) Within the Gallbladder (US)
G-119-1 Echogenic Bile/Gallbladder Sludge (US); High Density Bile (CT)
G-119-2 Gallstone or Sludge in Fetal or Neonatal Gallbladder (US)
G-120 Increased Attenuation of Gallbladder Lumen (CT)
G-121 Hyperechoic Focus in the Gallbladder Wall (US)
G-122 Focal Thickening of the Gallbladder Wall (>3mm) (US, CT)
G-123 Diffuse Thickening of the Gallbladder Wall (US, CT, MRI)
G-124 Striations in a Thickened Gallbladder Wall (US, CT)
G-125 Extrinsic Deformity or Displacement of the Gallbladder (CAG, MRCP, CT)
G-126 Pericholecystic Fluid on Ultrasound
G-127 Delayed Visualization of the Gallbladder on Scintigraphy
G-128 Gas in the Gallbladder or Biliary Tract

G

BILIARY TRACT

- G-129** Congenital Disorders or Syndromes with an Abnormal Biliary Tract
G-130 Dilatation of Bile Ducts (CAG, MRCP, US, CT, MRI)
G-131 Biliary Dilatation Without Jaundice or Obstruction
G-132 Biliary Obstruction Without Dilatation
G-133-1 Cystic and Saccular Lesions of the Bile Ducts—With Normal-sized Intrahepatic Bile Ducts (CAG, MRCP)
G-133-2 Cystic and Saccular Lesions of the Bile Ducts—With Dilatation of Intrahepatic Bile Ducts (CAG, MRCP)
G-134 Filling Defect or Segmental Lesion in the Bile Ducts (CAG, MRCP, US, CT)
G-135 Thickening of Bile Duct Walls (US)
G-136 Echoes Within the Bile Ducts (US)
G-137 Bile Duct Narrowing or Obstruction (CAG, MRCP)

LIVER

DIFFUSE OR MULTIFOCAL LIVER DISEASE

G-138	Enlarged Papilla of Vater
G-139	Biliary-Enteric Fistula (See G-128)
G-140	Biliary-Pleural (or Bronchial) Fistula
G-141-1	Hepatomegaly (See G-141-2)
G-141-2	Congenital Hepatomegaly
G-142	Diffuse Hepatic Calcifications (PF, US, CT)
G-143	Fetal or Neonatal Liver Calcification
G-144	Fatty Change in the Liver (Steatosis) (US, CT, MRI)
G-145	Perfusion Abnormalities of the Liver
G-146	Patchy Hepatogram (Areas of Low Density on Angiography or Postcontrast CT)
G-147	Generalized or Multifocal Decreased Echogenicity of the Liver on Ultrasound (Hypoechoic)
G-148	Generalized or Multifocal Increased Echogenicity of the Liver on Ultrasound (Hyperechoic)
G-149	Generalized High Density Liver (Nonenhanced CT)
G-150	Generalized or Multifocal Low Density Liver (Nonenhanced CT)
G-151	Multiple Hypointense Liver Lesions on T2-Weighted MR Images
G-152	Diffusely Decreased Liver Intensity on MRI
G-153	Spontaneous Liver Rupture

FOCAL LIVER LESIONS

G-154	Neoplasm of the Liver (Child or Adult)
G-155-1	Solid Liver Lesion—Adult (US, CT, MRI)
G-155-2	Solid Liver Lesion—Older Child or Adolescent
G-155-3	Solid Liver Lesion—Infant or Young Child (Under Age 5)
G-156	Solid Liver Masses—Multiple
G-157	Cystic Liver Lesion(s) (US, CT, MRI)
G-158-1	Liver Lesion Characterized by Linear or Stellate Central Scar (CT, US, Angio)
G-158-2	Liver Lesion With Central Scar on MRI
G-159	Liver Lesion Characterized by Blood or Hemorrhage
G-160	Liver Lesion Characterized by Calcification
G-161	Liver Lesion Characterized by Fat (CT, MRI)
G-162	Liver Lesion Characterized by Bull's-Eye Appearance
G-163	Liver Lesion Characterized by Fluid-fluid Level
G-164	Liver Lesion Characterized by "Fill-in" (Angio, Postcontrast CT or MRI)
G-165-S	Liver Lesions—Clinical Considerations

G-166	Liver Metastases—Calcified
G-167	Liver Metastases—Hypervascular
G-168	Liver Metastases—Hemorrhagic
G-169	Liver Metastases—Cystic
G-170	Liver Metastases—Ultrasound Characteristics
G-171	Avascular or Hypovascular Liver Lesion (Angio, Postcontrast CT or MRI)
G-172	Hypervascular or Hyperdense Liver Lesion (Angio, Postcontrast CT or MRI)
G-173	Anechoic Liver Lesion (Usually Cystic on US)
G-174	Hypoechoic Liver Lesion (US)
G-175	Hyperechoic Liver Lesion (US)
G-176	Isoechoic Liver Lesion (US)
G-177	Heterogeneous Hepatic Echogenicity (Parenchyma or Mass) on US
G-178-S	Hepatic Pseudolesion (US)
G-179	Intrahepatic Acoustic Shadowing (Linear versus Focal) on US
G-180	Focal Low Density (Decreased Attenuation) Liver Lesion (Nonenhanced CT)
G-181	Focal Low Density Liver Lesion (Postcontrast CT)
G-182	Focal High Density Liver Lesion (Nonenhanced CT)
G-184-S	MRI Characteristics of Various Liver Lesions
G-185	Liver Lesions with Circumferential Rim on MRI
G-186	Focal High Signal Intensity Liver Lesion on T1-Weighted MR Images
 HEPATIC AND PORTAL VEINS; PERIPORTAL AREA	
G-187	Damping of Hepatic Vein Doppler Waveform (US)
G-188	Hepatic Vein Dilatation
G-189	Hepatic Vein Thromboembolism or Obstruction (Budd-Chiari S.) (Incl. Obstruction of Upper Inferior Vena Cava)
G-190	Portal Vein Thrombosis or Obstruction
G-191	Portal Hypertension
G-192	Gas in the Portal Veins
G-193	Periportal Hypoechoogenicity on US/Periportal Low Density on CT
G-194	Prominent Periportal Echoes (Starry Sky Liver) in Adults on Ultrasound
G-195	Prominent Periportal Echoes in Neonates on Ultrasound
G-196	Increased Periportal Signal Intensity on MRI

SPLEEN

- G-197** Splenomegaly: A Classification (See G-198)
G-198 Congenital Syndromes with Splenomegaly
G-199 Splenomegaly with Normal Echogenicity (US)
G-200 Splenomegaly with Diffuse Hypoechoic Pattern (US)
G-201 Splenomegaly with Diffuse Hyperechoic Pattern (US)
G-202 Small or Nonvisualized Spleen
G-203 Splenic Calcification—Solitary
G-204 Splenic Calcifications—Multiple
G-205 Solitary Lesion of the Spleen (US, CT, MRI)
G-206 Focal Cystic or Low Density Splenic Lesion (CT, MRI)—Usually Hypoechoic on US
G-207 Focal Hyperechoic Splenic Lesion (US)
G-208 Diffuse Increased Splenic Density on CT
G-209 Multiple Splenic Hypointensities on MRI
G-210 Multiple Splenic Hyperintensities on T2-Weighted MR Images
G-211 Abnormality on Splenic Arteriography
G-212 Splenic Vein Obstruction (US, Postcontrast CT, MRI, or Angio)

PANCREAS

G

- G-213** Solid Pancreatic Lesion (US, CT, MRI)
G-214 Cystic or Low Density Pancreatic Lesion (CT, MRI)—Hypoechoic on US
G-215 Complex Pancreatic Lesion (US)
G-216 Increased Echogenicity of Pancreas (US)
G-217 Focal Shadowing Pancreatic Lesions (US)
G-218 Pancreatic Calcification Without Mass
G-219 Pancreatic Lesion Characterized by Calcification
G-220 Pancreatic Lesion Characterized by Blood or Hemorrhage
G-221 Pancreatic Lesion Characterized by Fat
G-222 Fatty Replacement or Infiltration of Pancreas
G-223 Hypervascular Pancreatic Lesion (Postcontrast CT, MRI, or Angio)
G-224 Pancreatic Angiographic Abnormality (Displacement of Vessels, Encasement, Extravasation, Hypervascularity, Hypovascularity, Other)
G-225 Dilated Pancreatic Duct
G-226 Pancreatic Duct Stricture (ERCP, MRCP)
G-227 Gas in Pancreatic Duct

MESENTERY AND PERITONEUM

G-228	Cystic Mesenteric or Intraperitoneal Lesion (US, CT, MRI)
G-229	Solid Lesion of the Mesentery or Mesenteric Root (US, CT, MRI)
G-230	Alteration in Density of the Mesenteric Fat on CT ("Misty Mesentery")
G-231	Peritoneal Disease
G-232	Diffuse Peritoneal Thickening (US, CT, MRI)
G-233	Peritoneal Fluid Collection (Ascites) in an Adult (Esp. on US, CT, MRI)
G-234	Peritoneal Fluid (Ascites) in an Infant or Child
G-235	Chylous or Lymphatic Ascites

ABDOMINAL AIR, GAS, OR ABSCESS

G-236	Spontaneous Pneumoperitoneum without Peritonitis
G-237	Pneumoperitoneum with Peritonitis
G-238	Perforated Hollow Viscus in an Infant
G-239	Abnormal Gas Collection in the Right Upper Quadrant
G-240	Abnormal Gas Collection in the Left Upper Quadrant
G-241	Large Abdominal Gas Pocket
G-242	Abdominal or Pelvic Abscess
G-243	Right Anterior Pararenal Space Abscess (Esp. on US, CT, or MRI)
G-244-S	Abscess Mimics on Abdominal US, CT, or MRI
G-245	Decreased Abdominal Gas in a Newborn
G-246	Decreased Abdominal Gas in an Adult

G

ABDOMINAL CALCIFICATIONS

G-247-1	Abdominal Calcification(s) in an Infant or Child (See G-143, G-203, 204, G-247-2)
G-247-2	Congenital Syndromes with Abdominal Calcifications
G-248	Nonvisceral Abdominal Calcification
G-249	Abdominal Calcifications that Layer in the Upright Position
G-250	Abdominal Calcification(s) with a Concretion or Annular Morphology
G-251	Widespread Abdominal Calcifications
G-252	Abdominal Wall Calcification

ABDOMEN, MISCELLANEOUS

G-253	Abdominal Wall Mass (Esp. on US, CT, or MRI)
G-254	Cystic Abdominal Mass in a Fetus or Newborn (US)
G-255	Upper Abdominal Mass in a Neonate or Child

G-256	Lower Abdominal Mass in a Neonate or Child
G-257	Abdominal Lymphadenopathy (US, CT, MRI)
G-258	Fat Density in the Abdomen (CT, MRI)
G-259	“Pseudokidney” or “Bull’s-Eye” Sign in the Abdomen (US)
G-260	Abnormal Abdominal Vessels on Angiography
G-261	Complications of AIDS in the Gastrointestinal Tract and Abdomen

Gamut G-1

**RETENTION OF BARIUM
IN THE HYPOPHARYNX
(ESP. CRICOPHARYNGEAL
ACHALASIA) (ROENTGEN
COUNTERPART OF DYSPHAGIA)**

COMMON

1. Connective tissue disease (collagen vascular disease)^g (esp. scleroderma; dermatomyositis)
2. Cricopharyngeal achalasia (minor to severe muscular incoordination)
3. Esophageal obstruction (eg, achalasia; carcinoma)
4. Muscular disorder^g (eg, myasthenia gravis; myotonic dystrophy; steroid or thyrotoxic myopathy; oculopharyngeal myopathy)
5. Neurologic disorder^g (eg, stroke; bulbar or pseudobulbar palsy; bulbar poliomyelitis; high unilateral cervical vagotomy; multiple sclerosis; parkinsonism; amyotrophic lateral sclerosis; syringomyelia; Riley-Day S. (familial dysautonomia); peripheral or central cranial nerve palsy; diphtheria; tetanus)
6. Postradiation therapy for pharyngeal or neck malignancy
7. Zenker's diverticulum

UNCOMMON

1. Abscess; cellulitis (esp. pharyngeal; peritonsillar)
2. Esophageal web (eg, congenital; Plummer-Vinson S.)
3. Foreign body
4. Hematoma of neck
5. Lymphadenopathy, cervical
6. [Pseudodeficit from total laryngectomy]
7. Stricture (eg, lye)
8. Thyroid neoplasm

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

**ESOPHAGEAL MOTILITY DISORDER
(APERISTALSIS, TERTIARY
CONTRACTIONS, SPASM,
AND OTHER FORMS)**

COMMON

- +*1. Achalasia (cardiospasm) (See G-3)
- 2. Chalasia (infantile gastroesophageal regurgitation)
- 3. Cricopharyngeal achalasia
- +4. Diffuse esophageal spasm, idiopathic
- +*5. Esophagitis (eg, reflux or peptic; radiation; caustic; monilial; herpes; viral)
- 6. Neurologic disorder^g (eg, stroke; peripheral or central cranial nerve palsy; pseudobulbar palsy; bulbar poliomyelitis; syringomyelia; high unilateral cervical vagotomy; multiple sclerosis; parkinsonism; amyotrophic lateral sclerosis; cerebral disease; Riley-Day S. {familial dysautonomia})
- +7. Obstructive lesion, extrinsic or intrinsic (eg, Schatzki ring; stricture; esophageal neoplasm; foreign body; web; mediastinal tumor, cyst, or lymphadenopathy; mediastinitis)
- +*8. Postsurgical repair of esophageal atresia, tracheoesophageal fistula, or hiatal hernia
- +9. Presbyesophagus
- *10. Scleroderma
- 11. Zenker's diverticulum

UNCOMMON

1. Alcoholic neuropathy
- *2. Amyloidosis

(continued)

3. Behçet S.
 - *4. Chagas' disease
 5. Congenital syndromes (eg, Ehlers-Danlos S.; cutis laxa; G syndrome)
 - *6. Connective tissue disease (collagen vascular disease)_g, other (eg, dermatomyositis; polymyositis; mixed connective tissue disease {MCTD}; lupus erythematosus; rheumatoid arthritis)
 - *7. Crohn's disease
 - +8. Diabetic neuropathy
 - *9. Drug reaction (atropine; curare; Pro-Banthine)
 - +10. Hypertensive lower esophageal sphincter
 11. Iatrogenic (eg, postvagotomy S.; sclerotherapy for varices)
 12. Intramural diverticulosis of esophagus
 - +13. Muscular disorder_g (esp. myasthenia gravis; oculopharyngeal myopathy; muscular or myotonic dystrophy; steroid or thyrotoxic myopathy)
 - +14. Neoplasm, infiltrative (eg, diffuse esophageal carcinoma; leukemia)
 - +15. Nutcracker esophagus
 16. Paraneoplastic S.
 17. Thyroid disease (myxedema; thyrotoxicosis)
 18. Tylosis (keratosis palmaris et plantaris familiaris)
- * Esophagus may be aperistaltic.
+ Tertiary contractions often present.

ACHALASIA (CARDIOSPASM) OF THE ESOPHAGUS

COMMON

1. [Carcinoma, esophageal or gastric]
2. Idiopathic
3. [Stricture from esophagitis]

UNCOMMON

1. Amyloidosis
2. Cerebrovascular accident (stroke)
3. Chagas' disease
4. Chronic idiopathic intestinal pseudo-obstruction
5. Connective tissue disease (collagen disease)_g (esp. scleroderma)
6. Diabetic neuropathy
7. Drug reaction (esp. atropine; Pro-Banthine)
8. Hypertensive lower esophageal sphincter
9. Iatrogenic (eg, vagotomy)
10. Nerve destruction (myenteric plexus, sympathetic, or vagus), esp. by neoplasm

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

1. Achalasia (See G-3)
2. Infant respiratory distress syndrome (hyaline membrane disease)
3. Normal
4. Respirator therapy; intubation
5. Scleroderma

UNCOMMON

1. Caustic esophagitis
2. Chagas' disease
3. Diverticulum, esophageal
4. Gastroesophageal regurgitation, infantile or adult
5. Hypertensive lower esophageal sphincter
6. Obstruction of esophagus (eg, neoplasm of esophagus; mediastinal tumor, cyst, or lymphadenopathy; mediastinitis)
7. Postoperative (eg, esophageal or pulmonary surgery)

Gamut G-5**EXTRINSIC IMPRESSION ON THE CERVICAL ESOPHAGUS****COMMON**

1. Cricopharyngeal muscle
2. [Esophageal web]
3. Lymph node enlargement
4. Osteophyte of cervical spine
5. Pharyngeal venous plexus (postcricoid impression)
6. Soft tissue abscess or hematoma (esp. retro-laryngeal)
7. Thyroid mass (eg, goiter; adenoma; carcinoma; thyroiditis)

UNCOMMON

1. Aneurysm or buckling of carotid or innominate artery
2. Cervical spine lesion, other (eg, osteomyelitis; neoplasm; anteriorly herniated disk)
3. Ectopic gastric mucosa
4. Parathyroid tumor (eg, adenoma; carcinoma)
5. [Gastrointestinal stromal tumor_g (esp. leiomyoma) or lipoma of esophagus]
6. Tracheal or laryngeal neoplasm

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-6

**EXTRINSIC IMPRESSION
ON THE THORACIC ESOPHAGUS**

COMMON

1. Cardiac enlargement (esp. left atrium)
2. Duplication cyst (bronchogenic or enteric)
3. Hiatal hernia (esp. paraesophageal)
4. Mediastinal lymphadenopathy (eg, metastasis; lymphoma_g; tuberculosis; histoplasmosis; sarcoidosis)
5. Mediastinal mass (eg, tumor; cyst; mediastinitis)
6. Normal structure (left main stem bronchus; aortic knob; confluence of left pulmonary veins)
7. Pericardial lesion (eg, effusion; cyst; tumor)
(See E-43)
8. Pleuropulmonary fibrosis at lung apex, esp. tuberculosis (pseudoimpression)
9. Pulmonary mass (esp. carcinoma of lung)
10. Vascular impression, abnormal (eg, aortic aneurysm or tortuosity; coarctation of aorta; right, cervical, or double aortic arch; truncus arteriosus; aberrant right or left subclavian artery; pulmonary sling) (See G-7)

UNCOMMON

1. Neurinoma of vagus or phrenic nerve
2. Spinal abnormality (eg, kyphosis; scoliosis; osteophyte; DISH; neoplasm; osteomyelitis)
3. Tracheal neoplasm (See B-111, F-81-1)

References

1. Gelfand DW: Gastrointestinal Radiology. New York: Churchill Livingstone, 1984, p 190

Gamut G-7

**EXTRINSIC VASCULAR IMPRESSION
ON THE ESOPHAGUS (See E-18)**

COMMON

1. Aberrant right or left subclavian artery
2. Aortic abnormality, acquired (eg, aneurysm; tortuosity)
3. Aortic knob
4. Coarctation of aorta
5. Right aortic arch (esp. posterior or type II aortic arch)

UNCOMMON

1. Anomalous innominate artery
2. Aortic diverticulum
3. APVC, total (below diaphragm)
4. Arteriovenous malformation
5. Azygos or hemiazygos vein dilatation
6. Cervical aortic arch
7. Corrected transposition (medially placed pulmonary artery)
8. Double aortic arch
9. Enlarged “bronchial” artery (incl. truncus arteriosus; absent main pulmonary artery)
10. Pulmonary artery “sling” (anomalous origin of left pulmonary artery)
11. Pulmonary vein confluence draining into back of left atrium
12. Sequestration of lung (anomalous artery from aorta)

Gamut G-8**TRACHEOESOPHAGEAL OR
ESOPHAGOBRONCHIAL FISTULA****COMMON**

1. Carcinoma of esophagus, lung or trachea
2. Congenital, with or without esophageal atresia

UNCOMMON

1. Abscess, pulmonary or mediastinal
2. Actinomycosis
3. Behcet S.
4. Caustic esophagitis (esp. lye)
5. Crohn's disease
6. Diverticulum of esophagus, perforated
7. Esophageal lung (sequestration)
8. Granulomatous lymphadenitis (esp. histoplasmosis; tuberculosis; syphilis)
9. Infected pulmonary or mediastinal cyst or sequestration of lung
10. Lymphoma_g
11. Radiation therapy
12. Rupture of esophagus, "spontaneous" or traumatic (eg, foreign body; missile), or iatrogenic (surgery; instrumentation)

Gamut G-9**DOUBLE-BARREL ESOPHAGUS*****COMMON**

1. Dissecting intramural hematoma or hemorrhage
 - a. Severe vomiting (eg, Boerhaave S. with esophageal perforation, or Mallory-Weiss S. with esophageal tear)
 - b. Trauma
 - c. Instrumentation (eg, nasogastric intubation; endoscopy)
 - d. Ingestion of sharp foreign body
 - e. Spontaneous (eg, bleeding diathesis)

UNCOMMON

1. Esophageal duplication
2. Crohn's disease
3. Intraluminal diverticulum
4. Intramural abscess (eg, postendoscopy or foreign body perforation)
5. Intramural pseudodiverticulosis

* Barium opacification of an intramural dissecting channel separated from the normal esophageal lumen by an intervening radiolucent mucosal stripe.

Gamut G-10-1

DIVERTICULUM OF THE ESOPHAGUS—UPPER THIRD

COMMON

1. Zenker's diverticulum (pulsion type, posterior wall)

UNCOMMON

1. Killian-Jamieson diverticulum
2. Lateral pharyngeal pouch (pharyngocoele), congenital or acquired (eg, glass blower; trumpet player)
3. Traction diverticulum (esp. after upper lobectomy, laryngectomy, or neck infection)

References

1. Eisenberg RL: Gastrointestinal Radiology: A Pattern Approach. (ed 3) Philadelphia: Lippincott, 1996, pp 119–124

Gamut G-10-2

DIVERTICULUM OF THE ESOPHAGUS—MIDDLE THIRD

COMMON

1. Acquired pulsion diverticulum due to esophageal dysmotility
2. Traction diverticulum (esp. from adherent granulomatous lymph node)

UNCOMMON

1. Congenital pulsion diverticulum (interaortico-bronchial)
2. [Neurenteric or duplication cyst, communicating]

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

References

1. Eisenberg RL: Gastrointestinal Radiology: A Pattern Approach. (ed 3) Philadelphia: Lippincott, 1996, pp 119–124

Gamut G-11**SOLITARY INTRAMURAL
OR INTRALUMINAL FILLING
DEFECT OF THE ESOPHAGUS****COMMON**

1. Air bubble; meat impaction; coin; other foreign body
2. Carcinoma of esophagus or stomach
3. Extrinsic lesion invading the esophageal wall (eg, carcinoma of lung; granulomatous lymph node)
4. Gastrointestinal stromal tumor_g (esp. leiomyoma)
5. Papilloma, squamous
6. Plaque-like lesion (eg, candidiasis—usually multiple) (See G-17)
7. Polyp_g (eg, adenomatous; fibrovascular; inflammatory esophagogastric)
8. Varix

UNCOMMON

1. Abscess
2. Angioma
3. Duplication cyst (bronchogenic or enteric)
4. Hematoma, intramural
5. Lipoma
6. Lymphoma_g; leukemia
7. Melanoma
8. Metastasis

9. Prolapsed gastric fold
10. Sarcoma (eg, leiomyosarcoma; Kaposi sarcoma)
11. Ulcer with edema (See G-14)
12. Villous adenoma

References

1. Eisenberg RL: Gastrointestinal Radiology: A Pattern Approach. (ed 3) Philadelphia: Lippincott, 1996, pp 98–118

Gamut G-12**LOCALIZED CONSTRICION OR
NARROWING OF THE ESOPHAGUS****COMMON**

1. Achalasia (cardiospasm)
2. Congenital atresia or stenosis, with or without T-E fistula
3. Duplication cyst (eg, bronchogenic cyst; gastroenteric cyst; neureteric cyst)
4. Extrinsic pressure (eg, aortic knob; left main stem bronchus; aortic aneurysm or tortuosity, right aortic arch) (See G-5 to G-7)
5. Lower esophageal ring (Schatzki ring)
6. Neoplasm, benign (esp. gastrointestinal stromal tumor_g—leiomyoma; lipoma)
7. Neoplasm, malignant (esp. carcinoma or leiomyosarcoma of esophagus or gastric cardia)
8. Physiologic (muscular ring; inferior esophageal sphincter; normal sling fibers of diaphragm)
9. Postoperative (fundoplication; repair of hiatal hernia or esophageal atresia); postgastrectomy alkaline reflux esophagitis
10. Spasm, localized (eg, lower esophageal spasm)

(continued)

11. Stricture (eg, peptic or reflux esophagitis; corrosive esophagitis—lye; oral medication; postradiation; nasogastric intubation; Barrett esophagus; congenital)
12. Web or diaphragm of esophagus

UNCOMMON

1. Benign mucous membrane pemphigoid
2. Cartilaginous ring (tracheobronchial rest)
3. Chronic granulomatous disease of childhood
4. Crohn's disease
5. Epidermolysis bullosa
6. Graft-versus-host disease
7. Hemorrhage in distal esophagus with adherent thrombus (eg, Mallory-Weiss S.; varices)
8. Hiatal hernia (esp. with short esophagus)
9. Infectious or inflammatory esophagitis (eg, candidiasis; herpes simplex; tuberculosis; histoplasmosis; actinomycosis; syphilis; eosinophilic esophagitis; Behcet S.)
10. Intramural esophageal pseudodiverticulosis
11. Lymphoma^g
12. Metastasis or direct spread from adjacent malignancy
13. Peptic esophageal ulcer
14. Postinstrumentation stricture (eg, nasogastric intubation; endoscopic perforation)
15. Sclerotherapy of esophageal varices
16. Tylosis (keratosis palmaris et plantaris familiaris)
17. Zollinger-Ellison S.

THICKENING OF THE ESOPHAGEAL WALL (CT, US, MRI)**COMMON**

1. Carcinoma (squamous cell carcinoma in proximal 4/5; adenocarcinoma in distal fifth)
2. Corrosive esophagitis (eg, lye; oral medication)
3. Duplication cyst (eg, bronchogenic cyst; gastroenteric cyst; neureneric cyst)
4. Infectious or inflammatory esophagitis (eg, candidiasis; herpes simplex; tuberculosis; histoplasmosis; actinomycosis; syphilis; eosinophilic esophagitis; Behcet S.)
5. Metastasis or direct spread from adjacent malignancy
6. Neoplasm, other (esp. gastrointestinal stromal tumor—leiomyoma; leiomyosarcoma); lipoma
7. Postoperative (fundoplication; repair of hiatal hernia or esophageal atresia)
8. Reflux esophagitis (incl. Zollinger-Ellison S.; post-gastrectomy alkaline reflux esophagitis)
9. Varices

UNCOMMON

1. Barrett esophagus
2. Benign mucous membrane pemphigoid
3. Chronic granulomatous disease of childhood
4. Crohn's disease
5. Epidermolysis bullosa
6. Hemorrhage or hematoma involving esophagus
7. [Hiatal hernia (esp. with short esophagus)]
8. Intramural esophageal pseudodiverticulosis
9. Lymphoma^g
10. Papillomatosis of esophagus
11. Peptic esophageal ulcer with edema
12. Tylosis (keratosis palmaris et plantaris familiaris)

Gamut G-14

ESOPHAGEAL ULCERATION(S)

COMMON

1. Barrett esophagus
2. Carcinoma of esophagus
3. Corrosive esophagitis
4. Drug-induced esophagitis (eg, potassium chloride; tetracycline; quinidine; ascorbic acid; ferrous sulfate; bromide)
5. Intubation esophagitis
6. Opportunistic esophagitis (esp. *Candida*; herpes; cytomegalovirus)
7. Reflux or peptic esophagitis (eg, hiatal hernia; vomiting; chalasia; scleroderma; pregnancy; surgery)

UNCOMMON

1. Alcoholic esophagitis, acute
2. Behçet syndrome
3. Benign mucous pemphigoid
4. Eosinophilic esophagitis
5. Epidermolysis bullosa
6. Granulomatous esophagitis (eg, tuberculosis; histoplasmosis; syphilis; Crohn's disease)
7. Human immunodeficiency virus (HIV) infection
8. [Intramural esophageal pseudodiverticulosis]
9. Lymphoma_g
10. Metastasis
11. Radiation esophagitis
12. Sclerotherapy of esophageal varices

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-16**WIDESPREAD IRREGULAR OR NODULAR ESOPHAGEAL MUCOSA****COMMON**

1. [Artifacts (esp. air bubbles)]
2. Corrosive esophagitis
3. Glycogenic acanthosis
4. Intubation esophagitis
5. Opportunistic esophagitis (eg, *Candida*; herpes; cytomegalovirus)
6. Peptic esophagitis (incl. Barrett type)
7. Reflux esophagitis (eg, hiatal hernia; chalasia; scleroderma)
8. Varices

UNCOMMON

1. Acanthosis nigricans
2. Behçet S.
3. Carcinoma, superficial spreading type
4. Cowden S. (multiple hamartoma S.)
5. Crohn's disease
6. Diverticulosis, intramural; pseudodiverticulosis
7. Ectopic sebaceous glands
8. Eosinophilic esophagitis
9. Epidermolysis bullosa
10. Esophagitis cystica
11. [Feline esophagus]
12. Granulomatous esophagitis (eg, tuberculosis; histoplasmosis; syphilis)
13. Hirsute esophagus ("skin tube" esophagus created during reconstructive surgery of pharynx and esophagus)
14. Leukoplakia
15. Lymph follicles
16. Lymphoma_g
17. Papillomatosis of esophagus
18. Pemphigus; bullous pemphigoid
19. Radiation esophagitis
20. Scleroderma

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-19**ESOPHAGEAL LESION IN A CHILD****COMMON**

1. Atresia
2. Chalasia (infantile gastroesophageal regurgitation)
3. Duplication cyst (enteric; neureneric; bronchogenic)

Gamut G-20

ABNORMAL POSITION OF THE STOMACH (ROTATION OR DISPLACEMENT)

COMMON

1. Cascade stomach
2. Displacement by enlarged adjacent organ (eg, liver; spleen; left kidney; pancreas; aorta) or by adjacent mass, or lesser sac abscess or hernia
3. Eventration or paralysis of left hemidiaphragm
4. Hernia (eg, hiatal; paraesophageal; Morgagni; Bochdalek; traumatic; intrapericardial)
5. Inversion of left hemidiaphragm (pleural effusion; thoracic mass)
6. Obesity; emphysema (anterior displacement)

UNCOMMON

1. Absent hemidiaphragm
2. "Upside-down" stomach
3. Volvulus (organoxial or mesenteroaxial)

FILLING DEFECT(S) IN THE STOMACH (INTRALUMINAL, MUCOSAL, OR INTRAMURAL)

COMMON

- *1. Adenomatous polyp (eg, in chronic atrophic gastritis; familial polyposis of colon; Cronkhite-Canada S.)
- *2. [Areæ gastricae]

3. Bezoar
- *4. Blood clot; intramural hematoma
5. Carcinoma
6. Ectopic pancreas
7. [Extrinsic mass (eg, from spleen, liver, pancreas, kidney, colon)]
- *8. Foreign body (eg, coin)
9. Giant rugal fold; hypertrophied prepyloric antral fold
- *10. Hyperplastic polyp
- *11. Leiomyoma, other gastrointestinal stromal tumor
- *12. Lymphoma^g
- *13. Metastasis (esp. melanoma; Kaposi sarcoma; carcinoma of lung or breast)
- *14. Neoplasm, other (eg, carcinoid; tubular adenoma; angioma; lipoma; villous adenoma; plasmacytoma)
- *15. Peptic ulcer
16. Postoperative defect (eg, suture granuloma; fundoplication)
17. Sarcoma (esp. leiomyosarcoma)
- *18. Varix

UNCOMMON

- *1. Amyloidosis
- *2. Candidiasis
3. [Double pylorus]
4. Duplication cyst
- *5. Fundic gland polyposis
6. Gallstone
7. Granuloma with eosinophils (inflammatory fibroid polyp)
- *8. Hamartoma (eg, Peutz-Jeghers S. (alimentary tract polyposis); Cowden S. (multiple hamartoma S.); Ruvalcaba-Myhre-Smith S.)
9. Jejunogastric intussusception
- *10. Lymphoid hyperplasia; pseudolymphoma
- *11. Parasites (esp. *Ascaris*; *Anisakis*)
12. Prolapse of esophageal mucosa
- *13. Thickened folds simulating nodules or filling defects (eg, Ménétrier's disease; Crohn's disease;

tuberculosis; sarcoidosis; eosinophilic gastritis)
(See G-26)

14. Tumefactive extramedullary hematopoiesis

* May be multiple.

[] This condition does not actually cause the gamutted imaging finding, but can produce imaging changes that simulate it.

FILLING DEFECT IN A GASTRIC REMNANT

COMMON

- Bezoar
- Postoperative deformity or defect (eg, suture granuloma; scar; prolapse; mural inversion)
- Ulcer (esp. marginal ulcer)

UNCOMMON

- Carcinoma (recurrent; gastric stump)
- Gastritis, postoperative (incl. bile reflux gastritis)
- Gastrojejunal mucosal prolapse (antegrade prolapse into efferent or afferent loop)
- Jejunogastric intussusception (usually efferent loop in Billroth II anastomosis)

- Lymphoma (gastric stump)
- Polyp_g (esp. hyperplastic)

References

Gamut G-23

LESION INVOLVING THE GASTRIC FUNDUS (INTRINSIC OR EXTRINSIC)

COMMON

- Bezoar
- Carcinoma of stomach (adenocarcinoma) or esophagus (squamous cell)
- Diverticulum of fundus
- Extragastric malignancy (eg, carcinoma of tail or body of pancreas or splenic flexure of colon; liver, kidney, or adrenal neoplasm; lymphoma_g or metastases involving adjacent nodes)
- Extrinsic pressure from normal or enlarged structure (eg, liver; spleen; splenic flexure of colon; left kidney; heart; aortic aneurysm)
- Giant rugal folds (incl. Ménétrier's disease)
- Hiatal hernia with esophagogastric herniation
- Leiomyoma; neurofibroma; other gastrointestinal stromal tumor_g; lipoma
- Lymphoma_g
- Peptic ulcer
- Polyp_g (esp. hyperplastic or adenomatous)
- Postsurgical deformity (eg, Nissen repair of hiatal hernia with fundoplication; postsplenectomy)
- Varices (eg, cirrhosis; schistosomiasis); portal hypertensive gastropathy

(continued)

UNCOMMON

1. Hematoma, intramural or extrinsic
2. Sarcoma (esp. leiomyosarcoma)
3. Splenosis following splenectomy
4. Subphrenic abscess

References

1. Chang R, Levine MS, Ginsberg GG, et al: Portal hypertensive gastropathy: radiographic findings in eight patients. *AJR* 2000;175:1609–1612

Gamut G-24**GASTRIC ULCERATION****COMMON**

1. Carcinoma of stomach
- *2. Gastritis (eg, alcohol; aspirin; anti-inflammatory drugs)
3. Lymphoma_g
4. Marginal ulcer (postsubtotal gastrectomy)
5. Peptic ulcer

UNCOMMON

1. [Ectopic pancreas (duct)]
2. Carcinoid
3. Chemotherapy (hepatic arterial infusion)
4. Corrosive gastritis
- *5. Crohn's disease
6. *Cryptosporidium* antritis
7. Eosinophilic gastritis
8. Kaposi sarcoma
9. Ménétrier's disease (giant hypertrophic gastritis)
10. Metastasis (often bull's-eye lesion, esp. melanoma)
(See G-105)
11. Pseudolymphoma

12. Radiation therapy
13. Gastrointestinal stromal tumor_g, benign or malignant (esp. leiomyoma; leiomyosarcoma; neurofibroma)
14. Suture line ulceration (esp. after gastric surgery for morbid obesity)
15. Tuberculosis

* May cause aphthoid ulcerations.

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-25**EROSIVE GASTRITIS*****COMMON**

1. Acute gastritis (eg, alcohol abuse)
2. Crohn's disease
3. Drugs (eg, aspirin; NSAID; steroids)
4. *Helicobacter pylori* infection
5. Idiopathic
6. [Normal areae gastricae]
7. Peptic ulcer; hyperacidity

UNCOMMON

1. Corrosive gastritis
2. *Cryptosporidium* antritis
3. [Lymphoma]
4. Opportunistic infection (eg, candidiasis; herpes simplex; cytomegalovirus)
5. Postoperative gastritis

6. Radiation therapy
7. Zollinger-Ellison S.; multiple endocrine neoplasia (MEN) S.

* Superficial erosions or aphthoid ulcerations seen especially with double contrast technique.

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-26

LARGE GASTRIC FOLDS (LOCAL OR WIDESPREAD); ALSO THICKENING OF THE STOMACH WALL ON CT, US, OR MRI

COMMON

1. Carcinoma
2. Gastritis (esp. hypertrophic; alcoholic; antral; *Helicobacter pylori*)
3. Lymphoma_g
4. Ménétrier's disease (giant hypertrophic gastritis)
5. Normal variant (hyperrugosity of fundus and greater curvature)
6. Pancreatitis, acute
7. Peptic ulcer disease; hyperacidity
8. Postoperative stomach
9. Varices (eg, cirrhosis; schistosomiasis); portal hypertensive gastropathy

UNCOMMON

1. Amyloidosis
2. Diffuse cystic gastric disease

3. Drug related gastritis (eg, aspirin; NSAID); chemotherapy toxicity
4. [Food retention]
5. Gastritis, other (eg, eosinophilic, corrosive, phlegmonous, or postradiation)
6. Granulomatous infiltration of stomach wall (eg, Crohn's disease; sarcoidosis; tuberculosis; histoplasmosis; actinomycosis; syphilis)
7. Infectious gastritis, other (eg, botulism; dysentery; diphtheria; candidiasis, cryptosporidiosis or cytomegalovirus—esp. in AIDS)
8. Metastasis; extension from carcinoma of pancreas
9. Neoplasm, other (eg, gastrointestinal stromal tumor—esp. leiomyoma, leiomyosarcoma; carcinoid; Kaposi sarcoma)
10. Parasitic disease (esp. strongyloidiasis; anisakiasis; schistosomiasis with varices)
11. Polyposis of stomach (See G-21, G-106)
12. Pseudolymphoma
13. Zollinger-Ellison S.; multiple endocrine neoplasia (MEN) S. (See J-5)

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-27**LINITIS PLASTICA PATTERN OF THE STOMACH (See G-28)****COMMON**

1. Carcinoma of stomach
2. Peptic ulcer (acute ulcer with spasm; chronic ulcer with fibrosis)
3. Stenosing antral gastritis

UNCOMMON

1. Amyloidosis
2. Chemotherapy (hepatic arterial infusion)
3. Corrosive gastritis (esp. acids; ferrous sulfate)
4. Eosinophilic gastritis
5. [Extrinsic mass compressing stomach (esp. marked hepatomegaly)]
6. Granulomatous infiltration of stomach wall (eg, Crohn's disease; sarcoidosis; tuberculosis; histoplasmosis; actinomycosis; syphilis)
7. Idiopathic gastritis
8. Intramural gastric hematoma
9. Lymphoma_g (esp. Hodgkin's disease and non-Hodgkin's lymphoma)
10. Metastasis (esp. breast carcinoma); direct extension from carcinoma of pancreas or transverse colon; omental "cakes"
11. Opportunistic infection, esp. in AIDS (eg, cytomegalovirus; *Cryptosporidium* gastritis)
12. Parasitic disease (eg, strongyloidiasis; schistosomiasis)
13. Perigastric adhesions
14. Phlegmonous gastritis
15. Postoperative (eg, gastroplasty)
16. Postradiation or postfreezing gastritis
17. Pseudolymphoma

[] This condition does not actually cause the gamutted imaging finding, but can produce imaging changes that simulate it.

Gamut G-28**NARROWING OR DEFORMITY OF THE GASTRIC ANTRUM (See G-27)****COMMON**

1. Antral gastritis
2. Carcinoma of stomach
3. Hypertrophic pyloric stenosis (infantile, adult)
4. Pancreatitis; carcinoma of pancreas; pseudocyst
5. Peptic ulcer scarring
6. Prolapse of gastric mucosa or polyp_g
7. Pylorospasm

UNCOMMON

1. Aberrant pancreatic tissue
2. Adhesions
3. Amyloidosis
4. Antral diaphragm or web
5. Congenital peritoneal bands (Ladd's bands)
6. Corrosive gastritis
7. *Cryptosporidium* antritis
8. Duplication cyst of stomach
9. Eosinophilic gastritis
10. Gastroenterostomy
11. Granulomatous disease of infancy (neutrophil dysfunction)

12. Granulomatous infiltration of stomach wall (eg, Crohn's disease; sarcoidosis; tuberculosis; histoplasmosis; actinomycosis; syphilis)
13. Lymphoma_g
14. Metastasis

Gamut G-29

COMBINED GASTRIC ANTRAL AND DUODENAL DISEASE

COMMON

1. Carcinoma of stomach extending to involve duodenum
2. Involvement of stomach and duodenum from adjacent malignancy (esp. carcinoma of pancreas) or pancreatitis
3. Lymphoma_g
4. Peptic ulcer disease (incl. Zollinger-Ellison S.)
5. Prolapse of gastric mucosa, inflamed antral-pyloric fold, or polyp_g into duodenal bulb

UNCOMMON

1. Crohn's disease
2. Eosinophilic gastroenteritis
3. Ménétrier's disease

4. Parasitic disease (eg, strongyloidiasis; schistosomiasis)
5. Tuberculosis

Reference

1. Eisenberg RL: Gastrointestinal Radiology: A Pattern Approach. (ed 3) Philadelphia: Lippincott 1996, pp 324–328

Gamut G-30

GASTRIC OUTLET OBSTRUCTION

COMMON

1. Extrinsic compression (eg, pancreatic, renal, retroperitoneal, duodenal, or colonic lesion)
2. Neoplasm, esp. malignant (eg, carcinoma of gastric antrum or head of pancreas; lymphoma_g)
3. Peptic ulcer disease (eg, antral, pyloric, or duodenal)
4. [Physiologic (eg, gastric atony with poor peristalsis and emptying; post-drug therapy; gastric distention)] (See G-31)
5. Prepyloric inflammation, scarring or stricture (eg, corrosive gastritis; Crohn's disease; tuberculosis; sarcoidosis; syphilis; amyloidosis)
6. Pyloric hypertrophy, adult or infantile (hypertrophic pyloric stenosis)
7. Pylorospasm

UNCOMMON

1. Annular pancreas
2. Bezoar
3. Diaphragm or web, antral or duodenal
4. Gastric duplication
5. Hematoma, intramural
6. Intussusception, gastroduodenal
7. Pancreatitis; cholecystitis

(continued)

8. Prolapsed antral mucosa or polyp_g
 9. [Proximal small bowel obstruction]
 10. Volvulus (with or without hiatal hernia)
- [] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

References

Gamut G-31**DILATATION OF THE STOMACH
WITHOUT OBSTRUCTION****COMMON**

1. Aerophagia; emotional distress; hyperventilation; crying
2. Carbonated beverages; bicarbonate of soda; double contrast; gas pills
3. Coma (uremic or hepatic)
4. Diabetic gastropathy (gastric paresis)
5. Drug therapy (eg, Atropine; morphine; ganglion-blocking agent; Pro-Banthine)
6. Gastritis, acute
7. Iatrogenic (intubation; oxygen tube in esophagus)
8. Immobilization (eg, body cast; paraplegia)
9. Inflammation, acute (eg, pancreatitis; cholecystitis; subphrenic abscess; septicemia)
10. Pain (eg, colic due to renal, ureteral, or biliary stone; porphyria; lead poisoning; sickle cell crisis; migraine)
11. Peritonitis (eg, perforated appendix or peptic ulcer)
12. Postoperative, recent (incl. vagotomy)
13. Small bowel obstruction, proximal
14. Traumatic gastric ileus (eg, spine fracture; ruptured spleen; retroperitoneal hematoma; renal injury)

UNCOMMON

1. Chagas' disease
2. Electrolyte or acid-base imbalance (eg, hypercalcemia; hypocalcemia; hypokalemia; uremia; insulin shock; diabetic ketoacidosis)
3. Idiopathic
4. Muscular disorder_g (esp. muscular dystrophy)
5. Myxedema (hypothyroidism)
6. Neurologic disorder_g (eg, brain tumor; cerebral palsy; bulbar poliomyelitis; tabes dorsalis)
7. Scleroderma; dermatomyositis
8. Tracheoesophageal fistula with esophageal atresia

Gamut G-32**INTERSTITIAL EMPHYSEMA
OF THE STOMACH****COMMON**

1. Emphysematous or phlegmonous gastritis (gas-forming organism, esp. in diabetic or alcoholic)
2. Traumatic or iatrogenic emphysema (eg, gastroscopy; intubation; recent surgery; respiratory therapy—esp. PEEP)

UNCOMMON

1. Corrosive gastritis
2. Distention of stomach (eg, bicarbonate of soda; oxygen tube in esophagus) (See G-31)
3. Gastric outlet obstruction (eg, malignancy; volvulus; prepyloric inflammation or stricture) (See G-30)
4. Ischemic gastritis; infarction

5. Necrotizing gastroenterocolitis
6. Peptic ulcer with intramural perforation
7. Perforated appendicitis
8. Pneumatosis cystoides
9. Pneumomediastinum (eg, from emphysema or asthma)

Gamut G-33

GASTROCOLIC OR GASTRODUODENOCOLIC FISTULA

COMMON

1. Carcinoma of colon, stomach, pancreas, or kidney
2. Pancreatitis; pancreatic abscess
3. Peptic ulcer, perforated (incl. aspirin or NSAID-induced greater curvature ulcer)
4. Postoperative (eg, gastrostomy; retained sponge)
5. Trauma with gastric, duodenal, or colonic perforation

UNCOMMON

1. Actinomycosis
2. Amebic colitis
3. Biliary tract perforation (eg, calculus)
4. Crohn's disease
5. Diverticulum, perforated (eg, colonic, duodenal)
6. Foreign body
7. Idiopathic
8. Lymphoma_g
9. Marginal ulcer
10. Metastatic disease

11. Tuberculosis
12. Typhoid fever

Gamut G-34

INCREASED RETROGASTRIC OR RETRODUODENAL SPACE

COMMON

1. Ascites
2. Hepatomegaly, marked (esp. caudate lobe)
3. Normal variant
4. Obesity
5. Pancreatic mass (esp. carcinoma; pancreatitis; abscess; pseudocyst; cystadenoma) (See G-213, 214)
6. Renal or adrenal mass (eg, renal cell carcinoma (hypernephroma); renal cyst; hydronephrosis; adenoma or carcinoma of adrenal gland; pheochromocytoma; neuroblastoma; Wilms' tumor; perinephric abscess or hematoma) (See H-38–44, H-118)
7. Retroperitoneal mass (eg, sarcoma; lymphoma_g; metastasis; lymphadenopathy; tuberculosis; cyst; abscess; hematoma)

UNCOMMON

1. Aortic aneurysm
2. Choledochal cyst
3. Gastrointestinal stromal tumor_g of posterior wall of stomach (esp. leiomyoma; leiomyosarcoma)
4. Herniation of omentum (eg, Morgagni hernia)

(continued)

5. Postoperative
6. Retroperitoneal edema, cellulitis, urinary leakage
7. Retroperitoneal fibrosis

Reference

1. Eisenberg RL: Gastrointestinal Radiology: A Pattern Approach (ed 3). Philadelphia: Lippincott, 1996, pp 317–319

Gamut G-35**EXTRINSIC INDENTATION
ON THE DUODENUM (See G-36)****COMMON**

1. Coloduodenal apposition
2. Colon lesion (esp. carcinoma of hepatic flexure or transverse colon; amebic pericolic abscess or ameboma)
3. Common duct dilatation or neoplasm (See G-130, G-134)
4. Duodenal diverticulitis or abscess (esp. with giant duodenal diverticulum)
5. Gallbladder, normal or enlarged (eg, hydrops; carcinoma; “Courvoisier gallbladder”)
6. Hematoma, intramural or mesenteric
7. Hepatic enlargement (esp. caudate lobe) (eg, liver abscess; hepatocellular carcinoma {hepatoma} (See G-141))
8. Renal or adrenal mass (eg, renal cell carcinoma {hypernephroma}; renal cyst; hydronephrosis; adenoma or carcinoma of adrenal gland; pheochromocytoma; neuroblastoma; Wilms' tumor; perinephric abscess or hematoma) (See H-38–44, 118)
9. Lymph node enlargement (eg, metastasis; lymphoma; tuberculosis)
10. Pancreatic mass (eg, carcinoma; pseudocyst; pancreatitis; abscess; annular pancreas) (See G-213, 214)
11. Papilla of Vater enlargement (See G-138)
12. [Postbulbar peptic ulcer]

13. Retroperitoneal mass (eg, sarcoma; lymphadenopathy; abscess; cyst)
14. Superior mesenteric artery compression (See G-44)

UNCOMMON

1. Aortic aneurysm
2. Choledochal cyst
3. Congenital peritoneal bands (Ladd's bands)
4. Gastric neoplasm (esp. leiomyosarcoma; carcinoma)
5. Idiopathic
6. Mesenteric or celiac artery collaterals
7. Pericholecystic abscess
8. Varices, duodenal or retroperitoneal

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Reference

Gamut G-36**WIDENING OF THE DUODENAL
C-LOOP (See G-35)****COMMON**

1. Normal variant
2. Pancreatic mass (eg, acute or chronic pancreatitis; abscess; pseudocyst; carcinoma; cystadenoma; cystadenocarcinoma) (See G-213, 214)

UNCOMMON

1. Aortic aneurysm
2. Choledochal cyst
3. Duodenal diverticulitis
4. Duodenal hematoma
5. Gastrointestinal stromal tumor of duodenum (esp. leiomyosarcoma)
6. Mesenteric or celiac artery collaterals

7. Mesenteric or omental mass (eg, metastasis; hematoma; cystic lymphangioma)
8. Neoplasm of stomach, colon, or kidney (esp. with spread to head of pancreas)
9. Parasitic disease (eg, strongyloidiasis; amebiasis with pericolic abscess)
10. Retroperitoneal lymphadenopathy (eg, metastasis; lymphoma_g; tuberculosis; sarcoidosis)
11. Retroperitoneal cyst or neoplasm, primary or metastatic
12. Cyst (eg, duplication; choledochal—choledochocele)
13. Foreign body in lumen (eg, fruit pit)
14. Gallstone impaction at papilla
15. Intraluminal diverticulum
16. Intramural hematoma
17. Intussusception, gastroduodenal
18. Lymphoma_g
19. Mesenteric or celiac artery collateral
20. Parasite (eg, *Ascaris*)
21. Postoperative defect; stitch abscess; prolapsed gastrostomy tube
22. Sarcoma (gastrointestinal stromal tumor_g, esp. leiomyosarcoma; Kaposi sarcoma)
23. Varix

Reference

Gamut G-37

SOLITARY INTRINSIC DUODENAL MASS

COMMON

1. Ectopic pancreas
2. Metastasis (esp. hypernephroma; melanoma)
3. Neoplasm, primary (Brunner's gland adenoma; leiomyoma; neurofibroma; lipoma; myxoma; hamartoma; hemangioma; lymphangioma; islet cell tumor; carcinoid; villous adenoma)
4. Normal variant (eg, redundant duodenal fold; flexure "defect"; normal papilla of Vater)
5. Pancreatic lesion, attached or invading (esp. carcinoma of pancreas; pancreatitis; pseudocyst) (See G-213, 214)
6. Papilla of Vater enlargement (See G-138)
7. Peptic ulcer with edema or deformity
8. Polyp_g
9. Prolapsed gastric mucosa or polyp

UNCOMMON

1. Abscess, juxtaduodenal
2. Blood clot
3. Carcinoma of duodenum or ampulla

References

1. Eisenberg RL: Gastrointestinal Radiology: A Pattern Approach. (ed 3) Philadelphia: Lippincott, 1996, pp 370–396

Gamut G-38

MULTIPLE OR DIFFUSE FILLING DEFECTS IN THE DUODENUM

COMMON

1. Brunner's gland hyperplasia
2. Heterotopic gastric mucosa
3. Metastases (esp. malignant melanoma)
4. Nodular, thickened, or edematous folds (incl. nonerosive duodenitis) (See G-40)
5. Prolapsed gastric mucosa

UNCOMMON

1. Ascariasis
2. Blood clots
3. Crohn's disease (cobblestone pattern)
4. Cronkhite-Canada S.
5. Foreign bodies in lumen (eg, fruit pits)
6. Lymphoma_g; Kaposi sarcoma; other bull's-eye lesions (See G-105)
7. Mastocytosis
8. Mesenteric or celiac artery collaterals
9. Nodular lymphoid hyperplasia (esp. in dysgamma-globulinemia)
10. Polyps_g (adenomatous or hamartomatous)
11. Varices

Gamut G-39

DIMINISHED OR ABSENT FOLD PATTERN IN THE DUODENUM AND SMALL BOWEL

COMMON

1. Crohn's disease
2. Scleroderma
3. Small bowel obstruction or ileus
4. Sprue

UNCOMMON

1. Amyloidosis
2. Cystic fibrosis (mucoviscidosis)
3. Strongyloidiasis, chronic

Gamut G-40

NODULAR OR THICKENED FOLDS IN THE DUODENUM; ALSO THICKENING OF THE DUODENAL WALL ON CT, US, OR MRI

COMMON

1. Brunner's gland hyperplasia
2. Cystic fibrosis (mucoviscidosis)
3. Duodenitis
4. Edema (eg, hypoproteinemia; cirrhosis; nephrotic S.; uremia; chronic dialysis; angioneurotic edema; heart failure)
5. Metastatic disease or direct invasion from adjacent neoplasm (esp. carcinoma of pancreas, stomach, or colon)
6. Normal variant
7. Pancreatitis, acute or chronic
8. Parasitic disease (esp. giardiasis; strongyloidiasis; hookworm disease; intestinal capillariasis)
9. Peptic ulcer disease
10. Zollinger-Ellison S.; multiple endocrine neoplasia (MEN) S. (See J-5)

UNCOMMON

1. AIDS-related infection (eg, *Cryptosporidium*; cytomegalovirus; atypical mycobacterial infection) or neoplasm (eg, Kaposi sarcoma; lymphoma_g)
2. Amyloidosis
3. Cholecystitis
4. Corrosive disease
5. Crohn's disease
6. Cronkhite-Canada S.
7. Drug therapy (eg, Pro-Banthine); chemotherapy toxicity
8. Duodenal diverticulitis
9. Ectopic gastric mucosa
10. Eosinophilic enteritis
11. Intestinal lymphangiectasia
12. Intramural hemorrhage (eg, trauma; hemophilia or other bleeding disorder_g; anticoagulant therapy)

13. Ischemia; vasculitis (eg, connective tissue disease (collagen vascular disease)_g; Henoch-Schönlein purpura)
14. Neoplasm, primary (eg, carcinoma; lymphoma_g; Kaposi sarcoma; gastrointestinal stromal tumor_g—esp. leiomyoma, leiomyosarcoma, or neurofibroma; lipoma; carcinoid)
15. Mastocytosis
16. Ménétrier's disease
17. Mesenteric or celiac artery collaterals following occlusion of main trunks
18. Nodular lymphoid hyperplasia (esp. in dysgamma-globulinemia)
19. Postoperative
20. Radiation injury, acute or chronic
21. Sprue; celiac disease
22. Tuberculosis
23. Varices
24. Whipple's disease

Gamut G-41

POSTBULBAR DUODENAL ULCERATION

COMMON

1. [Diverticulum]
2. Neoplasm, malignant, extrinsic (eg, invasion from pancreas, colon, right kidney, or gallbladder)
3. Peptic ulcer
4. Zollinger-Ellison S.

UNCOMMON

1. Aorticoduodenal fistula (esp. aortic graft)
2. Carcinoma of duodenum
3. Ectopic pancreas
4. Fistula, duodenocolic or other (See G-107)
5. Gastrointestinal stromal tumor_g (esp. leiomyoma; leiomyosarcoma; neurofibroma)
6. Granulomatous disease (eg, Crohn's disease; tuberculosis)
7. Intramural duodenal pseudodiverticulosis
8. Lymphoma_g
9. Metastasis (eg, melanoma; Kaposi sarcoma)
10. Parasitic disease (eg, strongyloidiasis)

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it

Gamut G-42

DUODENAL NARROWING OR OBSTRUCTION (See G-43, 44)

COMMON

1. Congenital atresia, esp. with trisomy 21 S.
(Down S.), stenosis, diaphragm or web
2. Extrinsic mass (eg, mesenteric or para-aortic lymphadenopathy; invasive neoplasm from pancreas, kidney, or colon; aortic aneurysm; choledochal cyst)
3. Pancreatitis, acute or chronic; pseudocyst
4. Postbulbar duodenal ulcer or scar
5. Superior mesenteric artery syndrome (See G-44)

UNCOMMON

1. Adhesions
2. Annular pancreas
3. Aortoduodenal fistula
4. Cholecystitis
5. Congenital peritoneal bands (Ladd's bands)
6. Duplication cyst
7. Gallstone impaction
8. Hematoma (intramural or extrinsic)
9. Inflammatory disease of duodenum (eg, Crohn's disease; tuberculosis; strongyloidiasis; giardiasis with spasm)
10. Internal hernia (eg, paraduodenal)
11. Intraluminal diverticulum
12. Midgut volvulus with malrotation
13. Neoplasm of duodenum, primary (esp. carcinoma; leiomyosarcoma) or metastatic; also Burkitt lymphoma
14. Preduodenal portal vein
15. Prolapsed gastric lesion (eg, polyp_g)
16. Pseudo-obstruction, idiopathic
17. Stricture (eg, traumatic; radiation)

Gamut G-43

DUODENAL OBSTRUCTION IN AN INFANT (DOUBLE BUBBLE SIGN)

COMMON

1. Annular pancreas
2. Congenital peritoneal bands (Ladd's bands)
3. Duodenal atresia or stenosis, esp. with trisomy 21 S.
(Down S.)
4. Midgut volvulus with malrotation

UNCOMMON

1. Choledochal cyst
2. Diaphragm or web; intraluminal diverticulum
3. Duplication cyst
4. Intramural hematoma
5. Preduodenal portal vein
6. Retroperitoneal tumor (eg, teratoma) or lymphadenopathy

Gamut G-44

**SUPERIOR MESENTERIC
ARTERY SYNDROME
(BAND-LIKE CONSTRICKTION OF
TRANSVERSE DUODENUM)**

COMMON

1. Immobilization or prolonged bed rest (eg, post-surgery; severe burn; body cast)
2. Normal variant
3. Pancreatic mass; pancreatitis
4. Scleroderma; dermatomyositis; lupus erythematosus
5. Severe weight loss with loss of retroperitoneal fat

UNCOMMON

1. Adhesions; congenital peritoneal bands (Ladd's bands)
2. Aortic aneurysm; postrepair aortoduodenal fistula
3. Chronic idiopathic intestinal pseudo-obstruction
4. Internal hernia, paraduodenal
5. Loss of abdominal muscle tone (eg, multiple pregnancies)
6. Retroperitoneal inflammatory or neoplastic disease
7. Small vascular (aortomesenteric) angle
8. Thickening of root of mesentery (eg, Crohn's disease; pancreatitis; tuberculosis; metastatic disease; other lymphadenopathy)

**DUODENAL DILATATION
WITHOUT OBSTRUCTION**

COMMON

1. Drug therapy (eg, Pro-Banthine; atropine; morphine; Lomotil)
2. Idiopathic
3. Ileus, localized (eg, acute pancreatitis; cholecystitis; peptic ulcer disease; severe trauma or burn)
4. Immobilization (eg, body cast; burn; paraplegia)
5. Normal variant
6. Postoperative (incl. vagotomy)
7. Scleroderma; dermatomyositis; lupus erythematosus

UNCOMMON

1. Chagas' disease (aganglionosis)
2. Diabetes (incl. acidosis; coma; insulin shock)
3. Emotional state alteration; hyperventilation; aerophagia
4. Pain (eg, lead colic; tabetic crisis; porphyria)
5. Sprue; other malabsorption syndromes
6. Thiamine deficiency neuropathy
7. Zollinger-Ellison S.

Reference

Gamut G-46

**ABNORMAL POSITION OF SMALL
BOWEL LOOPS**

COMMON

1. Anterior abdominal hernia (eg, umbilical; ventral; postoperative incisional)
2. Inguinal or femoral hernia

(continued)

3. Lesser sac hernia
4. Malrotation (incl. midgut volvulus)
5. Paroduodenal hernia (right or esp. left)

UNCOMMON

1. Diaphragmatic hernia
2. Internal hernias (pericecal; small bowel mesentery; sigmoid mesentery; pelvic [broad ligament])
3. Obturator hernia (esp. on right)
4. Omphalocele; Cantrell S.
5. Spigelian hernia

Gamut G-47**SEPARATION OR DISPLACEMENT OF SMALL BOWEL LOOPS****COMMON**

1. Abscess, intraperitoneal (eg, appendiceal; diverticular; interloop)
2. Adhesions
3. Ascites or other peritoneal fluid (eg, cirrhosis; congestive heart failure; peritoneal carcinomatosis)
4. Bladder enlargement
5. Crohn's disease
6. Intestinal neoplasm, primary (eg, carcinoid or carcinoma of small bowel)
7. Lymphadenopathy in mesentery or retroperitoneum
8. Mesenteric mass (eg, cyst; leiomyosarcoma; lipomatosis; lymphangioma) (See G-228, 229)
9. Metastatic disease to mesentery, bowel, peritoneum, or retroperitoneal nodes
10. Neoplasm or cyst in abdomen, pelvis or retroperitoneum, other (eg, gastrointestinal stromal tumor_g;

ovarian cyst or tumor; retroperitoneal sarcoma; renal mass; pancreatic pseudocyst; hydatid cyst; mesothelioma; plexiform neurofibroma)

11. Peritonitis (eg, bacterial; tuberculous; typhoid fever)
12. Postoperative (eg, resection)

UNCOMMON

1. Amyloidosis
2. Graft-versus-host disease
3. Hematoma or hemorrhage (trauma or bleeding disorder_g involving abdominal wall, mesentery, or bowel wall)
4. Hernia (internal; retroperitoneal)
5. Lymphoma_g
6. Mesenteric infarction
7. Mesenteritis (eg, retractile); Weber-Christian disease
8. Radiation enteritis
9. Tuberculosis
10. Whipple's disease

Gamut G-48**SOLITARY MASS IN THE SMALL BOWEL WITH PRESERVED MUCOSA****COMMON**

1. Benign neoplasm (eg, adenoma; angioma; hamartoma; lipoma; leiomyoma, neurofibroma or other gastrointestinal stromal tumor_g)
2. Carcinoid (esp. in ileum)
3. Food particle; fruit pit; bezoar; enterolith; pill; foreign body
4. Polyp_g (eg, adenomatous; hamartomatous; inflammatory fibroid)

UNCOMMON

1. Carcinoma, early or atypical (usually destroys mucosa)
2. Cyst (eg, duplication)
3. Endometrial implant
4. Gallstone
5. Heterotopic gastric mucosa; ectopic pancreas
6. Intraluminal diverticulum
7. Intramural hematoma; blood clot
8. Inverted Meckel's diverticulum
9. Lymphoma_g
10. Meconium ileus (cystic fibrosis {mucoviscidosis})
11. Metastasis (esp. melanoma)
12. Parasite (eg, *Ascaris* bolus; tapeworm—*Taenia saginata* or *T. solium*; *Anisakis* with ileocecal phlegmon)
13. Sarcoma (eg, leiomyosarcoma; Kaposi sarcoma)
14. Varix

Gamut G-50**MULTIPLE INTRALUMINAL, MUCOSAL, OR INTRAMURAL FILLING DEFECTS IN THE SMALL BOWEL****COMMON**

1. Brunner's gland hyperplasia (duodenum)
2. Food particles; seeds; foreign bodies; pills
3. Meconium ileus (cystic fibrosis (mucoviscidosis))
4. Metastases (esp. melanoma; carcinoma of breast, lung, or ovary; Kaposi sarcoma)
5. Nodular lymphoid hyperplasia (esp. in dysgamma-globulinemia)
6. Parasites (ascariids; tapeworms—*Taenia saginata*)
7. Polypsis syndromes (esp. Peutz-Jeghers S.; Gardner S.; Cronkhite-Canada S.,) (See G-106)

(continued)

UNCOMMON

1. Amyloidosis
2. Behcet S.
3. Benign neoplasms (eg, hemangiomas; lipomas; leiomyomas, neurofibromas and other gastrointestinal stromal tumors)^g
4. Blood clots
5. Carcinoids
6. Crohn's disease (cobblestone pattern)
7. Gallstones
8. Hyperplastic Peyer's patches in ileum (typhoid fever)
9. Lymphoma^g
10. Mastocytosis (duodenum)
11. Varices

References

Gamut G-51-2**SMALL BOWEL
PSEUDODIVERTICULUM****COMMON**

1. Chronic duodenal ulcer disease with pseudo-diverticular outpouchings
2. Crohn's disease (pseudodiverticula; fistulae)

UNCOMMON

1. Communicating ileal duplication
2. [Giant duodenal ulcer]
3. Intraluminal duodenal diverticulum
4. [Lymphoma ("aneurysmal" dilatation)]
5. Scleroderma

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Reference

1. Eisenberg RL: Gastrointestinal Radiology: A Pattern Approach. (ed 3) Philadelphia: Lippincott, 1996, pp 541–551

Gamut G-51-1**SMALL BOWEL DIVERTICULUM****COMMON**

1. Duodenal diverticulum

UNCOMMON

1. Diverticulosis of small bowel (esp. jejunal diverticulosis)
2. Giant duodenal diverticulum
3. Jejunal diverticulum
4. Ileal diverticulum
5. Meckel's diverticulum

Reference

1. Eisenberg RL: Gastrointestinal Radiology: A Pattern Approach. (ed 3) Philadelphia: Lippincott, 1996, pp 541–551

Gamut G-52**THICKENING OF THE SMALL BOWEL
WALL, GENERALIZED OR LOCALIZED
(BARIUM, US, CT, MRI)****COMMON**

1. Crohn's disease
2. Edema (eg, heart failure; constrictive pericarditis; angioneurotic edema; portal hypertension)
3. Eosinophilic enteritis; amyloidosis (fold thickening may be regular in early stages of these diseases)
4. Hemorrhage, intramural (eg, trauma; anticoagulant therapy; hemophilia; other bleeding or clotting disorder^g; vasculitis; Henoch-Schönlein purpura)

5. Hypoproteinemia (eg, cirrhosis; Budd-Chiari S.; nephrosis; malnutrition; burn; dysproteinemia)
6. Intestinal lymphangiectasia, primary or secondary (eg, mesenteric neoplasm)
7. Ischemic bowel disease or infarction (eg, atherosclerosis; thromboembolism; vasculitis; polyarteritis nodosa; hypotension)
8. Metastatic disease (esp. malignant melanoma; carcinoma of breast, lung or ovary; Kaposi sarcoma)
9. Neoplasm, primary (eg, carcinoma; carcinoid; lipoma; gastrointestinal stromal tumor^g—leiomyoma; leiomyosarcoma)
10. Opportunistic infection, esp. in AIDS (eg, *Cryptosporidium*; *Campylobacter fetus [jejuni]*; *Candida*; *Mycobacterium avium-intracellulare*; cytomegalovirus)
11. Parasitic disease (giardiasis; strongyloidiasis; intestinal capillariasis; hookworm disease; schistosomiasis); terminal ileum—amebiasis; anisakiasis; angiostrongylasis costaricensis
12. Peptic ulcer; Zollinger-Ellison S.; multiple endocrine neoplasia (MEN) S. (See J-5)

UNCOMMON

1. A-beta-lipoproteinemia
2. Alpha chain disease
3. Amyloidosis
4. Behcet disease
5. Cystic fibrosis (mucoviscidosis)
6. Enterocolitis (eg, typhoid fever; *Yersinia*)
7. Eosinophilic enteritis
8. Graft-versus-host disease
9. Infections, other (eg, *E. coli*; *Vibrio*; histoplasmosis)
10. Interloop abscess
11. Intestinal lymphangiectasia, primary or secondary (eg, mesenteric neoplasm)
12. Lymphoma^g; leukemic infiltration; pseudo-lymphoma
13. Mastocytosis
14. Menetrier's disease (stomach and duodenum)
15. Pancreatitis
16. Radiation enteropathy, acute or chronic
17. Tuberculous enteritis or peritonitis

18. Waldenström's macroglobulinemia
19. Whipple's disease
20. Xanthomatosis

Gamut G-53

MUCOSAL DESTRUCTION OF THE SMALL BOWEL WITH OR WITHOUT STRicture (LOCAL OR WIDESPREAD)

COMMON

- *1. Crohn's disease; other nonspecific enteritis
- *2. Lymphoma^g

UNCOMMON

1. [Abscess, interloop]
2. [Adhesions]
- *3. Amyloidosis
4. Carcinoid
5. Carcinoma
- *6. Eosinophilic enteritis

(continued)

7. Fungus disease_g (eg, histoplasmosis; actinomycosis)
- *8. Mastocytosis
- *9. Metastatic disease (esp. from melanoma; carcinoma of breast, lung, ovary, uterus, pancreas, or GI tract)
10. [Pancreatitis]
- *11. Parasitic disease (giardiasis; strongyloidiasis; intestinal capillariasis; hookworm disease; schistosomiasis; also amebiasis, anisakiasis, angiostrongyliasis costaricensis in terminal ileum)
12. Potassium enteritis
- *13. Radiation enteritis
14. Sarcoma (eg, leiomyosarcoma; Kaposi sarcoma)
- *15. Scleroderma
- *16. Tuberculosis
17. Typhoid fever
18. Ulcerative colitis ("backwash ileitis")
19. Vascular occlusion; ischemia
20. *Yersinia* enterocolitis

* May be widespread.

Gamut G-57

MALABSORPTION PATTERN IN THE SMALL BOWEL

COMMON

1. Blind loop S. (See G-58)
2. Crohn's disease
3. Cystic fibrosis (mucoviscidosis)
4. Pancreatic disease (insufficiency; chronic pancreatitis; carcinoma; gastrinoma)

(continued)

5. Parasitic disease (giardiasis; hookworm disease; strongyloidiasis; schistosomiasis japonica; intestinal capillariasis)
6. Postoperative (eg, postgastrectomy steatorrhea; gastroileostomy; short bowel S.; pancreatectomy)
7. Sprue, tropical or nontropical (celiac disease)
8. Steatorrhea, idiopathic

UNCOMMON

1. A-beta-lipoproteinemia
2. Acrodermatitis enteropathica
3. Acute bacterial infection
4. AIDS
5. Allergy (eg, angioneurotic edema)
6. Amyloidosis
7. Bile duct obstruction
8. Carcinoid syndrome
9. Chronic granulomatous disease of childhood
10. Cronkhite-Canada S.
11. Diabetes
12. Disaccharidosis (eg, lactase deficiency)
13. Drug therapy (eg, antimetabolites)
14. Ehlers-Danlos S.
15. Emotional states; anorexia nervosa
16. Eosinophilic gastroenteritis
17. Fistula (See G-107)
18. Henoch-Schönlein purpura
19. Hepatobiliary disease (eg, biliary cirrhosis; biliary atresia)
20. Hypoparathyroidism
21. Hypopituitarism
22. Hypothyroidism (cretinism); hyperthyroidism
23. Immunologic disorder^g
24. Intestinal lymphangiectasia
25. Ischemia of intestine, chronic
26. Jejunal diverticulosis
27. Johanson-Blizzard S.
28. Lymphoma^g
29. Mastocytosis
30. Metastases, peritoneal
31. Multiple endocrine neoplasia (MEN) S. (eg, gastrinoma; pancreatic non-beta islet cell tumor (VIPoma) or hyperplasia) (See J-5)

32. Nephrotic syndrome
33. Nutritional deficiency (kwashiorkor; pellagra)
34. Protein-losing enteropathy
35. Radiation gastroenteritis
36. Scleroderma; dermatomyositis
37. Tuberculous peritonitis
38. Waldenström's macroglobulinemia; alpha chain disease
39. Whipple's disease
40. Wolman's disease (familial xanthomatosis)
41. Zollinger-Ellison S.

Gamut G-58**BLIND LOOP SYNDROME****COMMON**

1. Postoperative (eg, side-to-side anastomosis; gastro-ileostomy; bypass procedure; short bowel syndrome)
2. Small bowel stricture with proximal dilatation

UNCOMMON

1. Diverticulosis of small bowel (esp. jejunum)
2. Duplication of intestine
3. Meckel's diverticulum, large

4. Sluggish transit (eg, myxedema; cretinism; scleroderma)

SMALL BOWEL DILATATION WITH THICKENED MUCOSAL FOLD PATTERN

COMMON

1. Crohn's disease
2. Infectious enteritis, esp. in AIDS (eg, cryptosporidiosis; cytomegalovirus; *Candida*; *Salmonella*; *Mycobacterium avium-intracellulare*)
3. Mesenteric infarction (venous or embolic arterial) or advanced ischemia (atherosclerosis)
4. Metastatic disease to bowel wall or mesentery
5. Zollinger-Ellison S.

UNCOMMON

1. A-beta-lipoproteinemia; A-alpha-lipoproteinemia
2. Amyloidosis
3. Compensatory dilatation of remaining bowel after extensive small bowel resection
4. Hypoalbuminemia (eg, cirrhosis; nephrotic S.)
5. Lymphoma^g
6. Parasitic disease (eg, thickened folds with mal-absorption and dilated loops can be seen in strongyloidiasis, hookworm disease, intestinal capillariasis, and schistosomiasis japonica)
7. Radiation enteritis
8. Tropical sprue
9. Tuberculosis

Reference

1. Eisenberg RL: Gastrointestinal Radiology: A Pattern Approach. (ed 3) Philadelphia: Lippincott, 1996, pp 464-467

Gamut G-60

SMALL BOWEL DILATATION WITH NORMAL FOLD PATTERN

COMMON

1. Adynamic ("paralytic") ileus
2. Drug effect (esp. anticholinergics)
3. Mechanical obstruction
4. Mesenteric ischemia (eg, atherosclerosis; lupus erythematosus)
5. Postvagotomy; gastrectomy (dumping syndrome)
6. Sprue (esp. nontropical); celiac disease; other mal-absorption syndromes (See G-57)

UNCOMMON

1. Amyloidosis
2. Chagas' disease
3. Chronic idiopathic intestinal pseudo-obstruction
4. Hypokalemia (esp. in diabetic)
5. Lactase deficiency
6. Scleroderma; dermatomyositis

References

Gamut G-61

ACUTE NONOBSTRUCTIVE SMALL BOWEL DISTENTION ("PARALYTIC ILEUS")

COMMON

1. Drug effect (eg, atropine; morphine; barbiturates; Lomotil; Pro-Banthine; hexamethonium; L-dopa)
2. Electrolyte imbalance (eg, hypokalemia; hypochloremia; calcium or magnesium abnormality)

(continued)

3. Gastroenteritis, acute; food poisoning
4. Pain in abdomen (eg, renal, ureteral, or common bile duct stone; torsion of uterine fibroid or ovarian cyst or tumor; lead colic; sickle cell crisis; tabetic crisis; porphyria)
5. Peritonitis, acute
6. Pneumonia; other acute thoracic disease (eg, myocardial infarction; heart failure)
7. Postoperative (abdominal or pelvic surgery)
8. Retroperitoneal hemorrhage
9. "Sentinel loop," localized ileus (eg, acute cholecystitis; appendicitis; acute pancreatitis; acute diverticulitis) (See G-80)
10. Shock; gram-negative septicemia; hypoxia
11. Trauma (esp. spine or lower rib; abdominal contusion; intramural hematoma)
12. Vascular occlusion (eg, mesenteric infarction)

UNCOMMON

1. Adrenal insufficiency
2. Aerophagia; assisted respiration
3. Ceroidosis (malabsorption with prolonged vitamin E depletion)
4. Chronic idiopathic intestinal pseudo-obstruction
5. Diabetic acidosis; insulin shock
6. Enterocolitis (eg, typhoid fever; *Yersinia*)
7. Hypoparathyroidism
8. Hypothyroidism
9. Interloop abscess
10. Myotonic dystrophy; muscular dystrophy
11. Neonatal adynamic ileus (eg, septicemia; hypoxia-induced vasculitis; infantile respiratory distress S.; intestinal infection; peritonitis; mesenteric thrombosis)
12. Neonatal necrotizing enterocolitis
13. Renal failure; uremia; acute glomerulonephritis
14. Urinary retention

CHRONIC NONOBSTRUCTIVE SMALL BOWEL DISTENTION**COMMON**

1. Ascites
2. Connective tissue disease (collagen disease)^g (esp. scleroderma)
3. Neurologic or muscular disorder^g (eg, parkinsonism; myotonic dystrophy; tabes; spinal cord lesion)
4. Sprue, tropical or nontropical (celiac disease)
5. Vagotomy

UNCOMMON

1. Adrenal insufficiency
2. Allergic enterocolitis
3. Amyloidosis
4. Ceroidosis (prolonged malabsorption and vitamin E depletion)
5. Chronic idiopathic intestinal pseudo-obstruction
6. Congenital short intestine
7. Cystic fibrosis (mucoviscidosis)
8. Diabetes with hypokalemia
9. Disaccharidase deficiency (eg, lactase deficiency)
10. Drug effect (eg, Lomotil; morphine)
11. Eosinophilic gastroenteritis
12. Hypoparathyroidism
13. Hypoproteinemia (eg, cirrhosis; nephrosis; malnutrition; burn; A-beta-lipoproteinemia)
14. Intestinal lymphangiectasia
15. Jejunal diverticulosis
16. Lymphoma^g
17. Malrotation; internal hernia
18. Mesenteritis
19. Myxedema; hypothyroidism
20. Parasitic disease (esp. Chagas' disease; chronic strongyloidiasis; schistosomiasis japonica)
21. Postoperative (eg, gastrectomy; colectomy; intestinal bypass)
22. Renal failure; uremia; peritoneal dialysis
23. Vascular insufficiency (mesenteric ischemia); vasculitis (eg, lupus erythematosus; polyarteritis nodosa)

24. Waldenström's macroglobulinemia
25. Whipple's disease

TERMINAL ILEUM LESION

COMMON

1. Appendicitis
2. Carcinoid
3. Crohn's disease
4. Intussusception
5. Mass, extrinsic (eg, ovarian or other pelvic neoplasm; aneurysm of iliac artery)
6. Meconium ileus (cystic fibrosis {mucoviscidosis})
7. Nodular lymphoid hyperplasia; normal lymphoid follicles

UNCOMMON

1. Diverticulitis
2. Endometrial implant
3. Food particles; foreign body; gallstone
4. Fungus disease (eg, actinomycosis; histoplasmosis)
5. Intramural hematoma
6. Laxative abuse
7. Meckel's diverticulum
8. Mesenteric infarction; ischemic enteritis
9. Metastasis (esp. from gastric, colonic or ovarian neoplasm)
10. Neoplasm, benign or malignant (eg, gastrointestinal stromal tumor_g; carcinoma; sarcoma; lymphoma_g)

11. Parasitic disease
 - a. Intraluminal worms (eg, *Ascaris*; tapeworm—*Taenia saginata*)
 - b. Inflammatory changes (eg, schistosomiasis; amebiasis; strongyloidiasis; rarely giardiasis; intestinal capillariasis; anisakiasis; angiostrongyliasis costaricensis)
12. Polyp_g (See G-106)
13. Radiation enteritis
14. Tuberculosis
15. Typhoid fever
16. Ulcerative colitis ("backwash ileitis")
17. *Yersinia* enterocolitis

NONDIAPHRAGMATIC HERNIAS

COMMON

1. Femoral
2. Incisional
3. Inguinal
4. Umbilical (incl. omphalocele)
5. Ventral

UNCOMMON

1. Lesser sac (foramen of Winslow)
2. Lumbar

(continued)

3. Mesenteric (small bowel; sigmoid)
4. Obturator
5. Paracecal
6. Paraduodenal
7. Pelvic (broad ligament)
8. Perineal
9. Retroperitoneal
10. Sciatic
11. Spigelian

Gamut G-67**APHTHOID ULCERS IN THE SMALL BOWEL OR COLON*****COMMON**

1. Crohn's disease

UNCOMMON

1. Amebiasis
2. [Artifacts (eg, fecal debris; flocculated barium; innominate grooves of colon)]
3. Behçet S.

4. Candidiasis
5. Cytomegalovirus infection of ileum and colon (also esophagus and stomach)
6. Ischemic colitis
7. [Lymphoid hyperplasia of colon]
8. Salmonellosis
9. Tuberculosis
10. *Yersinia* enterocolitis

* Tiny discrete central ulcer containing barium surrounded by a halo of edematous mucosa, best seen on air-contrast examination.

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

INNUMERABLE TINY NODULES (SAND-LIKE OR GRANULAR LUCENCIES SMALLER THAN 5 MM) IN THE SMALL BOWEL OR COLON

COMMON

1. Crohn's disease ("cobblestone" pattern)
2. [Food particles; seeds; air bubbles]
3. Nodular lymphoid hyperplasia (eg, dysgamma-globulinemia)
4. Normal lymphoid follicles
5. Polyposis syndromes (esp. Cronkhite-Canada S.)
(See G-106)

UNCOMMON

1. A-beta-lipoproteinemia
2. Amyloidosis

3. Cystic fibrosis (mucoviscidosis)
4. Eosinophilic enteritis
5. Histoplasmosis
6. Hyperplastic Peyer's patches (eg, typhoid fever)
7. Intestinal lymphangiectasia
8. Lymphoma^g
9. Mastocytosis
10. Mycobacterial enteritis
11. Ulcerative colitis
12. Waldenström's macroglobulinemia; heavy chain disease
13. Whipple's disease
14. *Yersinia* enterocolitis

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

MESENTERIC VASCULAR COMPROMISE (INTESTINAL ISCHEMIA OR INFARCTION)

COMMON

1. Arterial thromboembolism (eg, secondary to myocardial infarction; rheumatic heart disease; atrial fibrillation)
2. Arteriosclerosis
3. Digitalis toxicity

(continued)

4. Heart failure
5. Iatrogenic (eg, catheter arteriography; drug instillation)
6. Idiopathic (normal vessels)
7. Intestinal obstruction (esp. strangulation)
8. Peritoneal band or adhesion
9. Septicemia (eg, drug abuse; bacterial endocarditis)
10. Vascular compression by extrinsic mass
11. Venous thrombosis

UNCOMMON

1. Abdominal or pelvic inflammatory disease
2. Arteritis (eg, Takayasu's arteritis; polyarteritis nodosa)
3. Coarctation of aorta (esp. postoperative)
4. Dissecting aneurysm
5. Fibromuscular hyperplasia of mesenteric artery
6. Polycythemia
7. Postoperative (esp. surgical ligation)
8. Radiation injury
9. Transient ischemia of children
10. Trauma to the intestine or its vessels

**GAS IN THE BOWEL WALL
(PNEUMATOSIS INTESTINALIS)****COMMON**

1. Colitis (eg, ulcerative; tuberculous; amebic; Crohn's disease)
2. Necrosis of the intestine
 - a. Necrotizing enterocolitis (esp. in premature or debilitated infants)
 - b. Mesenteric thrombosis with infarction
 - c. Gangrenous, pseudomembranous, or other enterocolitis
 - d. Strangulated hernia, volvulus, or other intestinal obstruction
 - e. Primary infection of bowel wall
 - f. Ingestion of corrosives
3. Primary, idiopathic (pneumatosis cystoides intestinalis)
4. Toxic megacolon (See G-94)

UNCOMMON

1. Adynamic ileus (esp. postoperative)
2. Air hose injury of rectum ("goose")
3. Colonic irrigation; hydrogen peroxide enema
4. Congenital obstruction (eg, atresia; stenosis; web; diaphragm; imperforate anus; meconium plug)
5. Connective tissue disease (collagen disease)_g (esp. scleroderma)
6. Diabetes with gas-forming organism
7. Graft-versus-host disease (esp. involving cecum)
8. Hirschsprung's disease or other megacolon (See G-93)
9. Iatrogenic (eg, endoscopy; colonoscopy; catheter jejunostomy; umbilical artery catheterization)
10. Idiopathic
11. Leukemia
12. Malabsorption (eg, sprue)
13. Obstructive pulmonary disease, esp. with coughing (eg, emphysema; bullous disease; asthma; chronic bronchitis)

14. Perforated jejunal diverticulum
15. Pneumomediastinum with abdominal extension of air
16. Postoperative (esp. jeunoileal bypass; postoperative intramural leakage)
17. Pyloroduodenal obstruction (eg, peptic ulcer, esp. with intramural perforation; pyloric stenosis)
18. Steroid and other immunosuppressive therapy
19. Trauma to gut

Gamut G-71-1

SMALL AND LARGE BOWEL WALL THICKENING: HOMOGENEOUS ATTENUATION ON POSTCONTRAST CT

COMMON

1. Carcinoma of small bowel and/or colon
2. Lymphoma^g
3. Submucosal hemorrhage or hematoma

UNCOMMON

1. Crohn's disease, chronic
2. Infarcted bowel
3. [Pseudothickening related to incomplete distention and residual fluid]
4. Radiation injury, chronic

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Reference

1. Macari M, Baltazar EJ: CT of bowel wall thickening: Significance and pitfalls of interpretation. *AJR* 2001;176: 1105–1116

Gamut G-71-2

SMALL AND LARGE BOWEL WALL THICKENING: HETEROGENEOUS (STRATIFIED OR MIXED) ATTENUATION ON POSTCONTRAST CT

STRATIFIED ATTENUATION*

COMMON

1. Bowel edema related to cirrhosis or hypoproteinemia
2. Crohn's disease
3. Henoch-Schönlein purpura
4. Infectious enterocolitis
5. Ischemia
6. Lupus erythematosus
7. Radiation injury
8. Ulcerative colitis
9. Vasculitis

UNCOMMON

1. Infiltrating scirrhous carcinoma (usually colon or rectum)
2. Pneumatosis
3. [Residual fluid and contrast material]
4. Submucosal fat deposition

(continued)

MIXED ATTENUATION+

1. Carcinoma (esp. mucinous adenocarcinoma)
2. Gastrointestinal stromal tumor_g

* Alternating (stratified) layers of attenuation in a thickened bowel segment may take the form of a double halo or a target configuration. The double halo sign represents an inner low-attenuation (edema) ring surrounded by an outer higher attenuation ring on postcontrast CT. In the target sign, inner and outer layers of high attenuation surround a central area of decreased (edema) attenuation. The high attenuation in these signs is related to hyperemia.

+ The grossly thickened bowel wall has several irregular zones of lower attenuation haphazardly located next to areas of higher attenuation. These findings are related to ischemia and necrosis and are seen in high-grade, poorly differentiated neoplasms such as adenocarcinoma and stromal cell tumors.

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

6. Radiation injury
7. Submucosal hemorrhage

UNCOMMON

1. Lupus erythematosus

Reference

1. Macari M, Baltazar EJ: CT of bowel wall thickening: Significance and pitfalls of interpretation. AJR 2001;176: 1105–1116

Gamut G-74-3**DIFFUSE BOWEL WALL THICKENING ON POSTCONTRAST CT****COMMON**

1. Edema from cirrhosis or hypoproteinemia
2. Infectious enterocolitis
3. Lupus erythematosus
4. Ulcerative colitis

(continued)

UNCOMMON

1. Ischemia
2. Pseudomembranous colitis

Reference

1. Macari M, Baltazar EJ: CT of bowel wall thickening: Significance and pitfalls of interpretation. AJR 2001;176: 1105-1116

Gamut G-75

**RESIDUAL INTESTINAL BARIUM
AFTER GASTROINTESTINAL STUDY
(MORE THAN ONE WEEK)**

COMMON

1. Barium in appendix or diverticula of small bowel or colon
2. Fecal impaction
3. Gastric obstruction
4. Nonobstructive ileus (See G-61)

UNCOMMON

1. Aganglionosis of colon (eg, Hirschsprung disease; Chagas' disease)
2. Blind loop syndrome (See G-58)
3. [Calcification (esp. milk of calcium)]
4. Cryptosporidiosis
5. Drug effect (eg, morphine)
6. Duplication of intestine
7. Hypothyroidism (eg, myxedema; cretinism)
8. Meckel's diverticulum
9. [Medication, opaque]
10. Perforation of intestine
11. Postoperative (eg, side-to-side anastomosis; gastro-ileostomy; bypass procedure)
12. Scleroderma
13. Stricture of intestine

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-76

**INTESTINAL OBSTRUCTION
IN A NEWBORN***

COMMON

- *1. Congenital stenosis or atresia of stomach, duodenum, small bowel, colon*, rectum*, or anus (imperforate anus)*
2. Hernia, incarcerated, internal or external (eg, inguinal, femoral, umbilical, diaphragmatic, mesenteric defects)
- *3. Hirschsprung disease
4. Malrotation with midgut volvulus
- *5. Meconium ileus (cystic fibrosis {mucoviscidosis})
- *6. Meconium plug S.
- *7. Small left colon S.

UNCOMMON

1. Apple peel intestinal atresia
2. Choledochal cyst
3. Congenital peritoneal bands (Ladd's bands)
4. Inspissated milk S.
5. Intestinal duplication
6. Intraluminal diaphragm or web
7. Intramural hematoma (eg, trauma)
- *8. Intussusception (rare in newborn)
9. Meconium peritonitis (eg, meconium ileus)
- *10. Megacystis-microcolon-intestinal hypoperistalsis S. (Berdon S.)
11. Neoplasm (usually distention without obstruction)
12. [Paralytic ileus (eg, from drugs given during labor)]
13. Preduodenal portal vein
14. Segmental dilatation of ileum

* Low intestinal obstruction in a newborn.

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-77

INTESTINAL OBSTRUCTION IN A CHILD (See G-76)

COMMON

1. Adhesions (inflammatory; postoperative); congenital peritoneal bands (Ladd's bands)
2. Appendicitis (esp. perforated)
3. Hernia, incarcerated (internal or external)
4. Hirschsprung disease
5. Intussusception (eg, ameboma; intestinal duplication; Henoch-Schönlein purpura; idiopathic; Meckel's diverticulum; polyp_g; lymphoma_g; other neoplasm)

UNCOMMON

1. Cast S. (cast treatment for scoliosis causing superior mesenteric artery S.)
2. Chronic granulomatous disease of childhood
3. Crohn's disease
4. Cystic fibrosis (mucoviscidosis)
5. Familial Mediterranean fever
6. Fecal impaction
7. Foreign body; bezoar
8. Kawasaki S.
9. Neoplasm, benign or malignant (eg, gastrointestinal stromal tumor_g; lymphoma_g; sarcoma)
10. Neurofibromatosis I (von Recklinghausen disease)
11. Parasitic disease (esp. *Ascaris* bolus; ameboma)

12. [Pseudo-obstruction, idiopathic]
13. Stenosis, congenital (eg, duodenum; small bowel; rectum)
14. Tuberculous enteritis
15. Volvulus, midgut or other

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-78

INTESTINAL OBSTRUCTION IN AN ADULT

COMMON

1. Abscess, abdominal_g (eg, periappendiceal; tuboovarian)
2. Adhesions (inflammatory; postoperative); congenital peritoneal bands (Ladd's bands)
3. Carcinoma of colon, rectum, or rarely, small bowel
4. Crohn's disease
5. Diverticulitis (esp. colonic)
6. Fecal impaction
7. Hernia, incarcerated, internal or external (See G-64-S)
8. Intussusception
9. Metastatic disease (esp. melanoma; carcinoma of ovary, breast, lung; peritoneal carcinomatosis) or invasion of bowel by adjacent pelvic or abdominal malignancy
10. Stricture (eg, neoplastic; inflammatory—lymphogranuloma venereum; radiation; potassium-induced; ischemic; posttraumatic; postoperative)
11. Volvulus (esp. cecal or sigmoid)

(continued)

UNCOMMON

1. Amyloidosis
2. Bezoar; enterolith; foreign body
3. Endometriosis
4. Extrinsic pressure from large adjacent neoplasm, distended bladder, or pregnant uterus
5. Familial Mediterranean fever
6. Gallstone ileus
7. Granulomatous disease (eg, actinomycosis; tuberculosis)
8. Hirschsprung disease
9. [Immobilization; Cast S.]
10. Intestinal duplication
11. [Intestinal pseudo-obstruction, idiopathic] (See G-79)
12. Intramural hematoma
13. Lymphoma_g
14. Neoplasm, other (gastrointestinal stromal tumor_g — esp. leiomyoma; carcinoid; sarcoma); cyst
15. Neurofibromatosis I (von Recklinghausen disease)
16. Parasitic disease (*Ascaris* bolus; amebiasis; Chagas' disease; schistosomiasis)
17. Retractile mesenteritis
18. [Spasm (eg, sickle cell crisis; plumbism; porphyria; tabes; diabetic ketosis; potassium deficiency)]
19. Superior mesenteric artery S.
20. Ulcerative colitis, chronic
21. Vascular occlusion (arterial or venous); mesenteric infarction; ischemic colitis (See G-69)

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

INTESTINAL PSEUDO-OBSTRUCTION (OGILVIE SYNDROME); BOWEL OBSTRUCTION IN THE ABSENCE OF MECHANICAL BLOCKAGE

COMMON

1. Idiopathic (“primary”)
2. Paralytic ileus (eg, trauma; hypokalemia; pneumonia; myocardial infarction; pancreatitis; sickle cell crisis)

UNCOMMON

1. Amyloidosis
2. Celiac disease; sprue
3. Ceroidosis (prolonged malabsorption and vitamin E depletion)
4. Connective tissue disorder (collagen disease)_g
5. Diverticulosis of small bowel
6. Drug reaction (eg, phenothiazine; antidepressant; anti-Parkinsonism drugs; morphine)
7. Endocrine disorder (eg, myxedema; diabetes; hypoparathyroidism; pheochromocytoma)
8. Enteric muscle disorder (eg, myotonic dystrophy; scleroderma)
9. Jejunoileal bypass
10. Neonatal adynamic ileus
11. Neurologic disorder (eg, parkinsonism, stroke, paralysis, brain damage)
12. Parasitic disease (eg, Chagas' disease; chronic strongyloidiasis)
13. Pelvic surgery (eg, hysterectomy)
14. Porphyria, acute intermittent
15. Retractile mesenteritis
16. Urinary retention
17. Vitamin D deficiency

SENTINEL LOOP (LOCALIZED DILATATION OF SMALL AND/OR LARGE BOWEL)

COMMON

1. Acute appendicitis (right lower quadrant)
2. Acute cholecystitis (right upper quadrant)
3. Acute diverticulitis (left lower quadrant)
4. Acute pancreatitis (upper or mid-abdomen)
5. Acute ureteral colic (stone)
6. Infarction or ischemia of bowel
7. "Paralytic ileus" (See G-61)
8. Perforated peptic ulcer (upper abdomen)
9. [Small bowel obstruction, early or incomplete]

UNCOMMON

1. Abdominal trauma
2. Drug effect
3. Gastroenteritis
4. [Normal variant]
5. [Volvulus]

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-81

APPENDICEAL LESION OR MASS ADJACENT TO APPENDIX

COMMON

1. Appendiceal abscess
2. Appendiceal fecolith (calculus)
3. Appendicitis, acute or resolving
4. Carcinoid
5. Ileocecal valve, normal or prolapsed
6. Postoperative (eg, inverted stump; surgical deformity; adhesions)

UNCOMMON

1. [Appendix hernia]
2. Crohn's disease
3. [Diverticulum]
4. Endometrial implant
5. Extrinsic mass
6. Foreign body
7. Invagination or intussusception of appendix
8. Mucocele
9. Myxoglobulosis
10. Neoplasm, benign (eg, gastrointestinal stromal tumor; lipoma; polyp_g)
11. Neoplasm, malignant, primary (eg, carcinoma; lymphoma_g) or metastatic implant or extension
12. Parasitic disease (eg, amebiasis; trichuriasis; ascariasis; anisakiasis; schistosomiasis; angiostrongylasis costaricensis)
13. Tuberculosis
14. Typhoid fever
15. Ulcerative colitis
16. *Yersinia* enterocolitis

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-82-S**CONGENITAL ANOMALIES AND VARIATIONS OF THE APPENDIX****COMMON**

1. Abnormal length (under 2 cm or over 25 cm)
2. Abnormal location (eg, retrocecal appendix; malposition or malrotation of cecum)
3. Abnormal origin (eg, close to or far from ileocecal valve; high on cecum)

UNCOMMON

1. Absence of appendix
2. Double appendix
3. Primitive appendix (very thin lumen)

Gamut G-83**SOLITARY FILLING DEFECT IN THE COLON****COMMON**

1. Carcinoma
2. Diverticulitis; pericolic abscess (See G-89)
3. Fecal mass or impaction
4. Intussusception; ileal prolapse
5. Polyp_g (esp. adenomatous; hyperplastic; juvenile; or hamartomatous) (See G-84-S)

UNCOMMON

1. Amyloidoma
2. Carcinoïd
3. Crohn's disease
4. Cyst (duplication or other)
5. Endometrioma
6. Extramedullary plasmacytoma
7. Foreign body; gallstone; food particle; bezoar
8. Intramural hematoma
9. Inverted colonic diverticulum
10. Lymphoma_g
11. Metastasis (incl. invasive neoplasm)
12. Mucormycoma
13. Neoplasm, benign (eg, lipoma; hemangioma; leiomyoma or other gastrointestinal stromal tumor_g)
14. Parasitic disease (esp. ameboma; schistosomal granuloma; helminthoma; anisakiasis, *Ascaris* bolus)
15. Periappendiceal abscess
16. Postoperative (eg, anastomosis; suture granuloma)
17. Pseudopolyp, "giant" type (in ulcerative colitis)
18. Pseudotumor (eg, fibrous band; adhesion)
19. Sarcoma (incl. Kaposi)
20. Solitary rectal ulcer syndrome
21. Tuberculoma
22. Varix; hemorrhoid
23. Villous adenoma

CLASSIFICATION OF COLONIC TUMORS AND TUMOR-LIKE LESIONS

I. EPITHELIAL TUMORS

BENIGN—ADENOMA

1. Tubular
2. Villous
3. Tubulovillous

MALIGNANT

1. Adenocarcinoma
2. Adenoacanthoma
3. Adenosquamous carcinoma
4. Squamous cell carcinoma
5. Basaloid (cloacogenic) carcinoma
6. Carcinosarcoma

II. NEUROENDOCRINE TUMORS

1. Adenocarcinoid tumor
2. Carcinoid tumor

III. NONEPITHELIAL TUMORS

BENIGN

1. Smooth-muscle tumor
2. Neurilemmoma
3. Lipoma
4. Vascular tumor

IV. HEMATOPOIETIC AND LYMPHOID TUMORS

V. UNCLASSIFIED TUMORS

VI. SECONDARY (METASTATIC) TUMORS

VII. NONNEOPLASTIC (TUMOR-LIKE) LESIONS

HAMARTOMA

1. Peutz-Jeghers polyp
2. Juvenile polyp

HETEROTOPIA

1. Colitis cystica profunda
2. Hyperplastic polyp
3. Lymphoid polyp
4. Inflammatory polyp

References

1. Fengolio-Preiser CM: Gastrointestinal Pathology (ed 2) Philadelphia: Lippincott-Raven, 1999

Gamut G-85

ANNULAR (“APPLE CORE” OR “NAPKIN RING”) LESION OF THE COLON

COMMON

1. Carcinoma

UNCOMMON

1. Ameboma
2. [Circular muscle contraction (colonic “sphincter”)]
3. Diverticulitis (esp. with submucosal abscess)
4. Helminthoma
5. Lymphoma^g
6. Stricture, chronic localized (eg, Crohn’s disease; ulcerative colitis; ischemic colitis; lymphogranuloma venereum)
7. Tuberculoma
8. Villous adenoma

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

(continued)

Gamut G-86**SEGMENTAL NARROWING
OF THE COLON****COMMON**

1. Abscess or other extrinsic inflammatory process (eg, pericolic) (See G-89)
2. Carcinoma (esp. “apple-core” adenocarcinoma or scirrhous)
3. [Circular muscle contraction or spasm, usually transient]
4. Crohn’s disease
5. Diverticulitis
6. Endometriosis
7. Ischemic colitis (See G-69)
8. Postoperative deformity (eg, adhesion; narrow anastomosis)
9. Ulcerative colitis

UNCOMMON

1. Actinomycosis
2. Adhesive bands
3. Amyloidosis
4. Carcinoid
5. Carcinoma developing in ulcerative colitis or Crohn’s disease or adjacent to uretersigmoidostomy stoma
6. Cathartic colon; caustic colitis
7. Colitis, other (eg, herpes; cytomegalovirus; fungal)
8. Foreign body perforation with pericolic abscess
9. Intramural hematoma
10. Lymphogranuloma venereum
11. Lymphoma_g

12. Metastatic disease (eg, hematogenous or lymphangitic spread; peritoneal seeding; or direct extension to colon)
13. Neoplasm of colon, benign (eg, lipoma, gastrointestinal stromal tumor_g)
14. Neoplasm, extrinsic (eg, pancreatic; ovarian; renal)
15. Pancreatitis with direct spread to transverse colon or splenic flexure
16. Parasitic disease (eg, amebiasis/ameboma; schistosomiasis; helminthoma; strongyloidiasis; an-giostrongylasis costaricensis)
17. Pelvic lipomatosis
18. Radiation fibrosis
19. Retractile mesenteritis
20. Sarcoma (incl. Kaposi)
21. Stricture, idiopathic
22. Tuberculosis
23. Typhlitis
24. Ulcer of colon (esp. solitary rectal ulcer syndrome)

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-87**MULTIPLE FILLING DEFECTS
IN THE COLON****COMMON**

1. Artifacts (eg, feces; air bubbles; corn or other food particles; mucus strands or globules; oil droplets; foreign bodies)
2. [Diverticulosis]

3. Normal lymphoid follicles
4. Polyposis, familial
5. Polyps^g (See G-84-S)
6. Pseudopolyps (esp. in ulcerative colitis)

UNCOMMON

1. Ameobomas
2. Amyloidosis
3. Bannayan-Riley-Ruvalcaba S.
4. Carcinomas, multiple
5. Colitis cystica profunda
6. Colitis, other types (eg, pseudomembranous; ischemic; *Yersinia*; cytomegalovirus; Behçet S.)
7. Cowden S. (multiple hamartoma S.)
8. Cronkhite-Canada S.
9. Cystic fibrosis (mucoviscidosis)
10. Endometriosis
11. Gardner S.
12. Hemangiomas
13. Juvenile polyposis
14. Lipomatous polyposis
15. Lymphoma^g; leukemic infiltration
16. Malakoplakia
17. Metastases
18. Neurofibromatosis
19. Nodular lymphoid hyperplasia (if over 4 mm in size, may be due to AIDS with lymphoid hyperplasia); lymphoid polyps
20. Parasites, intraluminal (eg, *Ascaris*; *Trichuris*)
21. Peutz-Jeghers S. (alimentary tract polyposis)
22. Pneumatosis cystoides intestinalis
23. Polyposis syndromes, other (See G-106)
24. Schistosomiasis (inflammatory polyps)
25. Turcot S.
26. Urticaria, incl. hives, blebs, submucosal edema (secondary to chronic ischemia; colon obstruction; herpes zoster or *Yersinia* colitis; Chagas' disease)
27. Varices; hemorrhoids

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-88

COLITIS (ULCERATION, EDEMA, SPASM); ALSO THICKENING OF THE COLON WALL ON CT, US, OR MRI

COMMON

1. Amebiasis
2. Carcinoma, esp. scirrhous or mucinous adenocarcinoma
3. Crohn's disease
4. Diverticulitis
5. *Helicobacter fetus* colitis
6. Ischemic colitis (See G-69)
7. Ulcerative colitis

UNCOMMON

1. Actinomycosis
2. Amyloidosis
3. Bacillary dysentery (shigellosis)
4. Behçet S.
5. Bowel edema from cirrhosis, protein loss, portal hypertension
6. Cathartic colon; enema abuse (caustic colitis)
7. Chronic granulomatous disease of childhood
8. Colitis cystica profunda
9. Collagenous colitis

(continued)

10. Drug therapy (esp. steroids; NSAIDs; antibiotics; chemotherapeutic agents; cimetidine; anti-fungal flucytosine; gold; methyldopa)
11. Fungus disease (eg, histoplasmosis; mucormycosis; candidiasis)
12. Graft-versus-host disease
13. Lymphogranuloma venereum (chlamydia infection)
14. Lymphoma^g; leukemic infiltration (diffuse)
15. Mercury poisoning
16. Metastatic disease
17. Neoplasm, other (eg, gastrointestinal stromal tumor^g; Kaposi sarcoma)
18. Nonspecific benign ulceration of colon
19. Pancreatitis with involvement of transverse colon or splenic flexure
20. Parasitic disease, other (esp. schistosomiasis; strongyloidiasis; helminthoma; Chagas' disease; anisakiasis and angiostrongylasis costaricensis—ileocecal region)
21. Postoperative colitis (incl. diversion colitis in isolated segment after proximal colostomy or ileostomy; postrectal biopsy ulceration)
22. Proctitis (nonspecific; chemical—paraldehyde; in male homosexuals, often due to gonorrhea, lymphogranuloma venereum, or herpes simplex)
23. Pseudomembranous or necrotizing colitis (eg, *Clostridium difficile* infection, esp. after antibiotic therapy; postoperative; or proximal to colon obstruction)
24. Radiation colitis
25. *Salmonella* colitis
26. Solitary rectal ulcer S.
27. Staphylococcal colitis (eg, after oral tetracycline therapy)
28. Stercoral colitis (in obstruction)
29. Tuberculosis
30. Typhlitis
31. Uremic colitis; hemolytic-uremic S.
32. Urticaria ("colon hives" secondary to chronic ischemia; colon obstruction; herpes zoster or *Yersinia* colitis; Chagas' disease)
33. Viral infection (eg, herpes simplex-anorectal

herpes; herpes zoster; cytomegalovirus—esp. in AIDS; rotavirus)

34. *Yersinia* colitis

PERICOLIC ABSCESS

COMMON

1. Appendicitis
2. Crohn's disease
3. Diverticulitis
4. Neoplasm of colon, perforated primary (esp. carcinoma) or metastatic
5. Pancreatitis
6. Trauma, external or iatrogenic (eg, enema)
7. Tubo-ovarian abscess

UNCOMMON

1. Actinomycosis
2. Foreign body perforation
3. Idiopathic
4. Ischemic colitis

5. Lymphogranuloma venereum (*Chlamydia* infection)
6. Parasitic disease (esp. amebiasis; schistosomiasis; helminthoma; anisakiasis or angiostrongyliasis costaricensis—ileocecal region)
7. Postoperative (eg, suture leak; talc granuloma)
8. Renal infection or abscess
9. Tuberculosis
10. Ulcerative colitis

DOUBLE TRACKING OF BARIUM IN THE DISTAL COLON*

COMMON

1. Crohn's disease
2. Diverticulitis

UNCOMMON

1. Carcinoma of colon

* Barium in an extraluminal sinus tract paralleling the bowel lumen.

Reference

1. Eisenberg RL: Gastrointestinal Radiology: A Pattern Approach. (ed 3) Philadelphia: Lippincott, 1996, pp 784–787

Gamut G-91

SMOOTH COLON

COMMON

1. Cathartic or enema abuse
2. Chronic obstruction (eg, megacolon; Chagas' disease)
3. Ischemic colitis, late (See G-69)
4. Ulcerative colitis, chronic

UNCOMMON

1. Amyloidosis
2. Bacillary dysentery, chronic (shigellosis)
3. Carcinoma, scirrhous
4. Lymphogranuloma venereum, late (*Chlamydia* infection)
5. Lymphoma_g
6. Parasitic disease, late (eg, schistosomiasis; strongyloidiasis; amebic stricture)
7. Radiation colitis, late

Gamut G-92

COLONIC DISTENTION WITHOUT OBSTRUCTION

COMMON

1. Acute nonobstructive distention, “paralytic ileus” (eg, postoperative; peritonitis; appendicitis; pancreatitis; typhoid fever) (See G-61)
2. Chronic constipation; cathartic abuse
3. Electrolyte imbalance (hypokalemia; hypochloremia; calcium abnormality)

(continued)

- *4. Functional megacolon (psychogenic; idiopathic)
- *5. Hirschsprung's disease
- 6. Mesenteric infarction (See G-69)
- 7. Shock; septicemia; hypoxia
- 8. Toxic megacolon (See G-94)
- 9. Trauma (esp. spine or lower rib injury; intramural hematoma)
- 10. Ureteral colic

UNCOMMON

- *1. Aerophagia
 - *2. Amyloidosis; familial Mediterranean fever (familial recurrent polyserositis)
 - *3. Ceroidosis (vitamin E depletion)
 - *4. Chagas' disease
 - *5. Connective tissue disease (collagen disease)_g (esp. scleroderma; polyarteritis nodosa)
 - *6. Cystic fibrosis (mucoviscidosis)
 - *7. Drug therapy (eg, Pro-Banthine; hexamethonium; chlorpromazine; benztrapine; morphine; L-dopa; atropine)
 - *8. Endocrine disturbance (eg, adrenal insufficiency; multiple endocrine neoplasia (MEN) S.; hypothyroidism; hypoparathyroidism)
 - 9. Functional (eg, diabetic coma; lead colic; sickle cell crisis; tabes; porphyria; pheochromocytoma)
 - 10. Idiopathic intestinal pseudo-obstruction
 - 11. Kawasaki disease
 - *12. Muscular, neurologic, or psychiatric disorder_g (eg, amyotonia congenita {Oppenheim's disease}; multiple sclerosis; parkinsonism, Riley-Day S. {familial dysautonomia}; senility; schizophrenia; brain damage; paralysis)
 - 13. Neurofibromatosis (esp. plexiform)
 - 14. Pneumonia or other acute thoracic disease (eg, myocardial infarction; heart failure)
 - *15. Renal failure; uremia; urinary retention
 - 16. Retroperitoneal hemorrhage
 - 17. Spinal cord lesion; paraplegia
 - *18. Sprue
- * Chronic.

MEGACOLON

COMMON

- 1. Distal obstructing lesion (esp. carcinoma)
- *2. Functional (psychogenic; idiopathic)
- *3. Hirschsprung disease
- *4. Imperforate anus; colon or rectal atresia; anal stenosis
- *5. Nonobstructive distention ("paralytic ileus")
- 6. Scleroderma; dermatomyositis
- *7. Toxic megacolon (See G-94)

UNCOMMON

- *1. Aerophagia
- 2. Amyloidosis
- 3. Chagas' disease
- *4. Chronic idiopathic intestinal pseudo-obstruction
- *5. Cystic fibrosis (mucoviscidosis); meconium plug S. (dilated colon proximal to plug)
- 6. Diabetes
- *7. Drug therapy (esp. Pro-Banthine; phenothiazine; anti-Parkinsonism agents)

- *8. Duplication
- *9. Fetal cytomegalovirus infection
- *10. Hypothyroidism (esp. myxedema; cretinism)
- *11. Immobilization, prolonged (eg, cast S.)
- *12. Multiple endocrine neoplasia (MEN) S. (See J-5)
- *13. Muscular disorder_g (eg, muscular dystrophy)
- *14. Neurologic disorder_g (eg, plexiform neurofibromatosis; meningocele; spina bifida; paralysis; neuronal intestinal dysplasia; Parkinsonism, brain damage)
- *15. Obstruction of colon from chronic stricture (eg, lymphogranuloma venereum or other rectal stricture; Crohn's disease; postoperative scarring*; post-necrotizing enterocolitis*)
- *16. Purgative abuse
- *17. Riley-Day S. (familial dysautonomia)
- *18. Sacrococcygeal teratoma; other pelvic neoplasm
- *19. Small left colon S. (dilated colon proximally)
- *20. Sotos S. (cerebral gigantism)
- *21. Steatorrhea; celiac disease; sprue

* Megacolon in an infant or child.

TOXIC MEGACOLON

COMMON

1. Ulcerative colitis

UNCOMMON

1. Amebic colitis

- 2. Bacillary dysentery, acute (shigellosis)
- 3. Behçet S.
- 4. Cholera
- 5. Crohn's disease
- 6. Enterocolitis, other (necrotizing; pseudo-membranous; hemorrhagic)
- 7. *Helicobacter fetus* colitis
- 8. Hirschsprung disease
- 9. Ischemic colitis
- 10. Strongyloidiasis
- 11. Typhoid fever

COLON OF REDUCED CALIBER (MICROCOLON) IN A NEWBORN

1. "Apple peel" intestinal atresia S.
2. Berdon S. (megacystis-microcolon-intestinal hypoperistalsis S.)
3. Colon atresia (microcolon to point of atresia)
4. Congenital ileal stenosis, web
5. Distal jejunal atresia (occas. total microcolon of disuse)
6. Hirschsprung disease (aganglionic distal segment may be small)
7. Ileal atresia (total microcolon of disuse)
8. Meconium ileus, esp. with cystic fibrosis {mucoviscidosis} (total microcolon of disuse)
9. Meconium plug S. (entire colon may be slightly small)
10. Microcolon of prematurity
11. Small left colon S. (rectum normal, colon small to splenic flexure)
12. Total aganglionosis coli (entire colon may be slightly small—question mark colon)

Gamut G-96**CECAL LESION****COMMON**

1. Amebiasis
2. Appendiceal stump or lesion (See G-81)
3. Carcinoma
4. Crohn's disease
5. [Fecal matter; pill; food particle; foreign body]
6. Ileocecal valve, normal or fatty ("lipoma"); ileocecal prolapse
7. Ileocecal intussusception (eg, idiopathic; lymphoma; Meckel's diverticulum; appendix)
8. Polyp_g
9. Ulcerative colitis
10. Volvulus

UNCOMMON

1. Actinomycosis
2. Benign neoplasm (esp. villous adenoma; angioma; gastrointestinal stromal tumor_g; lipoma)
3. Carcinoid
4. Cathartic abuse
5. Cecal diaphragm, web, or adhesion
6. Cytomegalovirus infection (esp. in AIDS)
7. Diverticulosis; diverticulitis
8. Duplication
9. Endometriosis
10. Enterolith
11. Foreign body perforation
12. [Gallstone]
13. Ileus of cecum
14. Lymphoma_g (incl. Burkitt lymphoma)
15. Metastasis (esp. colon, stomach, pancreas, ovary)
16. Parasitic disease, other (eg, schistosomiasis; strongyloidiasis; ascariasis; trichuriasis; anisakiasis; helminthoma; angiostrongyliasis costaricensis)
17. Pneumatosis cystoides intestinalis
18. Tuberculosis
19. Typhlitis
20. Typhoid fever
21. Ulcer, solitary
22. *Yersinia* enterocolitis

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-97**CONICAL OR CONTRACTED CECUM****COMMON**

1. Amebiasis
2. Appendicitis; appendiceal abscess
3. Crohn's disease

UNCOMMON

1. Actinomycosis; South American blastomycosis
2. Anisakiasis; angiostrongyliasis costaricensis
3. Carcinoma
4. Cathartic abuse
5. Cytomegalovirus colitis (esp. in AIDS)
6. Diverticulitis of cecum (esp. following perforation)
7. Idiopathic
8. Lymphoma_g; leukemia (esp. in children after treatment)
9. Metastatic disease (eg, from carcinoma of stomach, colon, pancreas, ovary)
10. Radiation therapy
11. Tuberculosis (Stierlin sign)
12. Typhlitis
13. Typhoid fever
14. Ulcerative colitis
15. *Yersinia* enterocolitis

Gamut G-98**ENLARGEMENT OF THE ILEOCECAL VALVE****COMMON**

1. Amebiasis
2. Crohn's disease
3. Fatty infiltration (lipomatosis)
4. Intussusception
5. Neoplasm, benign or malignant (esp. villous adenoma; polyp_g; lipoma; carcinoid; adenocarcinoma; lymphoma_g)
6. Normal variant ("hypertrophy")

UNCOMMON

1. Actinomycosis
2. Anisakiasis
3. Cathartic abuse
4. Foreign body, impacted
5. Gallstone, impacted
6. Ileocolic prolapse
7. Intramural hematoma
8. Lymphoid hyperplasia
9. Tuberculosis
10. Typhoid fever
11. Ulcerative colitis
12. *Yersinia* enterocolitis

Reference

**ANTERIOR INDENTATION ON THE
RECTOSIGMOID JUNCTION**

COMMON

1. Abscess, pelvic (eg, bacterial; PID; amebiasis; schistosomiasis; LGV)
2. Ascites (in erect position)
3. Carcinoma of ovary, cervix, uterus, bladder, or rectosigmoid colon
4. Endometriosis
5. Extrinsic pelvic neoplasm, other (eg, teratoma; dermoid or other ovarian cyst; uterine fibroid)
6. Metastasis, peritoneal (Blumer shelf) (esp. from carcinoma of colon, stomach, pancreas, ovary)

UNCOMMON

1. Aneurysm of internal iliac artery
2. Hematoma
3. Hydatid cyst
4. Lymphocele
5. Lymphoma^g; other lymphadenopathy
6. Pelvic lipomatosis
7. Postsurgical sling repair for rectal prolapse
8. Rectovaginal fistula (eg, LGV) (See G-101)
9. Retroperitoneal fibrosis
10. Urinoma
11. Vaginal lesion (eg, carcinoma; hematocolpos)

**RECTAL DISEASE
ON BARIUM ENEMA**

COMMON

1. Abscess
2. Carcinoma (adenocarcinoma; scirrhous; cloacogenic; anal)
3. Congenital anomaly (eg, Hirschsprung disease; imperforate anus)
4. Crohn's disease
5. Endometriosis
6. Metastasis; invasion from adjacent neoplasm
7. Polyp_g
8. Prolapse
9. Radiation proctitis
10. Trauma (sexual; iatrogenic; puerperal or other)
11. Ulcerative colitis
12. Villous adenoma

UNCOMMON

1. Actinomycosis
2. Amyloidosis
3. Bacillary dysentery (shigellosis)
4. Carcinoïd
5. Colitis cystica profunda
6. Diverticulitis
7. Ischemic colitis
8. Lymphogranuloma venereum (*Chlamydia* infection)
9. Lymphoma^g
10. Neoplasm, benign (eg, gastrointestinal stromal tumor^g; lipoma; angioma)
11. Opportunistic infection (eg, herpes)
12. Parasitic disease (esp. amebiasis; schistosomiasis; trichuriasis; Chagas' disease)
13. Pelvic lipomatosis
14. Pneumatosis cystoides intestinalis
15. Proctitis (idiopathic; gonorrhreal; chemical—paraldehyde)
16. Retroperitoneal fibrosis

17. Solitary rectal ulcer syndrome
18. Tuberculosis
19. Varices; hemorrhoids

RECTOVAGINAL FISTULA

COMMON

1. Crohn's disease
2. Diverticulitis
3. Lymphogranuloma venereum (*Chlamydia* infection)
4. Neoplasm, malignant (eg, carcinoma of rectum, cervix, or vagina; other pelvic carcinoma)
5. Radiation therapy
6. Trauma (external; sexual; puerperal; iatrogenic)

UNCOMMON

1. Abscess (eg, appendiceal; tubovarian; perirectal)
2. Actinomycosis
3. Endometriosis
4. Foreign body perforation
5. Imperforate anus or other cloacal anomaly
6. Metastasis
7. Schistosomiasis
8. Tuberculosis
9. Ulcerative colitis

INCREASED RETRORECTAL OR PRESACRAL SPACE (See C-50)

COMMON

1. Abscess, presacral or pelvic (eg, perforated colon from diverticulitis or carcinoma; tubovarian or periappendiceal abscess)
2. Carcinoma of rectum (esp. adenocarcinoma; also scirrhous; cloacogenic; anal)
3. Crohn's disease
4. Diverticulitis
5. Extrinsic soft tissue mass (incl. ovarian cyst or neoplasm; dermoid; teratoma; enteric duplication cyst; tail gut cyst; lipoma)
6. Hematoma (eg, sacral fracture)
7. Lymphadenopathy
8. Metastatic or invasive malignant neoplasm (eg, from bladder, prostate, ovary, cervix)
9. Normal variant
10. Postoperative (eg, resection of rectosigmoid)
11. Radiation proctitis or fibrosis
12. Sacral or coccygeal lesion (eg, metastasis; myeloma; chordoma; osteosarcoma; chondrosarcoma; giant cell tumor; neurofibroma; sacrococcygeal teratoma; hydatid cyst)
13. Trauma (external; sexual; puerperal; iatrogenic—instrumentation)
14. Ulcerative colitis
15. Urinoma

UNCOMMON

1. Amebiasis
2. Amyloidosis of colon
3. Anterior sacral meningocele
4. Colitis cystica profunda; pneumatosis intestinalis
5. Cushing S. (fat deposition)
6. Endometriosis
7. Hemorrhoidal injection
8. Inferior vena cava obstruction (pelvic edema)
9. Inguinal hernia with rectal traction

(continued)

10. Ischemic colitis (See G-69)
11. Lymphocele
12. Lymphogranuloma venereum (*Chlamydia* infection)
13. Lymphoma_g of rectum or retrorectal soft tissues
14. Neoplasm, benign, of soft tissues or rectum (incl. hemangioma; hemangioendothelioma; gastrointestinal stromal tumor_g; lipoma)
15. Pelvic lipomatosis
16. Pneumoretroperitoneum
17. Proctitis (idiopathic; traumatic; gonorrhreal; chemical—paraldehyde)
18. Retroperitoneal fibrosis
19. Sarcoma (eg, rhabdomyosarcoma)
20. Schistosomiasis
21. Tuberculosis

“THUMBPRINTING” OF THE GASTROINTESTINAL TRACT (MULTIPLE INTRAMURAL DEFECTS)

COMMON

1. Crohn’s disease
2. Diverticulitis
3. Ischemic colitis with hemorrhage into bowel wall (See G-69)
4. Ulcerative colitis

UNCOMMON

1. Amyloidosis
2. Angioneurotic edema
3. Carcinoid S.
4. Cytomegalovirus colitis in AIDS
5. Endometriosis
6. Hemolytic-uremic S. (ischemic enterocolitis preceding onset of renal failure in infants)
7. Intramural hematoma or hemorrhage (eg, trauma; hemophilia or other bleeding diathesis; anticoagulant therapy)
8. Lymphoma_g
9. Metastasis, mural or peritoneal
10. Parasitic disease (esp. amebiasis; strongyloidiasis; schistosomiasis; anisakiasis)
11. Pericolic abscess (See G-89)
12. Pneumatosis cystoides intestinalis
13. Pseudomembranous or necrotizing colitis
14. Retractile mesenteritis, other mesenteric or peritoneal lesion (See G-228 to G-231)
15. Toxic megacolon (See G-94)
16. Typhlitis
17. Urticaria (“colon hives” secondary to chronic ischemia; colon obstruction; herpes zoster or *Yersinia* colitis; Chagas’ disease)

NONVISUALIZATION OF THE GALLBLADDER (US, CT, NM)

COMMON

1. [Calcified gallbladder wall (porcelain gallbladder); milk of calcium bile]
2. Cholecystitis (acute or chronic; gangrenous; emphysematous)
3. Contracted gallbladder (esp. postprandial)
4. Prior cholecystectomy
5. Technical factors, esp. on ultrasound (eg, gallbladder obscured by gas; obese patient or thin patient with superficial gallbladder)

UNCOMMON

1. [Anomalous position of gallbladder (eg, ectopic gallbladder; situs inversus)]
2. Biliary atresia
3. Carcinoma of gallbladder
4. Compression by adjacent mass
5. Congenital absence or hypoplasia
6. Fibrosis of gallbladder
7. Hepatization of the gallbladder (sludge-filled)
8. Hyperalimentation; nonfasting patient
9. Metastatic disease involving gallbladder
10. Pregnancy (last trimester)
11. Syndromes (eg, Dubin-Johnson S.; Kawasaki S.; Mirizzi S.)

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-110**ENLARGED GALLBLADDER (US, CT, MRI)****COMMON**

1. Acute cholecystitis with cholelithiasis causing obstruction of cystic or common duct
2. Diabetes
3. Drugs (eg, anticholinergics; narcotics)
4. Hydrops; empyema
5. Hyperalimentation
6. Neoplasm arising in head of pancreas, ampulla of Vater, or lower common bile duct (Courvoisier gallbladder)

(continued)

7. Pancreatitis obstructing Vaterian segment
8. Postvagotomy; postsurgical
9. Pregnancy
10. Prolonged fasting

UNCOMMON

1. Acromegaly
2. AIDS-related cholangiopathy (cytomegalovirus; *Cryptosporidium*)
3. Alcoholism
4. Bedridden patient with chronic illness
5. Chagas' disease
6. Kawasaki S.
7. Leptospirosis
8. Mucocele
9. Normal variant

Gamut G-113

GALLBLADDER DISEASE SECONDARY TO CYSTIC DUCT OR INFUNDIBULUM OBSTRUCTION

COMMON

1. Cholecystitis
2. Hydrops; empyema; mucocele of gallbladder
3. Milk of calcium bile
4. Porcelain gallbladder (calcified gallbladder wall)

UNCOMMON

1. Choledochointeric fistula; gallstone ileus (eg, from gallstone perforation)
2. Emphysematous cholecystitis
3. Ruptured gallbladder

Reference

1. Zeman RK: Cholelithiasis and cholecystitis. In Gore RM, Levine MS (eds): Textbook of Gastrointestinal Radiology. (ed 2) Philadelphia: WB Saunders, 2000, pp 1321–1345

CALCIFICATION IN THE GALLBLADDER OR COMMON BILE DUCT

COMMON

1. Gallstone (eg, calcium bilirubinate or calcium carbonate)
2. [Other right upper quadrant density (eg, stone in kidney or retrocecal appendix; calcified aneurysm; barium in diverticulum)]

UNCOMMON

1. Milk of calcium bile
2. Mucinous adenocarcinoma of gallbladder

3. Porcelain gallbladder
4. Schistosomiasis
5. Stone in common duct or cystic duct remnant

[] This condition does not actually cause the gamuted imaging finding, but can produce similar imaging changes that simulate it.

FIXED POLYPOID LESION(S) OR FILLING DEFECT(S) IN THE GALLBLADDER (US, CT, MRI)

COMMON

- *1. Adenomyoma; adenomyomatosis; hyperplastic cholecystosis
- *2. Cholesterol polyp
- *3. Cholesterolosis (“strawberry” gallbladder)
- *4. Gallstone, adherent
5. [Phrygian cap]

UNCOMMON

- *1. Adenoma (incl. adenomatous polyp; villous adenoma; papilloma; fibroadenoma; cystadenoma)
- *2. Cholecystitis glandularis proliferans
3. Congenital fold or septum
4. Cyst (epithelial; mucous retention)

5. Ectopic pancreatic or gastric tissue
- *6. Hamartomas in Peutz-Jeghers S.
- *7. Inflammatory polyp
8. Metachromatic leukodystrophy
- *9. Metastasis (esp. melanoma)
10. Neoplasm, benign (eg, carcinoid; neurinoma; angioma)
11. Neoplasm, malignant (eg, adenocarcinoma; leiomyosarcoma)
- *12. Parasitic granuloma (eg, *Ascaris*)
13. Postoperative defect
14. [Pseudodeficit in neck of gallbladder; other pseudopolyps]
- *15. Vascular lesion (eg, varix; aneurysm; tortuous artery)
16. Xanthogranulomatous cholecystitis

* May be multiple.

Gamut G-128**GAS IN THE GALLBLADDER
OR BILIARY TRACT****COMMON**

1. Biliary-enteric fistula to duodenum or colon (eg, perforated ulcer or adenocarcinoma of duodenum, ampulla, bile duct, gallbladder, stomach, pancreas, or colon; metastasis; lymphoma_g) (See G-139)
2. Cholecystitis with perforation
3. Emphysematous cholecystitis, cholangitis (esp. in diabetic)
4. [Gas in portal vein]
5. Postoperative (eg, sphincterotomy; biliary-intestinal anastomosis {cholecystoenterostomy; choledochoenterostomy; Whipple procedure}; internal or external biliary drainage)
6. Recent passage of gallstone from gallbladder or common duct (eg, gallstone ileus)

UNCOMMON

1. Common duct entry into duodenal diverticulum
2. Crohn's disease
3. [Gas in gallstone]
4. [Normal periductal fat]
5. Pancreatitis
6. Parasitic disease (clonorchiasis; ascariasis; ruptured amebic abscess of liver; strongyloidiasis of duodenum)
7. Peptic ulcer with perforation into common duct and fistula

Gamut G-129**CONGENITAL DISORDERS
OR SYNDROMES WITH AN
ABNORMAL BILIARY TRACT****COMMON**

1. Asplenia S. (Ivemark S.); polysplenia S.
2. Biliary atresia
3. Caroli disease
4. Choledochal cyst
5. Cystic fibrosis (mucoviscidosis)

UNCOMMON

1. Bardet-Biedl S.
2. Bile duct hypoplasia (Alagille S. or arteriohepatic S.)
3. Bile plug S.
4. Hepatic fibrosis-renal cystic disease

5. Meckel S.
6. Spontaneous (idiopathic) perforation of common bile duct

Gamut G-130

DILATATION OF BILE DUCTS (CAG, MRCP, US, CT, MRI)

COMMON

1. Advanced age
2. Calculus in biliary duct (choledocholithiasis)
3. Chronic pancreatitis
4. Lymphadenopathy with extrinsic compression
5. Neoplasm of pancreas, ampulla of Vater, common duct, or major bile duct (eg, papilloma; adenocarcinoma; mucin-producing cholangiocarcinoma)
6. Papillitis or fibrosis of ampulla of Vater
7. Parasitic disease (eg, ascariasis; clonorchiasis; opisthorchiasis; fascioliasis; hydatid disease)
8. Sclerosing cholangitis
9. Stricture of distal biliary duct (eg, postoperative; intubation; inflammatory; congenital)

UNCOMMON

1. Aneurysm of hepatic artery or aorta (compression)
2. Biliary atresia, extrahepatic
3. Biliary duct web or diaphragm
4. Caroli disease
5. Cholangitis, infectious (eg, AIDS-related; bacterial; parasitic)
6. Choledochal cyst
7. Choledochocoele
8. Diverticulum of duodenum or biliary duct (compression)
9. Duodenal ulcer, penetrating
10. Hepatic fibrosis-renal cystic disease
11. Liver abscess (pyogenic, amebic, or fungal)
12. Liver infarcts following transcatheter embolization of hepatic artery branches
13. Lymphadenopathy in periportal area with ductal compression (eg, metastatic carcinoma of liver, stomach, or pancreas; lymphoma_g; sarcoidosis)
14. Metastasis
15. Mirizzi syndrome
16. Papillitis or fibrosis of ampulla
17. [Periportal edema]
18. Retroperitoneal fibrosis

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-131**BILIARY DILATATION WITHOUT JAUNDICE OR OBSTRUCTION**

1. Advanced age
2. Choledochal cyst (type I)
3. Common duct exploration sequela
4. Early ductal obstruction
5. Nonobstructive gallstone
6. Normal variant
7. Parasitic disease (eg, *Ascaris*; *Clonorchis*; *Fasciola*; *Opisthorchis*; ruptured hydatid cyst or amebic abscess into duct)
8. Postcholecystectomy
9. Post-ductal obstruction
10. Recent passage of stone with ampullary edema

Gamut G-132**BILIARY OBSTRUCTION WITHOUT DILATATION**

1. Acute severe biliary obstruction (first 3 days)
2. Cholangiocarcinoma with tumor encasement
3. Cholangitis (eg, ascending; sclerosing; recurrent pyogenic)
4. Hemobilia
5. Pancreatitis
6. Parasitic disease (eg, solitary or few *Ascaris*, *Clonorchis*, or *Fasciola*; ruptured hydatid cyst or amebic abscess into duct with debris)

Reference

1. Gore RM: Gallbladder and biliary tract disease. In Gore RM, Levine MS (eds): *Textbook of Gastrointestinal Radiology*. (ed 2) Philadelphia: WB Saunders, 2000, pp 1408–1415

Gamut G-133-1**CYSTIC AND SACCULAR LESIONS OF THE BILE DUCTS—WITH NORMAL-SIZED INTRAHEPATIC BILE DUCTS (CAG, MRCP)**

1. Choledochal cyst (common duct)
2. Choledochocoele (intraduodenal)
3. Cystic duct remnant
4. Diverticulum of common duct or rarely, an intrahepatic duct
5. Simple central dilatation of common duct

Gamut G-133-2**CYSTIC AND SACCULAR LESIONS OF THE BILE DUCTS—WITH DILATATION OF INTRAHEPATIC BILE DUCTS (CAG, MRCP)**

1. Bacterial cholangitis with tiny saccular abscesses (acute, suppurative, ascending cholangitis)
2. Caroli disease
3. Choledochal cyst
4. Hepatic fibrosis-renal cystic disease
5. Parasitic disease (esp. opisthorchiasis; also clonorchiasis; ascariasis)
6. Recurrent pyogenic cholangitis (Oriental cholangiohepatitis)

7. Reversible dilatation of intrahepatic bile ducts
8. Sclerosing cholangitis with prestenotic saccular out-pouchings

FILLING DEFECT OR SEGMENTAL LESION IN THE BILE DUCTS (CAG, MRCP, CT)

COMMON

1. Air bubble
2. Calculus
3. Contraction of choledochal sphincter (pseudocalculus) in distal common duct
4. Edema of ampullary segment (eg, after passage of calculus; pancreatitis)
5. Extrinsic vascular impression (eg, right hepatic artery; bile duct varices)
6. Malignant neoplasm of bile duct (cholangiocarcinoma), gallbladder, ampulla, duodenum, or pancreas; hepatocellular carcinoma (hepatoma); Klatskin tumor
7. Stricture (eg, cholangitis or Oriental cholangiohepatitis with dilated ducts and calculi)

UNCOMMON

1. Blood clot
2. Congenital membranous diaphragm (web) of common hepatic duct

3. Debris or mucus in ducts from obstructing tumor or parasites
4. Foreign body or food particle
5. Lymphadenopathy in porta hepatis
6. Metastasis (eg, lung; melanoma; lymphoma_g)
7. Mirizzi syndrome
8. Neoplasm, benign (eg, adenoma; papilloma; carcinoid; gastrointestinal stromal tumor_g; lipoma; hamartoma; polyp)
9. Normal variant (eg, cystic duct insertion; valves of Heister; redundant walls of tortuous duct)
10. Parasite (*Ascaris*; *Clonorchis*; *Fasciola*; hydatid cyst)
11. Pericholedochal adhesions
12. Postoperative defect (eg, plication defect at the site of duct-to-duct anastomosis)
13. Sarcoma botryoides (child)
14. Spasm of sphincter of Oddi

Gamut G-135**THICKENING OF BILE DUCT WALLS (US)****COMMON**

1. AIDS-related cholangiopathy
2. Ascending (bacterial) cholangitis
3. Choledocholithiasis
4. Pancreatitis (common duct)
5. Recurrent pyogenic cholangitis (Oriental cholangiohepatitis)
6. Sclerosing cholangitis

UNCOMMON

1. Cholangiocarcinoma
2. Parasitic disease (liver flukes {clonorchiasis; opisthorchiasis}; ascariasis; schistosomiasis; ruptured amebic hepatic abscess into bile ducts)

References

1. Berger J, Linsell DRM: Thickening of the walls of non-dilated bile ducts. Clin Radiol 1997;52:474–476

Gamut G-136**ECHOES WITHIN THE BILE DUCTS (US)****COMMON**

1. Calculus
2. Hemobilia
3. Pneumobilia
4. Pus
5. Sludge

UNCOMMON

1. Cholangiocarcinoma
2. Feces (via fistula)
3. Food particles (via reflux)
4. Hepatoma
5. Mesenchymal tumor, benign
6. Metastasis
7. Parasites (*Ascaris*; *Clonorchis*; *Fasciola*; hydatid debris)
8. Recurrent pyogenic cholangitis (Oriental cholangiohepatitis)
9. Surgical clips

Gamut G-137**BILE DUCT NARROWING OR OBSTRUCTION (CAG, MRCP)****COMMON**

1. Calculus in biliary duct (choledocholithiasis) (eg, impacted stone in Vaterian segment; papillary edema from recent passage of stone; Mirizzi syndrome)
2. Cholangitis
3. Contraction of choledochal sphincter (pseudocalculus); papillary stenosis
4. Iatrogenic or posttraumatic (eg, surgical injury; trauma; radiation therapy; hepatic artery chemotherapy or embolization)
5. Neoplasm, malignant (eg, cholangiocarcinoma; ampullary, pancreatic, duodenal, or gallbladder carcinoma; hepatocellular carcinoma; Klatskin tumor; villous tumor)
6. Pancreatitis, acute or chronic (incl. pseudocyst)
7. Sclerosing cholangitis

UNCOMMON

1. Abscess (pyogenic, amebic, or fungal)
2. AIDS-related cholangiopathy (eg, cytomegalovirus or *Cryptosporidium* infection)
3. Artifact from post-processing technique of MRCP
4. Biliary hypoplasia or atresia
5. Caroli disease (complicated)
6. Congenital membranous diaphragm (web)
7. Debris or mucus in ducts from obstructing tumor or parasites
8. Duodenal diverticulum
9. Hepatic fibrosis-renal cystic disease
10. Hepatocellular disease, advanced (eg, cirrhosis; cholangiolitic hepatitis)
11. Liver cyst, neoplasm, or abscess
12. Lymphadenopathy in porta hepatis (eg, metastasis; lymphoma_g; tuberculosis; sarcoidosis)
13. Metastasis (esp. from carcinoma of pancreas, gallbladder, stomach)
14. Neoplasm, benign (incl. adenoma; papilloma; gastrointestinal stromal tumor_g; myoblastoma; cystadenoma)
15. Papillitis of ampulla
16. Parasitic disease of bile ducts, liver, or duodenum (esp. ascariasis; clonorchiasis; fascioliasis; hydatid disease; amebic abscess; schistosomiasis; strongyloidiasis)
17. Postbulbar duodenal ulcer with scarring or perforation
18. Recurrent pyogenic cholangitis {Oriental cholangiohepatitis}
19. Stricture, traumatic or iatrogenic (eg, postoperative; intubation)
20. Vascular compression (eg, aneurysm of aorta or hepatic artery; calcified portal vein)

ENLARGED PAPILLA OF VATER**COMMON**

1. Calculus impacted in distal common duct
2. Carcinoma of Vaterian segment
3. Idiopathic; normal variant
4. Mucinous (ductectatic) adenocarcinoma of pancreas
5. Pancreatitis
6. Papillitis

UNCOMMON

1. Edema secondary to active duodenal ulcer
2. Heterotopic pancreatic tissue
3. Neoplasm (eg, adenomatous polyp of papilla; carcinoid; gastrointestinal stromal tumor_g of duodenum)
4. Pancreatic abscess
5. Parasitic disease (eg, strongyloidiasis; ascariasis)
6. Postoperative; instrumentation
7. Zollinger-Ellison syndrome

Gamut G-139

BILIARY-ENTERIC FISTULA (See G-128)

COMMON

1. Cholecystitis (perforative, acute or chronic)
2. Gallstone fistula from gallbladder or bile duct (eg, choledochoduodenal fistula)
3. Malignant neoplasm of gallbladder, bile duct, pancreas, or intestine
4. Postoperative (eg, sphincterotomy; biliary-intestinal anastomosis—Whipple procedure)

UNCOMMON

1. Abscess (pancreatic; hepatic; pericolic; pericholecystic)
2. Common duct entry into duodenal diverticulum
3. Diverticulitis of duodenum or hepatic flexure of colon
4. Granulomatous disease of duodenum or colon (eg, Crohn's disease; tuberculosis; actinomycosis)
5. Lymphoma_g
6. Parasitic disease (esp. amebiasis; ascariasis; hydatid disease)
7. Passage of common duct stone
8. Peptic ulcer perforation into biliary tract
9. [Physiologic reflux at ampulla; incompetent sphincter]
10. Trauma, external or iatrogenic (eg, intubation; ERCP)

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-141-1

HEPATOMEGLAY (See G-141-2)

COMMON

1. Abscess, solitary or multiple (pyogenic, amebic, or fungal)
2. Cirrhosis, early
3. Congenital hepatomegaly (See G-141-2)
4. Cyst (bile duct cyst; simple; posttraumatic; hydatid) (See G-157)

5. Elevated venous pressure (eg, heart failure; constrictive pericarditis; tricuspid stenosis or insufficiency)
6. Fatty change (steatosis) (See G-144)
7. Hemochromatosis
8. Hepatitis (viral, infectious, or serum)
9. Infectious disease, other (eg, infectious mononucleosis; candidiasis; brucellosis; miliary tuberculosis or histoplasmosis; malaria)
10. Metastases
11. Neoplasm (esp. hepatocellular carcinoma {hepatoma}; cholangiocarcinoma; hepatoblastoma; giant hemangioma; hemangioendothelioma; angiosarcoma)
12. Obstruction of common bile duct (biliary cirrhosis) (See G-137)

UNCOMMON

1. Amyloidosis
2. Anemia, primary (eg, thalassemia major)
3. Chronic granulomatous disease of childhood
4. Extramedullary hematopoiesis
5. Gaucher disease; Niemann-Pick disease
6. Glycogen storage disease (eg, type I—von Gierke)
7. Hematoma
8. Hydatid disease (*Echinococcus granulosus* and *E. multilocularis*)
9. Kala-azar
10. Langerhans cell histiocytosis_g
11. Lymphoma_g
12. Myeloid metaplasia; myelofibrosis

CONGENITAL HEPATOMEGALY

COMMON

1. Anemia_g, primary (esp. thalassemia; sickle cell disease)
2. Cystic fibrosis (mucoviscidosis)
3. Gaucher disease; Niemann-Pick disease
4. Glycogen storage disease, types I (von Gierke), III and IV
5. Infant of diabetic mother
6. Langerhans cell histiocytosis_g
7. Mucopolysaccharidoses (esp. Hurler S., Hunter S.); mucolipidosis II (I-cell disease) (See J-4)
8. Polycystic disease of liver

UNCOMMON

1. Aase S.
2. Alagille S. (arteriohepatic S.)
3. Alpha-1-antitrypsin deficiency
4. Beckwith-Wiedemann S.
5. Budd-Chiari S.
6. Chédiak-Higashi S.
7. Cholesterol ester storage disease
8. Chronic granulomatous disease of childhood
9. Congenital transplacental infection (eg, toxoplasmosis; rubella; cytomegalovirus; herpes simplex)
10. Cystinosis
11. Ethanolaminosis
12. Farber disease (lipogranulomatosis)
13. Felty S.
14. Galactosemia
15. Galactosialidosis
16. GM₁ gangliosidosis; fucosidosis; mannosidosis
17. Hepatic fibrosis-renal cystic disease
18. Homocystinuria
19. Hyperlipoproteinemia
20. Infantile multisystem inflammatory disease (NOMID)
21. Lipoatrophic diabetes
22. Mauriac S.
23. Osteopetrosis

(continued)

24. POEMS S.
25. Pyruvate kinase deficiency
26. Sea-blue histiocyte S.
27. Tyrosinemia (type I)
28. Weber-Christian S.
29. Wilson disease
30. Wolman disease (familial xanthomatosis)
31. Zellweger S. (cerebrohepatorenal S.)

3. Taybi H, Lachman RS: Radiology of Syndromes, Metabolic Disorders, and Skeletal Dysplasias. (ed 4) St. Louis: Mosby-Year Book, 1996, p 959

UNCOMMON

1. Amyloidosis
2. Chronic granulomatous disease of childhood
3. Congenital transplacental infection (eg, toxoplasmosis; rubella; cytomegalovirus; herpes simplex; varicella)
4. Granulomas, multiple healed (eg, tuberculosis; histoplasmosis; coccidioidomycosis; brucellosis)
5. Hemochromatosis
6. Hydatid disease (*Echinococcus multilocularis* or multiple calcified *E. granulosus* cysts)
7. Infection, severe (eg, multiple healed abscesses)
8. Pentastomiasis (*Armillifer* infection)
9. [Peritoneal calcifications overlying liver capsule in infancy (eg, meconium peritonitis; ruptured hydro-metrocolpos)]
10. Schistosomiasis (esp. *S. japonica*)
11. [Thorotrust residual]

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-142

DIFFUSE HEPATIC CALCIFICATIONS (PF, US, CT)

COMMON

1. Hyperparathyroidism, secondary (incl. chronic renal failure; uremia; hemodialysis)
2. Ischemia, with or without shock; infarction (chronic)
3. Metastatic disease (eg, mucinous adenocarcinoma of colon, stomach, breast, or thyroid; carcinoma of ovary, pancreas, or lung; islet cell carcinoma; melanoma; neuroblastoma; osteosarcoma; chondrosarcoma; teratoma; also postradiation and post-chemotherapy)
4. [Neoplasm of liver, large, advanced, often necrotic (eg, hepatocellular carcinoma; cholangiocarcinoma; hemangioma; infantile hemangioendothelioma; hepatoblastoma; fibrolamellar carcinoma; mesenchymal hamartoma)—calcifications may be extensive in a localized area or even multifocal, but not truly diffuse]

Gamut G-143**FETAL OR NEONATAL LIVER CALCIFICATION****COMMON**

1. Congenital transplacental infection (eg, toxoplasmosis; rubella; cytomegalovirus; herpes simplex; varicella)
2. Metastatic neuroblastoma
3. [Peritoneal calcifications overlying liver capsule (eg, meconium peritonitis; ruptured hydrometrocolpos)]

UNCOMMON

1. Infarcts
2. Primary liver tumor (eg, hemangioma; hepatoblastoma; infantile hemangioendothelioma; hamartoma; teratoma)
3. Thromboemboli in portal vein [or IVC]

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-144**FATTY CHANGE IN THE LIVER (STEATOSIS) (US, CT, MRI)****COMMON**

- *1. AIDS
- 2. Alcoholism; cirrhosis
- *3. Cystic fibrosis (mucoviscidosis)
- 4. Diabetes mellitus
- *5. Drug therapy (esp. tetracycline; steroids; chemotherapy with cytotoxic agents)
- *6. Idiopathic
- *7. Obesity

UNCOMMON

- 1. Carbon tetrachloride exposure
- *2. Cushing S.
- *3. Fever, prolonged
- *4. Hepatitis, acute or viral
- *5. Hepatotoxins
- 6. Hyperalimentation
- 7. Hyperlipidemia, familial
- 8. Jejunoileal bypass
- *9. Lipoatrophic diabetes (congenital total lipodystrophy)
- *10. Malabsorption syndrome (See G-57)
- 11. Peritoneal dialysis
- 12. Pregnancy
- *13. Reye S.
- *14. Starvation, acute or chronic (incl. malnutrition; kwashiorkor)
- *15. Storage diseases (eg, Gaucher disease; Niemann-Pick disease; glycogen storage disease, type I—von Gierke)

* Children affected.

**GENERALIZED OR MULTIFOCAL
INCREASED ECHOGENICITY
OF THE LIVER ON ULTRASOUND
(HYPERECHOIC)**

COMMON

1. AIDS
2. Fatty infiltration (eg, alcoholism; various toxins; diabetes; malabsorption S.; jejunoleal bypass; protein deficiency; starvation—malnutrition, kwashiorkor; familial hyperlipidemia) (See G-144)
3. Fibrosis of liver parenchyma (eg, alcoholism; cirrhosis; schistosomiasis; chronic hepatitis; glycogen storage disease)
4. Hepatocellular carcinoma (hepatoma), diffuse
5. Hydatid disease (*Echinococcus multilocularis* or multiple healed, calcified *E. granulosus* cysts)
6. Idiopathic
7. Lipoatrophic diabetes
8. Obesity
9. Technical—excessive gain

UNCOMMON

1. Budd-Chiari S. (focal)
2. Carbon tetrachloride exposure
3. Cystic fibrosis (mucoviscidosis)
4. Drug therapy (esp. tetracycline; steroids; chemotherapy)
5. Gaucher disease
6. Hyperalimentation
7. Lipoatrophic diabetes (congenital total lipodystrophy)
8. Lymphoma_g; leukemia
9. Miliary tuberculosis
10. Pregnancy
11. Reye S.
12. Tyrosinemia
13. Wilson disease

Gamut G-154**NEOPLASM OF THE LIVER
(CHILD OR ADULT)****COMMON**

1. Hepatocellular adenoma
2. Cholangiocarcinoma, intrahepatic
3. [Cyst (eg, simple; posttraumatic; hydatid)]
4. Hemangioma (cavernous; capillary)
5. Hepatocellular carcinoma (hepatoma)
6. Metastasis
7. Multiple bile duct hamartoma (von Meyenburg complex) (microbiliary hamartoma)
8. [Nodular regenerative hyperplasia; focal nodular hyperplasia]

UNCOMMON

1. [Adrenal rest]
2. Biliary cystadenoma
3. Carcinoid of liver, primary or metastatic
4. Cholangioma
5. Epithelioid hemangioendothelioma
6. Fibrolamellar carcinoma
7. Gastrointestinal stromal tumor (eg, leiomyoma; fibroma)
8. Mesenchymal hamartoma (child)
9. Infantile hemangioendothelioma of liver (child)
10. Hepatoblastoma
11. Lymphangioma
12. Lymphoma_g
13. [Pancreatic rest]
14. Sarcoma (esp. angiosarcoma; also nonvascular sarcomas; Kaposi sarcoma)
15. [Splenosis]
16. Teratoma

CYSTIC LIVER LESION(S) (US, CT, MRI) (Usually Anechoic or Hypoechoic on US and Low Density on CT)

COMMON

1. Abscess (pyogenic, amebic, or fungal)
2. Cyst, congenital or acquired (eg, epithelial; post-traumatic; hydatid)
3. Cystic metastasis (eg, mucinous adenocarcinoma of colon, stomach; cystadenocarcinoma of pancreas, ovary, or uterus; melanoma, carcinoid, or sarcoma with necrosis)
4. [Chilaидти disease (interposition of colon between liver and diaphragm)]
5. Hematoma, acute
6. Hydatid disease (*Echinococcus granulosus* and *E. multilocularis*)

UNCOMMON

1. Aneurysm of hepatic artery or portal vein
2. Biliary cystadenoma, cystadenocarcinoma
3. Biloma
4. Caroli disease
5. Cat-scratch disease
6. Cholangiocarcinoma

7. Choledochal cyst
8. Cystic duct remnant with mucocele
9. Cystic hepatocellular carcinoma (hepatoma)
10. Cystic lymphangioma, mesenchymal hamartoma, or other unusual cystic or necrotic tumor
11. Intrahepatic gallbladder
12. Mesenchymal hamartoma
13. Multiple bile duct hamartoma (Von Meyenburg complex)
14. Polycystic liver disease
15. Undifferentiated (embryonal) sarcoma
16. Von Hippel-Lindau disease

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-158-1**LIVER LESION CHARACTERIZED BY LINEAR OR STELLATE CENTRAL SCAR (CT, US, ANGIO)**

1. Cholangiocarcinoma
2. Fibrolamellar carcinoma
- *3. Focal nodular hyperplasia
4. Hemangioma, giant cavernous
5. Hepatocellular adenoma
- *6. Hepatocellular carcinoma (hepatoma)
7. Metastasis, hypervascular

* Usually isoechoic mass with hyperechoic linear or stellate central scar on ultrasound.

Gamut G-160**LIVER LESION CHARACTERIZED BY CALCIFICATION****COMMON**

1. Abscess, healed (pyogenic, amebic, or fungal)
2. Calculus(i) in biliary tract
3. Granuloma (eg, tuberculosis; histoplasmosis; coccidioidomycosis; brucellosis)
4. Hemangioma, cavernous
5. Hematoma, old
6. Hepatocellular carcinoma (hepatoma), esp. treated
7. Hydatid disease (*Echinococcus granulosus* or *E. multilocularis*)
8. Metastases (eg, from osteosarcoma; chondrosarcoma; mucinous or colloid adenocarcinoma of colon, rectum, ovary, breast, pancreas, stomach, or thyroid; islet cell carcinoma; carcinoid; teratocarcinoma; leiomyosarcoma; neuroblastoma; pheochromocytoma; treated melanoma or lymphoma)

UNCOMMON

1. Biliary cystadenocarcinoma
2. Calcified gallbladder (porcelain gallbladder)
3. Calcified hepatic artery (incl. aneurysm)
4. Cholangiocarcinoma
5. Cyst, nonparasitic, congenital or acquired
6. Fibrolamellar carcinoma
7. Gumma (hepar lobatum)
8. Hemangioendothelioma (epithelioid or infantile)
9. Hepatoblastoma
10. Hepatocellular adenoma
11. Mesenchymal hamartoma
12. Regenerating nodules in cirrhosis (rarely)

13. Schistosomiasis (tortoiseback appearance, esp. *S. japonica*)
14. Thromboembolus of portal vein, calcified

**LIVER LESIONS—CLINICAL
CONSIDERATIONS**

Nonsurgical Liver Lesions

1. Abscess (except for possible drainage)
2. Cyst (eg, simple; posttraumatic; hydatid)
3. Fatty liver
4. Focal nodular hyperplasia
5. Hemangioma

Painless Liver Lesions

1. Cyst (eg, simple; hydatid)
2. Focal nodular hyperplasia
3. Hemangioma
4. Hepatocellular adenoma (small)

Liver Lesions Related to Excessive Steroids

1. Focal nodular hyperplasia
2. Hemangioma
3. Hepatocellular adenoma
4. Hepatocellular carcinoma (hepatoma)
5. Nodular regenerative hyperplasia

Liver Neoplasms With Elevated Alpha Fetal Protein (AFP)

1. Hepatoblastoma
2. Hepatocellular carcinoma (hepatoma)

Sex Predilection for Liver Neoplasms

1. Hepatic neoplasm is usually benign in women
2. Hepatic neoplasm is usually malignant in men

Reference

1. Ros PR, Taylor HM: Benign and malignant tumors of the liver. In: Gore RM, Levine MS: Textbook of Gastrointestinal Radiology. (ed 2) Philadelphia: WB Saunders, 2000, pp 1487–1568

Gamut G-166

LIVER METASTASES—CALCIFIED

COMMON

1. Endocrine carcinoma of pancreas (esp. islet cell tumor)
2. Malignant melanoma
3. Medullary or colloid carcinoma of breast or thyroid
4. Mucinous adenocarcinoma of colon or stomach
5. Neuroblastoma
6. Papillary serous cystadenocarcinoma of ovary
7. Sarcoma (esp. osteosarcoma; chondrosarcoma; leiomyosarcoma)

UNCOMMON

1. Carcinoma of lung or testis
2. Lymphoma_g, treated

3. Mesothelioma
4. Renal cell carcinoma

References

1. Burgener FA, Kormano M: Differential Diagnosis in Computed Tomography. New York: Thieme, 1996

Gamut G-167

LIVER METASTASES—HYPERVASCULAR

COMMON

1. Carcinoid
2. Carcinoma of breast
3. Carcinoma of colon
4. Choriocarcinoma
5. Endocrine carcinoma of pancreas (esp. islet cell tumor)
6. Malignant melanoma
7. Renal cell carcinoma (hypernephroma)

UNCOMMON

1. Cystadenocarcinoma of ovary
2. Pheochromocytoma
3. Sarcoma (esp. osteosarcoma; chondrosarcoma; leiomyosarcoma)

References

1. Dähnert W: Radiology Review Manual. (ed 4) Baltimore: Williams & Wilkins, 1999, p 596

Gamut G-168

LIVER METASTASES—HEMORRHAGIC

COMMON

1. Carcinoma of breast
2. Carcinoma of colon
3. Carcinoma of thyroid
4. Choriocarcinoma
5. Malignant melanoma
6. Renal cell carcinoma (hypernephroma)

References

1. Dähnert W: Radiology Review Manual. (ed 4) Baltimore: Williams & Wilkins, 1999, p 597

Gamut G-169

LIVER METASTASES—CYSTIC

COMMON

1. Carcinoma of colon
2. Choriocarcinoma
3. Malignant melanoma
4. Mucinous carcinoma of ovary
5. Sarcoma (eg, osteosarcoma; chondrosarcoma; leiomyosarcoma)

UNCOMMON

1. Carcinoid
2. Carcinoma of lung (esp. small cell)
3. Carcinoma of stomach
4. Endometrial carcinoma of uterus

Reference

1. Dähnert W: Radiology Review Manual. (ed 4) Baltimore: Williams & Wilkins, 1999, p 597

Gamut G-170

LIVER METASTASES—ULTRASOUND CHARACTERISTICS

HYPOECHOIC LESIONS (37.5%)

COMMON

1. Carcinoma of breast
2. Carcinoma of pancreas (36%)
3. Carcinoma of cervix (20%)
4. Lymphoma_g

UNCOMMON

1. Adenocarcinoma of lung
2. Carcinoma of nasopharynx

MIXED ECHOGENICITY (37.5%)

COMMON

1. Carcinoma of breast
2. Carcinoma of rectum
3. Carcinoma of lung
4. Carcinoma of stomach
5. Hepatocellular carcinoma (hepatoma)

UNCOMMON

1. Anaplastic carcinoma
2. Carcinoma of cervix
3. Vascular primaries (carcinoïd; islet cell carcinoma of pancreas; choriocarcinoma; renal cell carcinoma)

HYPERECHOIC LESIONS WITH SHADOWING (25%)

COMMON

1. Adenocarcinoma of stomach
2. Cystadenocarcinoma of pancreas
3. Melanoma
4. Mucinous or colloid carcinoma of colon or breast
5. Pseudomucinous cystadenocarcinoma of ovary

UNCOMMON

1. Chondrosarcoma
2. Neuroblastoma
3. Osteosarcoma
4. Teratocarcinoma

CYSTIC METASTASES (See G-169)

1. Central necrosis of any malignant lesion, esp. sarcomas
2. Mucin-secreting metastases from carcinoma of the ovary, colon, pancreas, or stomach

BULL'S-EYE OR TARGET PATTERN

1. Carcinoma of lung
2. Other carcinomas (occasionally)

INFILTRATIVE PATTERN

1. Carcinoma of breast
2. Carcinoma of lung
3. Melanoma

References

Gamut G-171**AVASCULAR OR HYPOVASCULAR LIVER LESION
(ANGIO, POSTCONTRAST CT OR MRI)****COMMON**

- *1. Abscess (eg, pyogenic, amebic, or fungal)
- 2. Cholangiocarcinoma
- *3. Cyst (congenital; inflammatory; hydatid; traumatic)
- 4. [Extrinsic mass (eg, gallbladder; adrenal neoplasm; subphrenic abscess)]
- *5. Focal fatty change
- *6. Metastasis

UNCOMMON

- 1. Adrenal rest
- 2. [Biloma, traumatic or iatrogenic (eg, needle biopsy)]
- 3. Hematoma
- *4. Lymphoma^g
- 5. Mesenchymal hamartoma
- 6. Neoplasm, benign or malignant, other (eg, gastrointestinal stromal tumor^g; teratoma; lipoma)
- *7. Polycystic disease of liver

* May be multiple.

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-172

HYPERVERSULAR OR HYPERDENSE LIVER LESION (ANGIO, POSTCONTRAST CT OR MRI)

COMMON

- *1. Focal fatty sparing (simulates enhancing mass)
- *2. Focal nodular hyperplasia
- *3. Hemangioma, cavernous or capillary
- 4. Hepatoblastoma
- 5. Hepatocellular adenoma
- 6. Hepatocellular carcinoma (hepatoma)
- *7. Metastasis, hypervasular (eg, carcinoid; islet cell tumor of pancreas; pheochromocytoma; leiomyosarcoma; other sarcomas; choriocarcinoma; carcinoma of breast, colon, kidney, or thyroid; malignant melanoma)

UNCOMMON

- 1. Aneurysm of hepatic artery, true or false (incl. arteriobiliary fistula) or portal vein
- 2. Angiosarcoma of liver
- *3. Arteriovenous fistula (eg, congenital; traumatic; iatrogenic); arterio-portal shunt in some hepatomas
- 4. Fibrolamellar carcinoma
- 5. Hemangioendothelioma, epithelioid
- 6. Vascular phenomena (eg, SVC obstruction; Budd-Chiari S.; transient hepatic attenuation difference {THAD})

* May be multiple.

Gamut G-173

ANECHOIC LIVER LESION (USUALLY CYSTIC ON US)

COMMON

- *1. Caroli disease
- *2. Congenital simple cyst
- 3. Metastasis, cystic (eg, from mucinous carcinoma of colon; carcinoma of stomach or uterus; cystadenocarcinoma of ovary or pancreas; squamous cell carcinoma, esp. bronchogenic; carcinoid; malignant melanoma; sarcoma, esp. leiomyosarcoma)
- *4. Polycystic liver disease

UNCOMMON

- 1. Abscess (pyogenic, amebic, or fungal)
- *2. Acquired cyst (eg, posttraumatic; inflammatory)
- *3. Aneurysm of hepatic artery or portal vein
- 4. Biliary cystadenoma, cystadenocarcinoma
- *5. Biloma
- *6. [Chilaiditi disease (interposition of colon between liver and diaphragm)]
- *7. Choledochal cyst
- 8. Cystic or necrotic neoplasm
- *9. Cystic duct remnant with mucocele
- 10. Hematoma, acute
- 11. Hydatid cyst
- *12. Intrahepatic gallbladder
- 13. Lymphoma_g

* Usually unilocular with smooth walls and distal acoustic enhancement.
[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-174**HYPOECHOIC LIVER LESION (US)****COMMON**

1. Abscess (pyogenic, amebic, or fungal)
2. Cyst, complicated (eg, with cholesterol crystals)
- *3. Cystic liver tumor (eg, cholangiocarcinoma; biliary cystadenoma or cystadenocarcinoma; lymphangioma; mesenchymal hamartoma)
- +4. Focal nodular hyperplasia
5. Hematoma, acute
- +6. Hepatocellular carcinoma (hepatoma)
7. Infarct
8. Lymphoma^g; Burkitt lymphoma
- +9. Metastasis, incl. cystic metastasis (eg, from carcinoma of breast, lung, colon, stomach, ovary, pancreas)

UNCOMMON

1. Biloma
- +2. Candidiasis (wheel within a wheel)
3. Extramedullary hematopoiesis
4. Focal hepatic necrosis
5. Focal sparing in fatty liver (steatosis)
6. Granuloma (eg, tuberculosis)
7. Hemangioendothelioma of liver
8. Hemangioma, cavernous (more often hyperechoic)

+9. Hepatocellular adenoma***10. Hydatid disease (*Echinococcus granulosus* or *E. multilocularis*)**

* Usually a multicystic image on ultrasound.

+ Hepatic mass with hypoechoic halo.

Gamut G-175**HYPERECHOIC LIVER LESION (US)****COMMON**

1. Cirrhosis (multifocal regenerating nodules)
2. Focal fatty infiltration (focal steatosis)
- *3. Hemangioma
4. Hepatocellular adenoma
- *5. Hepatocellular carcinoma (hepatoma)
6. Lipoma
7. Metastasis {esp. from carcinoma of colon, stomach, ovary, kidney or pancreas {incl. islet cell carcinoma}; carcinoid*; choriocarcinoma}

UNCOMMON

1. Angiomyolipoma
2. Debris inside abscess or hematoma
3. Dysplastic nodule
4. Focal nodular hyperplasia
- *5. Hemangioendothelioma
6. Hepatic fissure

(continued)

7. Hydatid disease (old healed, calcified *E. granulosus* cyst; *Echinococcus multilocularis*—multifocal)
8. Infection (eg, cytomegalovirus or *Candida*)
9. Lymphoma^g
10. Omentum inserted into bed of hepatic resection
- *11. Peliosis hepatitis
12. Postradiation therapy
13. Solitary fibrous tumor of the liver

* Hyperechoic hepatic mass(es) with punctate calcifications and/or acoustic enhancement on ultrasound.

Gamut G-177

HETEROGENEOUS HEPATIC ECHOGENICITY ON ULTRASOUND (COMPLEX HEPATIC MASS OR DIFFUSE PARENCHYMAL INVOLVEMENT)

COMMON

1. Abscess
2. Cavernous hemangioma
- *3. Cirrhosis
- *4. Fatty change in liver
5. Focal nodular hyperplasia
6. Hepatocellular carcinoma (hepatoma)
7. Hydatid cyst (with collapsed daughter cysts)
- *8. Metastasis with mixed echogenicity or diffuse infiltration (eg, from carcinoma of breast, lung, or ovary; melanoma)
9. Neoplasm with liquefaction necrosis (hypoechoic) and infarcted nonliquefied areas (hyperechoic)

UNCOMMON

1. Biliary cystadenoma
2. Cholangiocarcinoma
3. Hemangioendothelioma; angiosarcoma
4. Hepatic adenoma, esp. after oral contraceptive use, or in glycogen storage disease, type I (von Gierke disease)
5. Hepatoblastoma
- *6. Peliosis hepatitis

* Usually generalized or multifocal.

Gamut G178-S**HEPATIC PSEUDOLESION (US)**

1. Diaphragmatic leaflets: peripheral echogenic pseudolesion may simulate hemangiomas
2. Falciform ligament: echogenic “mass” (pseudolesion) in left lobe
3. Focal fatty infiltration: echogenic pseudolesion may simulate metastases
4. Focal hepatic sparing in steatosis: hypoechoic pseudolesion often seen in porta hepatis
5. Gallbladder inflammation: hypoechoic hepatic pseudolesion in adjacent parenchyma
6. Ligamentum venosum: fibrous tissue attenuates sound, causing hypoechoic pseudolesion in caudate lobe
7. Perihepatic fat may invaginate liver causing hyper-echoic masses

Gamut G-179**INTRAHEPATIC ACOUSTIC SHADOWING (LINEAR VERSUS FOCAL) ON US****LINEAR OR BRANCHING SHADOWING**

1. Air in biliary tract
2. Air in portal vein
3. Calculi in biliary ducts

FOCAL SHADOWING

1. Calcification (eg, primary or metastatic tumor; granuloma; healed abscess; aneurysm)
2. Foreign material (eg, surgical clips, drains, catheters, stents, sponges)

3. Gas (eg, in abscess; necrotic tumor; sequela of tumor embolization or biopsy)
4. Parasites in bile ducts (eg, *Clonorchis*; *Ascaris*; *Fasciola*) (may also show linear shadowing)
5. Parasitic disease in liver parenchyma (eg, hydatid disease; amebic abscess; pentastomiasis (*Armillifer* infection))
6. Refractile artifacts (eg, junction of vessels; gallbladder neck)

Gamut G-180**FOCAL LOW DENSITY (DECREASED ATTENUATION) LIVER LESION (NONENHANCED CT)****COMMON**

1. Abscess (pyogenic, amebic, or fungal)
2. Cyst (eg, congenital; epithelial; posttraumatic; hydatid)
3. Focal fatty infiltration (focal steatosis)
4. Focal nodular hyperplasia
5. Hemangioma
6. Hematoma; laceration (posttraumatic)
7. Hepatocellular adenoma
8. Hepatocellular carcinoma (hepatoma)
9. Hydatid disease (*Echinococcus granulosus* and *E. multilocularis*)
10. Lymphoma^g
11. Metastasis (esp. from carcinoma of lung, breast, colon, kidney)

(continued)

UNCOMMON

1. Angiosarcoma of liver (may have high density regions with hemorrhage)
2. Biliary cystadenoma, cystadenocarcinoma (near water density on CT)
3. Biloma
4. Caroli disease
5. Cholangiocarcinoma
6. Choledochal cyst
7. Fibrolamellar carcinoma
8. Fungus disease with multiple microabscesses (eg, *Candida*; *Cryptococcus*)
9. Hemangioendothelioma
10. Hepatoblastoma
11. Infarct
12. Mesenchymal hamartoma
13. Multiple bile duct hamartoma
14. Polycystic liver disease
15. Radiation therapy (fatty replacement)
16. Schistosomiasis
17. Von Hippel-Lindau disease

Gamut G-181

FOCAL LOW DENSITY LIVER LESION (POSTCONTRAST CT)

COMMON

1. Abscess (pyogenic, amebic, or fungal)
2. Cyst (eg, congenital; epithelial; posttraumatic; hydatid)
3. Focal fatty infiltration (focal steatosis)
4. Hemangioma, giant
5. Hematoma
6. Hydatid disease (*Echinococcus granulosus* and *E. multilocularis*)

7. Metastasis (esp. from carcinoma of lung, breast, colon, kidney)
8. Regenerating nodules

UNCOMMON

1. Biloma
2. Caroli disease
3. Cholangiocarcinoma (late enhancement)
4. Fungus disease with multiple microabscesses (eg, *Candida*; *Cryptococcus*)
5. Lymphangioma
6. Polycystic liver disease
7. Radiation therapy (fatty replacement)
8. Schistosomiasis
9. Von Hippel-Lindau disease

Gamut G-182

FOCAL HIGH DENSITY LIVER LESION (NONENHANCED CT)

1. Granuloma (esp. tuberculoma)
2. Hematoma, subcapsular or intrahepatic (first few days)
3. Hepatic tumor (eg, hepatocellular carcinoma {hepatoma}; hepatoblastoma; hemangioendothelioma)
4. Hepatocellular adenoma with acute hemorrhage
5. Hydatid disease (old healed, calcified *E. granulosus* cyst; *Echinococcus multilocularis*—with calcification)
6. Metastasis with calcification (eg, from colon, rectum, stomach, ovary)

LIVER LESIONS WITH CIRCUMFERENTIAL RIM ON MRI

HYPPOINTENSE RIM ON T1-WEIGHTED IMAGE

- Abscess, pyogenic or amebic (concentric rims; rim of collagen)
- Hematoma, chronic (hemosiderin)
- Hepatocellular carcinoma (hepatoma) (pseudo-capsular rim is thin)
- Hydatid cyst (thick, homogeneous rim; no perilesional edema)

HYPPOINTENSE RIM ON T2-WEIGHTED IMAGE

- Abscess, pyogenic or amebic (one or two concentric rings of mixed signal intensity)
- Hematoma, subacute to chronic (white rim also seen on T1-weighted images)
- Hydatid cyst (thick, homogeneous rim; no perilesional edema; high signal cyst contents on T2)
- Metastasis (peritumoral edema with double ring pattern)

NO RIM

- Cavernous hemangioma
- Cyst, simple

(continued)

3. Focal nodular hyperplasia
4. Hepatocellular adenoma

Gamut G-188**HEPATIC VEIN DILATATION****COMMON**

1. Constrictive pericarditis
2. Inferior vena cava obstruction or thrombus
3. Normal with Valsalva maneuver in young patient
4. Right-sided congestive heart failure
5. Thrombus in hepatic vein
6. Tricuspid atresia or stenosis

UNCOMMON

1. Right atrial tumor

Reference

1. Gore RM, Marn CS, Baron RL: Vascular disorders of the liver and splanchnic circulation. In: Gore RM, Levine MS (eds): Textbook of Gastrointestinal Radiology. (ed 2) Philadelphia: WB Saunders, 2000, pp 1639–1668

Gamut G-189**HEPATIC VEIN THROMBOEMBOLISM
OR OBSTRUCTION (BUDD-CHIARI S.)
(INCL. OBSTRUCTION OF UPPER
INFERIOR VENA CAVA)****COMMON**

1. Cirrhosis
2. Heart failure
3. Idiopathic
4. Neoplasm invading inferior vena cava (esp. renal cell carcinoma; hepatocellular carcinoma)
5. Thrombophlebitis

UNCOMMON

1. Alkaloid ingestion (bush tea disease)
2. Behcet syndrome

3. Coagulopathy (incl. polycythemia vera; sickle cell disease)
4. Iatrogenic (eg, catheterization; vena cavography)
5. Infection of liver (eg, aspergillosis)
6. Intravenous web
7. Metastasis, hepatic
8. Neoplastic compression (eg, carcinoma of pancreas; retroperitoneal sarcoma; lymphoma_g)
9. Oral contraceptive use
10. Parasitic disease (eg, amebic liver abscess; schistosomiasis; hydatid disease)
11. Postoperative (eg, splenectomy)
12. Pregnancy; postpartum
13. Trauma

Gamut G-190**PORTAL VEIN THROMBOSIS
OR OBSTRUCTION*****COMMON**

1. Cirrhosis plus portal hypertension
2. Extrinsic compression or invasion by carcinoma of pancreas or stomach; lymphadenopathy of porta hepatis
3. Hepatocellular carcinoma (hepatoma) or cholangiocarcinoma (tumor thrombus or invasion)
4. Hypercoagulable state (eg, blood dyscrasia; clotting disorder; polycythemia vera; protein c or s deficiency; paroxysmal nocturnal hemoglobinuria)

(continued)

5. Iatrogenic (eg, TIPS; umbilical venous catheterization; estrogen therapy; oral contraceptive use)
6. Idiopathic
7. Neonatal sepsis; perinatal omphalitis
8. Pancreatitis
9. Postoperative (esp. postsplenectomy)
10. Schistosomiasis (periportal fibrosis causing presinusoidal intrahepatic obstruction)
11. Sclerosing cholangitis

UNCOMMON

1. Behçet S.
2. [Budd-Chiari S. causing reversal of portal venous blood return]
3. Dehydration, severe
4. Liver transplantation
5. Portal phlebitis (from abdominal infection)
6. Postpartum
7. Trauma

* May result in cavernous transformation of portal vein.

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

GAS IN THE PORTAL VEINS

COMMON

1. Abscess, abdominal or pelvic (eg, gas abscess of pancreas; diverticulitis)
2. [Gas in the biliary tract]
3. Iatrogenic (eg, catheterization of umbilical or mesenteric artery or vein; percutaneous abscess drainage; hydrogen peroxide enema or gastric lavage; post-hepatic artery embolization)
4. Mechanical bowel obstruction with ischemia (incl. closed loop obstruction)
5. Mesenteric ischemia or occlusion and bowel infarction (See G-69)
6. Necrotizing enterocolitis

UNCOMMON

1. Acute gastric dilatation
2. Carcinoma of colon, necrotic
3. Corrosive ingestion causing gastritis
4. Diabetic acidosis or coma
5. Emphysematous cholecystitis
6. Erythroblastosis fetalis
7. Gastric emphysema
8. Hemorrhagic pancreatitis

9. Neonatal gastroenteritis
10. Peptic ulcer eroding into mesenteric vein
11. Postcolonoscopy or post-air contrast barium enema in inflammatory bowel disease (eg, diverticulitis; Crohn's disease; ulcerative colitis;)
12. Postoperative (eg, bowel resection; operation for congenital bowel obstruction)
13. Pseudomembranous colitis
14. Sepsis
15. Toxic megacolon

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

SOLITARY LESION OF THE SPLEEN (US, CT, MRI)

COMMON

1. Aneurysm of splenic artery
2. Cyst (congenital; epidermoid; dermoid or teratoma; hydatid; traumatic)
3. Hemangioma, cavernous or capillary
4. Hematoma (posttraumatic)
5. Infarct (esp. sickle cell disease)
6. Lymphoma_g; leukemia

UNCOMMON

1. Abscess (pyogenic; *Candida*; *Pneumocystis carinii*)
2. Arteriovenous malformation
3. Cystic lymphangioma
4. Hamartoma
5. Hemangiosarcoma

Gamut G-206

FOCAL CYSTIC OR LOW DENSITY SPLENIC LESION (CT, MRI—USUALLY HYPOECHOIC ON US)

COMMON

1. Abscess (pyogenic; *Candida*; *Pneumocystis carinii*)
2. Aneurysm of splenic artery
3. Cyst (congenital; epidermoid; dermoid or teratoma; hydatid; posttraumatic)
4. Hematoma
5. Infarction

UNCOMMON

1. Cystic lymphangioma
2. Hamartoma
3. Hemangioma, cavernous or capillary

(continued)

4. Hemangiosarcoma
5. Metastasis
6. Peliosis
7. Pseudocyst (secondary to pancreatitis)

Gamut G-211

ABNORMALITY ON SPLENIC ARTERIOGRAPHY

COMMON

1. Accessory spleen
2. Anomalous origin of splenic or celiac artery
3. Splenic artery arteriosclerosis; aneurysm; fibromuscular hyperplasia (incl. stenosis; occlusion)
4. Splenic vein abnormality (See G-212)

UNCOMMON

1. Arteriovenous fistula; angiomatic malformation
2. Avascular mass
 - a. Abscess
 - b. Cyst (eg, dermoid; epidermoid; hydatid; post-traumatic)
 - c. Infarction
 - d. Lymphoma_g
 - e. Metastasis
3. Displacement by extrinsic mass
4. Splenic artery encasement (eg, pancreatic carcinoma)
5. Splenic laceration; pericapsular hematoma
6. Thromboembolism
7. Vascular mass (eg, metastasis, esp. melanoma; hemangiosarcoma of spleen)

Gamut G-212**SPLENIC VEIN OBSTRUCTION (US,
POSTCONTRAST CT, MRI, OR ANGIO)****COMMON**

1. Lymphadenopathy (eg, lymphoma_g; metastases)
2. Neoplasm (eg, pancreatic; retroperitoneal sarcoma)
3. Pancreatitis (incl. pancreatic pseudocyst)
4. Thromboembolism of portal or splenic vein
(esp. portal hypertension; polycythemia vera; heart failure)

UNCOMMON

1. Aneurysm of splenic artery or aorta
2. Postoperative
3. Retroperitoneal inflammation
4. Schistosomiasis
5. Trauma; hematoma

Gamut G-214

CYSTIC OR LOW DENSITY PANCREATIC LESION (CT, MRI—HYPOECHOIC ON US)

COMMON

1. Acute pancreatitis, focal
2. Chronic pancreatitis (inhomogeneous, often hyper-echoic)
3. Fluid collection, peripancreatic
4. Mucinous cystadenoma or cystadenocarcinoma (macrocystic adenoma)
5. Pancreatic duct dilatation, ectasia, or obstruction (from carcinoma; calculus; stricture)
6. Pancreatic ductal adenocarcinoma (eg, duct ectatic mucinous adenocarcinoma; papillary intraductal adenocarcinoma; anaplastic adenocarcinoma)
7. Pseudocyst of pancreas
8. Serous cystadenoma (microcystic adenoma)

UNCOMMON

1. Abscess_g
2. [Aneurysm or pseudoaneurysm of aorta, pancreaticoduodenal arcade, or splenic artery]
3. [Biloma]
4. [Cystic lymphangioma, retroperitoneal]
5. Cystic teratoma
6. Cysts, congenital (in adult polycystic kidney disease; Von Hippel-Lindau disease; or cystic fibrosis)
7. [Duodenal cyst or diverticulum]
8. Hemangioma
9. Hematoma
10. Hydatid cyst
11. Islet cell tumor or insulinoma, cystic
12. Liquefaction necrosis of pancreas
13. Lymphoma_g
14. Metastasis, cystic (eg, renal cell carcinoma; hepatoma; carcinoma of lung, breast, or ovary; melanoma)
15. Posttraumatic cyst

16. Solid and papillary epithelial neoplasm
17. [Varix of left renal vein]

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

PANCREATIC LESION CHARACTERIZED BY CALCIFICATION

COMMON

1. [Aneurysm of aorta, pancreaticoduodenal arcade, or splenic artery, thrombosed]
2. Chronic pancreatitis, focal
3. Hemorrhage, intraparenchymal (eg, old abscess; hematoma; infarction)

UNCOMMON

1. Adenocarcinoma of pancreas (rarely)
2. Hemangioma (plebolith)
3. Hydatid cyst
4. Islet cell tumor
5. Lymphangioma, cavernous
6. Lymphoma (treated)
7. Metastasis (esp. mucinous adenocarcinoma of colon)
8. Mucinous cystadenoma or cystadenocarcinoma (macrocystic adenoma) (peripheral calcium)
9. Pancreaticoblastoma
10. Pseudocyst of pancreas
11. Serous cystadenoma (microcystic adenoma) (central stellate calcium)
12. Solid and papillary epithelial neoplasm
13. Teratoma

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

PANCREATIC ANGIOGRAPHIC ABNORMALITY (VIA CELIAC, SUPERIOR MESENTERIC, OR SUBSELECTIVE ARTERIOGRAPHY)

DISPLACEMENT OF VESSELS

1. Gallbladder enlargement
2. Lymphoma
3. Pancreatic mass (See G-213)

ENCASEMENT

1. Irregular (esp. carcinoma of pancreas)
2. Long segment with arterial cuffing (esp. carcinoma)
3. Smooth (eg, carcinoma; pancreatitis)

EXTRAVASATION

1. Pancreatic abscess
2. Pancreatitis

HYPERVASCULARITY (See G-223)

1. Carcinoma
2. Cystadenoma; cystadenocarcinoma (florid neovascularity)
3. Islet cell tumor, esp. Zollinger-Ellison S.; MEN S. Type I (tumor blush)
4. Pancreatic abscess
5. Pancreatitis

HYPOVASULARITY

1. Lymphoma_g
2. Metastasis

3. Pancreatic pseudocyst
4. Pancreatitis

OTHER

1. Microaneurysms (esp. pancreatitis; polyarteritis nodosa)
2. Occlusion or truncation, arterial or venous (eg, carcinoma; surgical ligation; vascular disease)

Gamut G-225

DILATED PANCREATIC DUCT

1. Aging
2. Calculus in distal common duct
3. Chronic pancreatitis
4. Pancreatic or ampullary mass (esp. carcinoma of pancreas or ampulla; focal acute pancreatitis)

NOTE: NATURE OF DILATATION

Suggesting Pancreatitis

1. Calculi in duct
2. Irregular dilatation of duct

Suggesting Neoplasm

1. Duct occupies >50% of anteroposterior gland diameter
2. Smooth and beaded appearance of duct

**PANCREATIC DUCT STRICTURE
(ERCP, MRCP)**

WITH NORMAL PANCREATIC PARENCHYMA

1. Osteophyte of spine
2. Vascular compression (eg, aneurysm or pseudoaneurysm of aorta, gastroduodenal, pancreatico-duodenal, or splenic arteries)

WITH ABNORMAL PARENCHYMA

1. Carcinoma of pancreas
2. Chronic pancreatitis
3. Duct hyperplasia

Reference

1. Gore RM: Pancreas: Differential Diagnosis. In Gore RM, Levine MS (eds): Textbook of Gastrointestinal Radiology. (ed 2) Philadelphia: WB Saunders, 2000, pp 1836–1843.

GAS IN PANCREATIC DUCT

COMMON

1. Abscess
2. Patulous Vaterian sphincter
3. Post-endoscopic retrograde cholangiopancreatography (ERCP)
4. Prior Vaterian papillotomy

UNCOMMON

1. Duodenal diverticulum communication
2. Enteropancreatic fistula (spontaneous; surgical)

Reference

1. Gore RM: Pancreas: Differential diagnosis. In: Gore RM, Levine MS: Textbook of Gastrointestinal Radiology. (ed 2) Philadelphia: WB Saunders, 2000, pp 1836–1843

**CYSTIC MESENTERIC
OR INTRAPERITONEAL LESION
(US, CT, MRI)**

COMMON

1. Abscess
2. Cystic lymphangioma
3. Hematoma
4. Mesenteric cyst

UNCOMMON

1. Ascites, complicated
2. Cystic mesothelioma
3. Cystic or necrotic stromal cell tumor_g (eg, leiomyoma; leiomyosarcoma)
4. Duplication cyst (enteric)
5. Hydatid disease
6. Lymphadenopathy, cystic or necrotic (eg, bacillary angiomatosis in AIDS)
7. Papillary serous carcinoma of peritoneum
8. Pseudocyst of pancreas invading mesentery
9. Pseudomyxoma peritonei
10. Teratoma

Gamut G-229**SOLID LESION OF THE MESENTERY OR MESENTERIC ROOT (US, CT, MRI)****COMMON**

1. Abscess_g
2. Hematoma (trauma; bleeding disorder)
3. Lymphadenopathy (eg, metastatic carcinoma; tuberculosis; Crohn's disease; Castleman disease; AIDS—bacillary angiomatosis)
4. Lymphoma_g
5. Metastasis (esp. from colon or ovary)
6. Omental "cakes" (eg, metastatic disease; carcinoid; lymphoma; tuberculosis)
7. Stromal cell tumor_g (esp. leiomyosarcoma; leiomyoma; neurofibroma)

UNCOMMON

1. Desmoid tumor (mesenteric fibromatosis); desmoplastic small round cell tumor
2. Hemangioma
3. Hydatid disease
4. Lipoma; lipomatosis; liposarcoma
5. Lymphangioma
6. Malignant fibrous histiocytoma
7. Mesothelioma
8. Phlegmon (pancreatitis); pseudocyst of pancreas
9. Retractile mesenteritis (chronic fibrosing mesenteritis; mesenteric lipodystrophy; panniculitis; Weber-Christian disease)
10. Splenosis
11. Teratoma

Gamut G-231**PERITONEAL DISEASE****COMMON**

1. Abscess_g, abdominal or pericolic (See G-89)
2. Adhesions (eg, inflammatory; postoperative); congenital peritoneal bands (Ladd's bands)
3. Crohn's disease
4. Endometriosis
5. Fluid, ascites (See G-233, 234)
6. Lymphoma_g
7. Metastasis, implantation, or invasion by malignant neoplasm
8. Obesity

(continued)

9. Pancreatitis (incl. saponification)
10. Peritonitis
11. Tuberculosis

Gamut G-232**DIFFUSE PERITONEAL THICKENING
(US, CT, MRI)****UNCOMMON**

1. Amyloidosis
2. Carcinoid
3. Cyst of mesentery
4. Desmoid tumor (mesenteric fibromatosis), isolated or with Gardner S.
5. Fungus disease^g (eg, actinomycosis)
6. Medication (eg, practolol peritonitis; Sansert)
7. Mesothelioma
8. Parasitic disease (esp. hydatid disease; amebiasis; pentastomiasis-*Armillifer* infection)
9. Pseudomyxoma peritonei
10. Radiation peritonitis
11. Retractile mesenteritis (chronic fibrosing mesenteritis; mesenteric lipodystrophy; panniculitis; Weber-Christian disease)
12. Sarcoma
13. Typhoid fever

COMMON

1. Carcinomatosis
2. Peritonitis
3. Postoperative state

UNCOMMON

1. Lymphoma^g
2. Mesothelioma
3. Pseudomyxoma peritonei
4. Sarcomatosis
5. Tuberculosis

Gamut G-233**PERITONEAL FLUID COLLECTION
(ASCITES) IN AN ADULT
(ESP. ON US, CT, MRI)****INFECTION OR INFLAMMATION OF THE
PERITONEAL CAVITY (PERITONITIS)**

1. Abscess
2. Pancreatitis
3. Pelvic inflammatory disease (PID)
4. Rupture of a hollow viscus (eg, appendicitis; diverticulitis; empyema of gallbladder; peptic ulcer; typhoid fever)
5. Tuberculosis or other primary infection causing peritonitis

LYMPHATIC OBSTRUCTION WITH CHYLOUS OR LYMPH ASCITES (See G-235)

Congenital

1. Milroy disease
2. Tuberous sclerosis

Elevated lymphatic pressure

1. Cirrhosis
2. Constrictive pericarditis
3. Heart failure

Infection

1. Filariasis

Neoplastic disease

1. Lymphoma_g; leukemia
2. Metastatic disease in lymphatics

Radiation therapy

Trauma

1. Rupture of abdominal lymphatics

NEOPLASM

1. Benign (eg, Meigs S.—benign ovarian tumor)
2. Malignant (eg, carcinoma of gastrointestinal tract or ovary with mesenteric or peritoneal metastases; mesothelioma)

VENOUS OBSTRUCTION

Cardiac disease with chronic elevation of venous pressure

1. Chronic right heart failure due to other causes
2. Constrictive pericarditis
3. Mitral stenosis

External pressure on the portal vein

1. Inflammatory lymph nodes (eg, tuberculosis)
2. Lymphoma_g
3. Malignant tumor, primary or metastatic
4. Sarcoidosis

Obstruction of the inferior vena cava above the hepatic vein

1. Mediastinal mass
2. Thrombosis of IVC

Portal vein obstruction secondary to diffuse hepatic disease

1. Hepar lobatum
2. Portal cirrhosis
3. Schistosomiasis

Portal vein thrombosis

1. Chronically ill patients
2. Invasion by neoplastic disease

Veno-occlusive disease

Thrombosis or web in inferior vena cava

OTHER CAUSES

1. Bile peritonitis
2. Ectopic pregnancy
3. Hemoperitoneum (eg, trauma; surgery)
4. Hypoalbuminemia (eg, nephrotic S.; protein-losing gastroenteropathy)
5. Peritoneal lavage; dialysis

[CONDITIONS THAT MAY MIMIC ASCITES]

1. [Mesenteric cyst]
2. [Ovarian cyst]
3. [Pancreatic pseudocyst]
4. [Pregnancy]

Gamut G-234**PERITONEAL FLUID (ASCITES)
IN AN INFANT OR CHILD****COMMON**

1. Appendiceal perforation
2. Cardiac disease (eg, anasarca; constrictive pericarditis)
3. Cirrhosis, portal or biliary (eg, biliary atresia; polycystic liver)
4. Hemorrhage
5. Hydrops fetalis; erythroblastosis fetalis
6. Hypoproteinemia (eg, malnutrition; kwashiorkor; intestinal lymphangiectasia)
7. Peritonitis (eg, meconium; sepsis; toxoplasmosis; rubella S.; cytomegalovirus infection; typhoid fever; amebiasis)
8. Portal vein or IVC obstruction, extrahepatic (eg, neoplasm; lymphadenopathy; thromboembolism)
9. Renal failure (eg, nephrotic S. with hypoproteinemia; glomerulonephritis; uremia)
10. Trauma; surgery
11. Urinary outlet obstruction with hydronephrosis (urine ascites)
12. Ventriculoperitoneal shunt

UNCOMMON

1. Antitrypsinase deficiency
2. Chylous or lymphatic ascites, neonatal (See G-235)
3. Galactosemia; tyrosinemia
4. Gaucher disease; lysosomal storage disease
5. Hemolytic anemia with ascites
6. Hydrometrocolpos with rupture and plastic peritonitis
7. Meckel diverticulum, perforated
8. Meigs S. (benign ovarian tumor)
9. Metastatic disease to peritoneum
10. Ovarian cyst, ruptured
11. Pancreatitis, acute
12. Preduodenal portal vein
13. Schistosomiasis

14. Thromboembolism of inferior vena cava, renal vein, or hepatic veins
15. Tuberculosis
16. Wilson disease

Gamut G-235**CHYLOUS OR LYMPHATIC ASCITES*****COMMON**

1. Filariasis
2. Lymphoma_g
3. Metastatic disease (esp. to lymph nodes)
4. Neoplasm, benign (esp. lymphangioma)
5. Neoplasm, malignant, compressing or invading lymphatic system (eg, carcinoma of pancreas, lung, esophagus; mediastinal tumor)
6. Postoperative
7. Trauma

UNCOMMON

1. Adhesive bands
2. Cirrhosis (hepatic lymphatics visible)
3. Congenital absence or hypoplasia of lymphatic system

4. Idiopathic
5. Lymphangioleiomyomatosis; tuberous sclerosis
6. Lymphangiomatosis, disseminated (benign metastasizing lymphangiomatosis)
7. Tuberculosis; histoplasmosis

* Obstruction of abdominal lymphatic vessels, cisterna chyli, or thoracic duct on lymphangiography.

SPONTANEOUS PNEUMOPERITONEUM WITHOUT PERITONITIS

COMMON

1. Iatrogenic (incl. postoperative; anesthesia; respiratory therapy; peritoneal dialysis; Rubin test; bronchoscopy; endoscopy; diagnostic pneumoperitoneum)
2. Idiopathic
3. Perforation of GI tract, forme fruste type (eg, peptic ulcer; neoplasm; Crohn's disease; bowel infarction or obstruction)
4. Vaginal “aspiration” (eg, douching; sudden squatting; oral sex; postpartum exercises)

UNCOMMON

1. ARDS
2. Distention of stomach (eg, aerophagia; gastroscopy; sodium bicarbonate ingestion; misplaced oxygen tube)
3. Idiopathic dilatation of colon (eg, pseudo-obstruction)
4. Jejunal diverticulosis

5. Pneumatosis cystoides intestinalis (See G-70)
6. Pneumomediastinum (eg, pulmonary emphysema; ruptured bulla)
7. Pneumothorax (eg, via congenital pleuroperitoneal fistula)
8. Sclerotherapy of esophageal varices

PNEUMOPERITONEUM WITH PERITONITIS

COMMON

1. Perforated hollow viscus (eg, peptic ulcer; intestinal obstruction; diverticulitis; appendicitis; necrotic tumor; penetrating or blunt abdominal trauma; emphysematous cholecystitis) (See G-238)

UNCOMMON

1. Meconium peritonitis
2. Megacolon with rupture (eg, Chagas' disease; Hirschsprung disease)
3. Perforation of colon following immunosuppressive therapy in renal transplant patient
4. Septic peritonitis with gas forming organism

(continued)

5. Ulcerating bowel disease (eg, typhoid fever; amebiasis; toxic megacolon; ulcerative colitis; Crohn's disease; tuberculosis; pseudomembranous colitis; necrotizing enterocolitis; ischemic colitis; lymphogranuloma venereum)

References

Gamut G-238**PERFORATED HOLLOW VISCUS IN AN INFANT****COMMON**

1. Iatrogenic (eg, intubation; rectal thermometer; enema; resuscitation; intrauterine transfusion)
2. Intestinal obstruction (eg, atresia; volvulus)
3. Meconium ileus (cystic fibrosis {mucoviscidosis})
4. Necrotizing enterocolitis
5. Respirator therapy
6. Trauma; battered child S.

UNCOMMON

1. Gastric rupture of newborn
2. Hirschsprung disease
3. Idiopathic
4. Ischemic enteritis (eg, umbilical artery thromboembolism; sepsis; malrotation with midgut volvulus)
5. Meconium plug S.
6. Perforated peptic or stress ulcer
7. [Pneumoperitoneum without peritonitis] (See G-236)
8. Small left colon S.

Gamut G-239**ABNORMAL GAS COLLECTION IN THE RIGHT UPPER QUADRANT****COMMON**

1. Abscess_g, abdominal (eg, subphrenic, hepatic, peritoneal, renal, or perirenal) (See G-243)
2. Colon interposition (Chilaiditi S.); colon distention
3. Gas in the biliary tract; biliary fistula (See G-128, G-139)
4. Pneumoperitoneum, free or loculated (eg, perforation of hollow viscus; postoperative) (See G-236–238)
5. Subhepatic gas or abscess (eg, perforated duodenal ulcer or appendix)

UNCOMMON

1. Abdominal wall gas or abscess (postoperative; traumatic; drainage tube)
2. Emphysematous cholecystitis
3. Gastric rupture of newborn
4. Iatrogenic pneumoretroperitoneum (incl. interventional embolization of a viscus; needle or catheter drainage; postnephrectomy; endoscopy)
5. Pneumatosis intestinalis (See G-70)
6. Pneumomediastinum with retroperitoneal extension
7. Portal vein gas (See G-192)
8. Retroperitoneal rupture of gut (esp. duodenum or rectum)
9. Stomach (heterotaxy)

Gamut G-241

LARGE ABDOMINAL GAS POCKET

Gamut G-240

ABNORMAL GAS COLLECTION IN THE LEFT UPPER QUADRANT

COMMON

1. Abscess_g, other abdominal (eg, subphrenic, splenic, pericolic, renal or perirenal)
2. Pneumoperitoneum, free or loculated (eg, perforation of hollow viscus; postoperative) (See G-236–238)

UNCOMMON

1. Abdominal wall gas or abscess (postoperative; traumatic; drainage tube)
2. Emphysematous gastritis
3. Iatrogenic pneumoretroperitoneum (incl. interventional embolization of a viscus; needle or catheter drainage; postnephrectomy; endoscopy)
4. Lesser sac gas or abscess (eg, postsplenectomy; perforation of gut; pancreatic abscess or infected pseudocyst)
5. Pancreatic gas abscess (peritoneal fat necrosis)
6. Pneumatosis intestinalis
7. Pneumomediastinum with retroperitoneal extension
8. Retroperitoneal rupture of gut (esp. duodenum or rectum)

References

1. Anschuetz SL: Extraluminal gas in the upper abdomen. Semin Roentgenol 1984;19:255
2. Baker SR, Cho KC: The Abdominal Plain Film with Correlative Imaging. Norwalk, CT: Appleton & Lange, 1983.

COMMON

1. Abscess_g, abdominal (eg, subphrenic, splenic, renal or perirenal, pericolic, pancreatic, lesser sac, abdominal wall)
2. Bladder distended with air (eg, iatrogenic; emphysematous cystitis)
3. Cecal distention (eg, nonobstructive “paralytic” ileus; pseudo-obstruction; colon obstruction)
4. Diabetic gastropathy; acute gastric dilatation (eg, cast S.)
5. Duodenal obstruction (See G-42, 43)
6. Gastric outlet obstruction (See G-30)
7. Hernia, obstructed (eg, hiatal; diaphragmatic; internal; external)
8. Pneumoperitoneum, free or loculated (subphrenic; lesser sac; greater sac)
9. Retroperitoneal or extraperitoneal gas (eg, duodenal or rectal perforation)
10. Sentinel loop (localized ileus) (See G-80)
11. Small bowel or colon obstruction, chronic (eg, Crohn’s disease; adhesions; congenital stenosis)

UNCOMMON

1. Abdominal wall gas (postoperative)
2. Amnionitis; endometritis (physometra); infected fetus
3. Blind loop S. (esp. postoperative) (See G-58)
4. Diverticulum of colon or duodenum (giant size)
5. Duplication cyst, communicating
6. Emphysematous cholecystitis
7. Emphysematous peritonitis
8. Fibroid, infected

(continued)

9. Gangrene of liver
10. Hydropneumometrocolpos; vaginitis emphysematosa
11. Meckel's diverticulum (giant size)
12. Ovarian cyst (eg, gas infection; intestinal fistula)

Gamut G-242**ABDOMINAL OR PELVIC ABSCESS****COMMON**

1. Appendicitis
2. Carcinoma or other malignancy with perforation
3. Crohn's disease
4. Diverticulitis
5. Pancreatitis
6. Pelvic inflammatory disease (eg, endometritis)
7. Peptic ulcer perforation
8. Postoperative
9. Posttraumatic (eg, gunshot or knife wound)
10. Tubo-ovarian (eg, sexually transmitted diseases; ectopic pregnancy)

UNCOMMON

1. Intestinal perforation, other (eg, intestinal obstruction; meconium ileus)
2. Ischemic colitis
3. Lymphogranuloma venereum
4. Parasitic disease (eg, amebiasis; schistosomiasis; ascariasis)
5. Perinephric abscess; pyelonephritis
6. Tuberculosis
7. Typhoid fever

Gamut G-243**RIGHT ANTERIOR PARARENAL SPACE ABSCESS (ESPECIALLY ON US, CT, OR MRI)**

1. Duodenal perforation secondary to
 - a. Ulcer
 - b. Foreign body
 - c. Inflamed diverticulum of duodenum
2. Crohn's disease of small bowel or ascending colon
3. Colitis involving ascending colon
 - a. Amebiasis
 - b. Diverticulitis
 - c. Tuberculosis
4. Ruptured retrocecal or retroperitoneal appendix
5. Pancreatic abscess or infected pseudocyst
6. Renal or perirenal abscess extending into pararenal space

Reference

Gamut G-244-S**ABSCESSES MIMICS ON ABDOMINAL US, CT, OR MRI****COMMON**

1. Cyst (eg, ovarian; renal; splenic; dermoid; mesenteric; hepatic; hydatid)
2. Hematoma
3. Loop of bowel
4. Necrotic neoplasm (eg, hepatoma; metastasis)
5. Pseudocyst of pancreas

UNCOMMON

1. Biloma
2. Iatrogenic (eg, retained Foley catheter)
3. Herniation of bowel through diaphragm
4. Lymphocele
5. Seroma
6. Urinoma

Gamut G-245**DECREASED ABDOMINAL GAS IN A NEWBORN****COMMON**

1. Congenital diaphragmatic hernia
2. Duodenal atresia or stenosis; annular pancreas
3. Endotracheal intubation
4. Esophageal obstruction (eg, atresia without T-E fistula; web) (See G-12, G-19)
5. Medication (esp. maternal)
6. Neonatal sepsis
7. Obstruction of pylorus (eg, hypertrophic pyloric stenosis at 2 to 8 weeks), duodenum, or proximal jejunum (esp. atresia or stenosis)
8. Suction, orogastric or nasogastric

UNCOMMON

1. Dehydration
2. Dysphagia; impaired swallowing physiology (eg, severe prematurity; depressed swallowing reflex; impending death)
3. Fluid-filled bowel
4. Large abdominal mass
5. Midgut volvulus
6. Normal
7. Peritoneal fluid (ascites)
8. Vomiting (eg, gastroenteritis; electrolyte imbalance)

References

Gamut G-246**DECREASED ABDOMINAL GAS IN AN ADULT****COMMON**

1. Acute pancreatitis
2. Ascites
3. Normal

UNCOMMON

1. Dysphagia
2. Fluid-filled bowel (eg, closed loop obstruction)
3. Hernia (esp. hiatal)
4. Large abdominal mass displacing bowel laterally
5. Mesenteric infarction, early
6. Obstruction of esophagus (eg, cardiospasm; neoplasm), stomach (eg, volvulus; pyloric obstruction from ulcer or neoplasm), or duodenum (eg, neoplasm)
7. Vomiting; inanition

Gamut G-247-1

ABDOMINAL CALCIFICATION(S) IN AN INFANT OR CHILD (See G-143, G-203, 204, G-247-2)

COMMON

1. Adrenal calcification (See H-123)
2. Appendiceal fecolith (calculus)
3. [Foreign material; pills; pica; medication; contrast medium; heavy metal]
4. Histoplasmosis or tuberculosis in liver, spleen, lymph node, peritoneum
5. Meconium in peritoneum (meconium peritonitis from intestinal perforation), intestinal lumen or wall
6. Neuroblastoma; other neurogenic neoplasm
7. Urinary tract calcification (See H-24)

UNCOMMON

1. Abscess_g, abdominal (esp. liver)
2. Arterial calcification (eg, metastatic calcinosis; primary or secondary hyperparathyroidism)
3. Calculus in Meckel's diverticulum or urachal cyst
4. Chronic granulomatous disease of childhood
5. Congenital syndromes (See G-247-2)
6. Cyst of spleen, kidney, pancreas, ovary, mesentery
7. Dermoid cyst; teratoma; fetus in fetu
8. Duplication, atresia, other obstruction of gut (mural or luminal calcification)
9. Enterolith; also enterolithiasis associated with anal atresia
10. Fetal infection (toxoplasmosis; rubella; cytomegalovirus; herpes simplex; varicella)
11. Gallstone (esp. thalassemia; sickle cell disease; other hemolytic anemia)
12. Hemangioma; lymphangioma (phlebolith; lympholith)
13. Hematoma, old (liver; spleen; retroperitoneal)
14. Hemochromatosis of liver
15. Hydrometrocolpos (ruptured) with plastic peritonitis
16. Ischemic infarct or necrosis of liver

17. Liver neoplasm (hemangioma; hamartoma; metastatic neuroblastoma; occasionally hepatoma; hepatoblastoma) (See G-154, 155)
18. Mucocele of appendix
19. Pancreatitis, chronic
20. Parasitic disease (eg, hydatid cysts or *Armillifer* infestation of peritoneum or mesentery; guinea worm infection or cysticercosis of abdominal wall or back)
21. Retroperitoneal neoplasm
22. Thromboembolism of inferior vena cava, portal vein, renal vein
23. Tuberculous psoas abscess

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

NONVISCERAL ABDOMINAL CALCIFICATION

COMMON

1. Aneurysm; arteriovenous malformation
- *2. Appendiceal fecalith (calculus), extruded into peritoneal sac
3. Atherosclerosis
- *4. Dermoid cyst; teratoma; fetus in fetu
- *5. [Foreign material (eg, pill; pica; medication; contrast medium; heavy metal)]

- *6. Gallstone extruded into peritoneal sac
- *7. Lymph nodes (eg, tuberculosis; histoplasmosis)
- *8. Meconium in peritoneum, intestinal wall or lumen
- *9. Phlebolith; lympholith (incl. hemangioma; lymphangioma)
- *10. [Rib cartilage]

UNCOMMON

- *1. [Barium in peritoneum]
 2. [Bone lesion with matrix or sclerosis]
 - *3. Epiploic appendage
 4. Fluorosis (ligamentous)
 5. Hydrometrocolpos
 6. Lipoma
 - *7. Lithopedion; extrauterine pregnancy
 - *8. Mesenteric cyst
 9. Mesothelioma of peritoneum
 10. Metastasis (esp. from colloid carcinoma; papillary cystadenocarcinoma of ovary)
 - *11. Mineral oil granuloma (instilled in peritoneum)
 12. Myositis (fibrodysplasia) ossificans progressiva
 13. Neoplasm of soft tissues (eg, osteoma; osteosarcoma; chondrosarcoma; undifferentiated abdominal malignancy)
 14. Neuroblastoma
 15. Pancreatitis with saponification; fat necrosis; Weber-Christian disease
 - *16. Parasitic disease (eg, hydatid cysts or *Armillifer* infestation of peritoneum or mesentery; guinea worm infection or cysticercosis of abdominal wall or back)
 17. Pheochromocytoma
 18. Pseudomyxoma peritonei (eg, from pseudomucinous cystadenoma of ovary; mucocele of appendix)
 19. Retroperitoneal hematoma
 20. Retroperitoneal neoplasm
 21. Scar or burn (abdominal wall)
 22. Scleroderma; dermatomyositis
 23. Thrombosis of portal vein, renal vein, or inferior vena cava
 24. Tuberculous peritonitis, psoas abscess
- * May be mobile.

Gamut G-249**ABDOMINAL CALCIFICATIONS THAT LAYER IN THE UPRIGHT POSITION****COMMON**

1. Bladder calculi
2. Gallstones

UNCOMMON

1. [Contrast medium; barium]
2. Dermoid cyst (eg, teeth)
3. Enteroliths in small bowel or Meckel's diverticulum
4. Milk of calcium (eg, in gallbladder or kidney, Pott's abscess, meconium, granulomatous lymph node, or chronic tubo-ovarian abscess)
5. Myxoglobulosis of appendix
6. Renal calculi (eg, in calyceal diverticulum or hydronephrosis)
7. Urachal cyst calculi

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-250**ABDOMINAL CALCIFICATION(S)
WITH A CONCRETION OR
ANNULAR MORPHOLOGY****COMMON**

1. Aneurysm; arteriovenous malformation; atherosclerosis
2. Appendiceal fecolith (calculus)
3. [Foreign body (eg, pill)]
4. Gallstone
5. Meconium
6. Pancreatic calculus
7. Phlebolith or lympholith (eg, normal pelvic veins; splenolith or hepatolith; hemangioma or lymphangioma; varicocele)
8. Prostatic calculus
9. Urinary tract calculus
10. Varix

UNCOMMON

1. Cyst (mesenteric; ovarian; renal; splenic)
2. Dermoid cyst
3. Diverticulum calculus (eg, colonic; duodenal; Meckel's)
4. Enterolith
5. Epiploic appendage
6. Lithopedion
7. Mineral oil granuloma
8. Mucocele or myxoglobulosis of appendix
9. Parasitic disease (esp. hydatid disease—*Echinococcus granulosus* or *E. multilocularis*; *Armillifer* infection; guinea worm infection or cysticercosis of abdominal wall or back)
10. Pseudomyxoma peritonei (eg, from pseudomucinous cystadenoma of ovary; mucocele of appendix)
11. Urachal calculus
12. Urethral calculus

[] This condition does not actually cause the gamuted imaging finding, but can produce imaging changes that simulate it.

Gamut G-260**ABNORMAL ABDOMINAL VESSELS ON ANGIOGRAPHY****COMMON**

1. Aneurysm_g
2. Anomalous origin or congenital absence of a vessel (eg, sequestration of lung)
3. Arterial occlusion, incl. collateral circulation (eg, via artery of Drummond; arc of Riolan; meandering mesenteric artery)
4. Arteritis, microaneurysms (eg, Behçet S.; Takayasu arteritis; necrotizing angiitis from drug abuse; my-

cotic aneurysms; polyarteritis nodosa; other connective tissue disease {collagen disease}_g)

5. Atherosclerosis
6. Fibromuscular dysplasia
7. Neoplasm, incl. neovascularity (eg, angiomyolipoma; pheochromocytoma; renal cell carcinoma) or vascular cuffing or displacement (esp. carcinoma)
8. Thromboembolism
9. Trauma (lacerated or transected vessel)
10. Varices (eg, portal venous hypertension or obstruction; inferior vena cava obstruction)

UNCOMMON

1. Anomalous pulmonary vein draining below the diaphragm (incl. venolobar S.)
2. Arteriovenous communication
3. Azygos continuation of inferior vena cava
4. Coarctation of abdominal aorta
5. Neurofibromatosis, arterial
6. Phlebitis (esp. pylephlebitis)
7. Portal vein occlusion (“cavernous transformation”)
8. Pregnancy (eg, hypertrophied uterine vessels; compression of iliac vein)
9. Pseudoxanthoma elasticum
10. Telangiectasia (eg, Osler-Weber-Rendu S.)

COMPLICATIONS OF AIDS IN THE GASTROINTESTINAL TRACT AND ABDOMEN

ESOPHAGITIS

1. Candidiasis (moniliasis)
2. Cytomegalovirus
3. Herpes
4. HIV

GASTRITIS

1. *Cryptosporidium* antritis
2. Cytomegalovirus infection (aphthoid ulcers; thick rugae, esp. at esophagogastric junction and antrum)

ENTERITIS WITH THICK IRREGULAR FOLDS, SPASM, AND OCCASIONAL DILATATION

1. Cryptosporidiosis
2. Cytomegalovirus infection
3. *Mycobacterium avium-intracellulare* infection
4. Parasitic disease (esp. giardiasis; strongyloidiasis)

COLITIS

1. Acute appendicitis
2. Cytomegalovirus infection of ileum and colon
3. Infectious colitis, esp. in rectum of homosexual men (eg, amebiasis; shigellosis; lymphogranuloma venereum {chlamydial proctitis}; gonorrhea)
4. Pseudomembranous colitis

NEOPLASM OF GI TRACT, OCCASIONALLY WITH INTUSSUSCEPTION OR OBSTRUCTION

1. Kaposi sarcoma
2. Lymphoma_g

LIVER AND BILE DUCT INVOLVEMENT

1. AIDS-related cholangitis (eg, cytomegalovirus; *Cryptosporidium*)

2. Liver abscess, infection (eg, *Mycobacterium avium-intracellulare*; *Pneumocystis carinii*; cytomegalovirus; histoplasmosis; cryptococcosis; bacillary angiomatosis)
3. Neoplasm (incl. lymphoma)
4. Peliosis hepatitis

SPLENIC INVOLVEMENT

1. Lymphoma_g
2. Splenic abscess, infection (eg, *Mycobacterium avium-intracellulare*; histoplasmosis; cryptococcosis; cytomegalovirus; *Pneumocystis carinii*)
3. Splenic infarcts (septic emboli)
4. Splenomegaly
