On page 447 in the Materials section, subheading 2.1. Transfection, item 4.

It currently reads:

HEPES buffer (HBS): 3 g HEPES, 100 mL ddH₂O, and 4.1 g NaCl. Dissolve and adjust pH to 7.03-7.05 using 2 M NaOH.

It should read:

2X Hepes buffer recipe → 1.64 g NaCl (0.28 M final), 1.19 g Gepes, 21 mg Na₂HPO₄ (1.5 mM final), dissolve with ddH₂O to a final volume of 100 ml. Adust pH to 7.03-7.05 using 2 M NaOH.
