

First International Workshop on Telecom Service Oriented Architectures (TSOA-07)

Paolo Falcarin¹ and Mariano Belaunde²

¹ Politecnico di Torino Italy
Paolo.Falcarin@polito.it

² Orange Labs, Lannion France
Mariano.Belaunde@orange-ftgroup.com

Telecommunication services and network features are often tightly coupled, separate, and vertically integrated. This vertical approach has an extremely weakening effect on service provider's ability to develop more complex services that could span over heterogeneous telecom networks and IT services.

The common vision for implementing services is now the realization of an horizontal service platform, based on shared services and network enablers, which can be easily composed in a service oriented architecture based on Web Service standards. The integration of communication services, content-based services, Internet-like services, and messaging services reveals several open issues.

For example, the organization of the internal structure of the service layer, the composition of IT services and telecommunication resources, the exposure of such resources as Web Services, and how these services interact with mobile terminal applications, the essential support for asynchronous interactions at service layer, are problems to be solved in the telecom domain.

Innovative model engineering techniques tend to be used to abstract commonality between different execution platforms and to facilitate the development of systems that can target different execution environments. The exploitation of these techniques in the context of service engineering and, more specifically, in the telecommunication domain is perceived as an opportunity for reducing development and maintenance costs.

The First Telecom Service Oriented Architecture Workshop (TSOA 2007) provided an international forum for researchers and practitioners from academia and industry to create a fruitful discussion on recent developments, standards, applications, techniques, modeling, design issues, case studies, experience reports, and tools to support the development of service-oriented systems, as well as to foresee future challenges in the area.

The Program Committee selected 8 papers out of 20 submissions from 13 countries (Austria, Belgium, Canada, China, France, Germany, Hungary, Italy, The Netherlands, Norway, Portugal, South Korea, Spain). All submissions were reviewed by four members of the Program Committee. Papers were selected based on originality, quality, soundness and relevance to the workshop.

The accepted papers were divided in 3 sessions: one on telecom service platforms, one on service modeling and composition and one on semantics usage in telecom services. The workshop program also included a keynote by Yves Lafon, whose talk on "W3C Web Services Standardization: Building Blocks and Beyond" described recent standardization efforts of W3C that are important for telecom service platforms.

We would like to thank the members of the Program Committee for providing timely and significant reviews, and for their substantial effort in making TSOA 2007 a successful workshop, with more than 20 participants.

The TSOA 2007 submission and review process was supported by the WELCOME conference system provided by MoleSystems: we are indebted to Stefano DiCarlo for his excellent support.

The workshop has been organized with the partial contribution of project SPICE (Service Platform for Innovative Communication Environment), which is funded by the European Commission, under contract IST-027617 (<http://www.ist-spice.org/>). The workshop was held in conjunction with the International Conference on Service Oriented Computing (ICSOC 2007). We would like to acknowledge Elisabetta DiNitto, Matei Ripenau and the other ICSOC organizers for their assistance in creating this co-located event.

Program Committee

Marco Aiello, University of Groningen, The Netherlands

João Paulo Andrade Almeida, Federal Univ. of Espírito Santo, Brazil

Pierpaolo Baglietto, Univ. Genova, Italy

Morgan Björkander, Telelogic, Malmö, Sweden

Alessio Bosca, Politecnico di Torino, Italy

Rolv Braek, NTNU Trondheim, Norway

Paulo Chainho, Portugal Telecom

Alan Colman, Swinburne University, Australia

Cristophe Cordier, Orange Labs

Olaf Drögehorn, Univ. Kassel, Germany

Dieter Fensel, Digital Enterprise Research Institute, University of Innsbruck, Austria

Laurent Walter Goix, Telecom Italia Lab

Jun Han, Swinburne University, Australia

Anne Marte Hjemas, Telenor, Norway

Wolfgang Kellerer, DoCoMo

Communications Labs, Munich, Germany

Ralf Kernchen, University of Surrey, UK

Patricia Lago, Vrije Universiteit Amsterdam, The Netherlands

Jean-Pierre Le Rouzic, Orange Labs

Carlo A. Licciardi, Telecom Italia Lab

Tiziana Margaria-Steffen, University of

Potsdam, Germany

Stefan Meissner, University of Surrey, UK

Mike P. Papazoglou, Tilburg University, The Netherlands

Gabor Paller, Nokia Siemens Networks, Budapest, Hungary

Luís Ferreira Pires, University of Twente, Enschede, The Netherlands

Claudia Raibulet, University of Milano-Bicocca, Italy

Christian Räck, Fraunhofer FOKUS, Berlin, Germany

Jordi Rovira, Telefónica, Spain

Robert Seidl, Nokia Siemens Networks, Munich, Germany

Mazen Shiaa, NTNU Trondheim, Norway

Jurgen Siemel, Alcatel-Lucent, Stuttgart, Germany

Antonietta Spedalieri, Telefónica, Spain

Maarten Steen, Telematica Institute, Enschede, The Netherlands

Changai Sun, University of Groningen, the Netherlands

Sasu Tarkoma, University of Helsinki, Finland

Francesco Tisato, University of Milano-Bicocca, Italy

Davide Tosi, University of Milano-Bicocca, Italy

Claudio Venezia, Telecom Italia Lab

Juan Carlos Yelmo, Universidad Politécnica de Madrid, Spain

Jian Yu, Politecnico di Torino, Italy

Michael Zaremba, National University of Ireland
