

# General advices

Guglielmo Maglio

## General Advices

Performing scientific experiments can lead to injuries or damages if done in a wrong way. It is suggested then to require the help and the supervision of an adult (teacher or parent) in performing the following experiments. Fondazione Idis is not responsible for damages that eventually can occur as a result of your failure to follow the safety rules and the instructions included into the description of activities.

## Some Safety Rules

- Never perform any of these experiments without the supervision of an adult (teacher or parent)!
- Always wear safety goggles when using chemicals or other substances that might get into your eyes!
- Wash your hands before and after each experiment!
- Never mix chemicals without an adult's permission!
- Be sure that bottles and containers are capped when not in use!
- Immediately notify the teacher or an adult if any chemical gets in contact with skin or clothing!
- Do not look directly into a test tube or smell it when mixing chemicals!
- Never taste a chemical substance you are using or producing in these experiments!
- Clean up the desk and all the equipment after the activity!
- Notify an adult immediately if you get injured when performing an experiment!
