

# Chapter 1

## General Provisions

**1.0.1** This code is established to standardize the life cycle monitoring during the construction and operation stages of the building structures in Qinghai Province, to specify the implementation of safety monitoring technology, and to ensure the safe and economic application of the advanced monitoring technology.

**1.0.2** This code applies to the monitoring of a variety of building sectors, including new construction, renovation, and retrofitting of industrial buildings, high-rise and large-span spatial structures, protective buildings, endangered houses, separated (subtractive) buildings, and industrial buildings in Qinghai Province. The monitoring of other types of building structures may also refer to this code.

**1.0.3** The implementation of the life cycle monitoring during construction and operation stages of the building structure should also comply with other relevant national standards.
