

Kromatech: Focus on Colour and Creativity

Tecnargilla 2014 (September 22–26, Rimini) confirms its centrality for the creative designers of the world ceramic industry.

In fact Kromatech – the section of the Rimini fair dedicated to paint producers, design studios and raw materials – will see the participation of the industry's top players and hosts the largest suppliers of raw materials for the ceramic industry. With the event just around the corner all exhibiting companies are actively engaged in developing and fine-tuning new technological solutions to present at the fair. In support of creativity in the ceramic tile segment, Tecnargilla 2014 will above all be the showcase for a brand new protagonist – digital glazing – the natural evolution of the inkjet decoration systems that have extensively revolutionized the tile decoration process in recent years. Alongside the paint producers who will present the new digital glazes, in an absolute world premiere the machine builders will show new application systems and integrated solutions for digital lines that will start the final run up to the definitive digitalization of glazing lines. This technological transition will allow the aesthetic level of materials to be raised and production lines and process management to be rationalized, thus leading to increased efficiency of profitability for ceramic businesses. The "digital tile" of the future will also be in the spotlight at Tecnargilla during the 6th ACIMAC (Association of Italian Manufacturers of Machinery and Equipment for Ceramics) Annual Meeting.

Indian Ceramics 2015 – Powered by Ceramitec

This year, for the first time ever, Indian Ceramics – powered by Ceramitec – was successfully held under the management of MMI India Pvt. Ltd., a subsidiary of Messe München International. India's leading supplier show for heavy clay and fine ceramics attracted more than 5,500 visitors from 26 countries and underlined its strong position on the Indian market.

The next Indian Ceramics opens its gates for the tenth time from **January 21–23, 2015 in Ahmedabad**. A number of the industry's leading manufacturers have already registered for the fair. In addition ACIMAC (Association of Italian Manufacturers of Machinery and Equipment for Ceramics) is organizing a large Italian Pavilion. Indian Ceramics 2015 will once again feature a first-rate program of supporting events that will be presented in cooperation with cfi and Ceramitec in Munich.

Reviewed and Renewed to Forge Ahead in 2015

MosBuild has been reflecting the market and facilitating its development since 1995. The event's success is partly due to the constant process of review and renewal to maximise its effectiveness and continuously improve the event experience. Event Director, **Ruzanna Sarkisova**, has announced the major change to the 2015 event. "We've got many exciting developments planned for MosBuild 2015 but after consulting with exhibitors and visitors, the biggest change that we are able to deliver is the return to the two-week format that we first introduced in 2012. This means that the emphasis of week one will be design and décor, with week two more focused on building and architecture.

Design and décor week will take place from **March 31 to April 3, 2015** at Expocentre fairgrounds in the centre of **Moscow** and will feature: bathrooms, ceramics & stone, flooring, wall décor, decorative textiles, paints, doors & locks, pools and ceramics manufacture. Building and architecture week is also held at Expocentre and will commence from **April 14 to 17**. It features: building materials, hardware & tools, lighting & electrics, interiors finishes, architectural stone, building machinery, country construction, windows, facades, gates and automation.
