Abstract Papillary thyroid carcinoma is rare in children. Its clinical manifestation may deviate from that observed in adult patients. We present a 14-year-old girl with papillary thyroid carcinoma. We then discuss various distinctive sonographic signs that may aid diagnosis, and we discuss differences in clinical features between children and adults.

Keywords Thyroid carcinoma · Paediatrics · Thyrotoxicosis

The abstract and keywords of this case report were mistakenly deleted during typesetting. The missing material is presented here.
