The Editor-in-Chief has retracted this article [1] due to concerns about the reliability of the figures in this article. Specifically:

- For Fig. 3A, the beta-actin band appears to be identical to figures from multiple other journals [2, 3, 4, 5, 6]
- For Fig. 3C, an identical beta-actin band appears in Fig. 1B of [2] despite different conditions
- For Fig. 3D, The first two and last two lanes of the betaactin band appear to be identical
- For Fig. 3D, the Cytochrome C blot appears to have be a duplication of the Apaf 1 band in Fig. 5B from [7]. Lanes III and IV seem to have been rotated and vertically stretched.
- For Fig. 4C, the beta-actin band appears remarkably similar to Figs. 1 and 2 in [3]
- For Fig. 5B, lanes I to V of the AKT blot appear to have been duplicated from lanes A to E in Fig. 2B of [3]. Lanes III and IV seem to have been rotated and vertically stretched.

Given these concerns, the Editor-in-Chief therefore no longer has confidence in the overall study presented in this article.

Authors Jasmine George and Yogeshwer Shukla do not agree with this retraction. Preeti Roy, Neetu Kalra, and Sahdeo Prasad have not responded to notices about this retraction.
