**M**itchell Feldman: Well, I guess this is it.  
Richard Kravitz: I suppose that depends on what your definition of “it” is.

MF: I mean that this issue of *JGIM* is the very last one we'll publish together.

RK: If I were the sentimental sort, I might pause to reflect on that. But I thought I would start with a few facts.

MF: Real or alternative?

RK: You decide. Between July 2009 and September 2017, *JGIM* received a total of 11,877 manuscript submissions and published 3047 articles. From a base of just under 1000 “peer-reviewable” articles (original research, reviews, and perspectives) submitted in 2010, *JGIM* received 1300 such submissions in 2016, while over the same period, acceptance rates for original research articles fell from 24% to 10%.

MF: So, competition for space in the journal increased. What about our Impact Factor?

RK: The Thomson Reuters Journal Impact Factor rose steadily from a base of 2.65 in 2009 to 3.70 in 2016. However, *JGIM*'s relative ranking in the General Medicine and Health Care Sciences and Services improved only marginally, meaning that *JGIM*'s competitors are improving too. However, under our tenure, *JGIM* gained recognition as the #1-ranked journal in the Primary Health Care category according to the Google Scholar h5-index. As you know, the h5-index of a publication is the largest number *h* such that at least *h* articles in that publication were cited at least *h* times each over a 5-year period.

MF: You and I have talked a lot about what Journal Impact Factor really means. *JGIM* has resisted the temptation to “game” the system by, for example, encouraging self-citation, preferentially publishing material from well-known authors, or engaging in some of the more extreme forms of self-promotion. Nevertheless, we know that authors look at the Impact Factor when deciding where to submit their best work, and we've tried to strike a balance between maintaining *JGIM*'s reputation for research rigor and seeking material that is likely to draw attention and get cited. I think we've

made progress, but there is still much for the next editorial team to do.

RK: Yes, they have an exciting road ahead. I'm sure you remember our early days with the journal. When we began our term, we were guided by the principle that *JGIM* is a journal for generalists committed to improving the world in which they practice, teach and conduct research. We aimed to publish data derived from settings where real patients live and real doctors practice (“practice-based evidence”), as well as reviews and tools that clinicians and educators use to do their jobs more effectively, efficiently, and humanely (thereby supporting “evidence-based practice”). We were lucky to inherit the strong editorial legacy of Bill Tierney and Martha Gerrity, and also a terrific editorial management team headed by Cindy Byrne and then Jenni Clarkson at Regenstrief Institute in Indiana. Some of our early goals were to streamline submission categories, reduce turnaround time, introduce new content in clinical medicine and in the humanities, increase *JGIM*'s web presence, and find new ways for the journal to add value for readers.

MF: And, remarkably, we got most of that done. Between 2009 and 2016, the average time from submission to initial editorial decision for externally reviewed manuscripts decreased from 72 to 59 days. We introduced new clinical content such as Clinical Images and Exercises in Clinical Reasoning that informed and challenged our readership. One experiment in the medical humanities (“Text and Context”) proved unsustainable, but others (“Materia Medica”) flourished. Our collaboration with the *Annals of Internal Medicine* has allowed us to attract some high-quality manuscripts that may not have come our way, but that have the potential for greater impact than the average *JGIM* paper (e.g. systematic reviews, larger clinical trials, epidemiological studies) and are also consonant with the needs and interests of our readers. Then, in one of our more brilliant moves, we recruited Neil Mehta to run JGIM Web. Neil not only created a working web portal; he also recruited, trained, and sustained an all-volunteer team of JGIM Web editors, many of them medical students, residents, and junior faculty. Finally, we made the commitment that most, if not all, original research content in *JGIM* would be accompanied by expert commentary. And by increasing the number of published editorials and introducing Capsule Commentaries, we did just that.

RK: You make it sound easy. As we've discussed, the future of medical journals is pretty murky. People have rightly asked what value journals and journal publishers add that justifies high subscription and open access prices. After all, peer

review is a volunteer activity, and a shrinking fraction of readers pay attention to the way articles are collated within issues. We often joked that when we put a monthly issue together, our goal was “Sgt. Pepper’s,” but most readers access information these days more like iTunes. When information is immediately searchable via the web, it’s less important how it’s organized. The reason we have doubled down on editorials and Capsule Commentaries is because this is how journals add value: by highlighting controversies, by providing clinical and policy context, and by stimulating debate. If it is to continue to survive and thrive, *JGIM* will need to keep adding value—perhaps through a more robust and interactive “Letters” section, perhaps by putting Mike Clarke’s recommendation (“reports of clinical trials should begin and end with an up-to-date systematic review”) into practice, perhaps by developing interactive and increasingly intelligent web tools that can deliver an engaging learning experience exactly at the time of need.

MF: And we should be sure to mention that we could not have accomplished anything without the dedication and good judgment of our volunteer group of *JGIM* deputy editors who have helped us build on the reputation for high quality that *JGIM* enjoys. We are fortunate that many of our most experienced deputy editors have remained on our team throughout our tenure. This is gratifying in light of the increasing financial and other pressures on faculty members in academic general internal medicine nationally. We are grateful for their service.

RK: And speaking of service, *JGIM* relies on a dedicated group of peer reviewers to examine findings, scrutinize methods, and help authors improve their work. In 2016–2017, *JGIM* reviewers volunteered their time and expertise to review about one-third of the approximately 1500 manuscripts *JGIM* receives each year. During this period, 724 reviewers provided a total of 882 reviews with a mean quality score of 4.3 on a scale of 1 to 6 (as judged by *JGIM* Deputy Editors). Of these, 151 provided at least two reviews, and 9 provided three or more. We are indebted to them for their service. Among this group of dedicated peer reviewers, there is a group of top performers who stand out. Reviewers included in this group performed at least two reviews between July 2016 and June 2017, returned all reviews within 30 days, and received a quality score of four or greater on all reviews. An asterisk identifies the 84 reviewers who meet these criteria. We congratulate them on their service to the academic community and thank them for their efforts on behalf of the journal.

MF: Well, I think that’s it. What are you going to do with all of your newfound spare time?

RK: Fortunately, I’m not too worried about that. As we both appreciate, the life of an academic generalist is infinitely rich and varied, and I expect I’ll continue teaching, doing research, and seeing patients in clinic and in the hospital, just as I’ve been doing for almost three decades. I’m also thinking about writing a murder-mystery novel that begins as our intrepid journal editor discovers a shocking peer-review scandal.

MF: Maybe stick to medicine.

RK: Good idea.

## JGIM Reviewers, 2016–2017

Admane, Sonal*	Bell, Sigall	Buranosky, Raquel
