CORRECTION

Correction to: Relative Age Effects Across and Within Female Sport Contexts: A Systematic Review and Meta-Analysis

Kristy L. Smith[1] · Patricia L. Weir[1] · Kevin Till[2] · Michael Romann[3] · Stephen Cobley[4]

Published online: 17 April 2018

Correction to: Sports Med
https://doi.org/10.1007/s40279-018-0890-8

An Online First version of this article was made available at https://link.springer.com/article/10.1007/s40279-018-0890-8 on 13 March 2018. Some errors were subsequently identified by the authors, particularly in regard to Table 4. Although the details pertained to in the table were correct in the original manuscript, it appears that errors were introduced during production of the article. The published article has now been updated with a corrected version of Table 4. This corrected version of the table is also shown below.

The original article can be found online at https://doi.org/10.1007/s40279-018-0890-8.

CI confidence interval

[a]Point estimate = pooled overall odds ratio ($Q1$ vs. $Q4$) estimate

[b]Z value = reflects the test for an overall effect

[c]p = indicating probability of significance ($p \leq 0.05$)

[d]Q value = dispersion of studies about the point estimate overall or within the subgroup

[e]I^2 = reflects heterogeneity within the subgroup
