

CERN – THE EUROPEAN LABORATORY FOR PARTICLE PHYSICS

Founded in 1954, CERN is the world's leading particle physics research centre. By studying the behaviour of nature's fundamental particles, CERN aims to find out what our Universe is made of and how it works. CERN's biggest accelerator, the large Electron Positron collider (LEP) recreates conditions at the birth of the Universe. A yet more powerful accelerator, the large Hadron Collider (LHC), is due for completion in 2005. One of the beneficial byproducts of CERN activity is the Worldwide Web, developed at CERN to give particle physicists easy access to shared data. One of Europe's first joint ventures, CERN now has a membership of 19 Member States: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Italy, The Netherlands, Norway, Poland, Portugal, Slovak Republic, Spain, Sweden, Switzerland, United Kingdom. Some 6,500 scientists, half of the world's particle physicists, use CERN's facilities.
