

Article Corrected

Keating GM. Ranolazine: a review of its use in chronic stable angina pectoris. *Drugs* 2008; 68 (17): 2483-2503

Correction Made

Page 2487, column 2, section 2.2.1, paragraph 1, lines 14-19: The following sentence, which previously read:

“There was no significant difference between ranolazine IR and atenolol in terms of the time to angina onset or the time to 1 mm ST-segment depression, although exercise duration was significantly ($p=0.006$) longer with ranolazine IR than with placebo.^[32]”

has now been corrected as follows:

“There was no significant difference between ranolazine IR and atenolol in terms of the time to angina onset or the time to 1 mm ST-segment depression, although exercise duration was significantly ($p=0.006$) longer with ranolazine IR than with atenolol.^[32]”
