

INDEX

A

absolute free energy of solvation	31
acid dissociation constant calculations	33
acidity of alcohols	34
active	
precursor complex	320
state	319
successor complex	320
state	319
adiabatic	
bond rearrangement	65
delocalized state	66
limit	
energy diffusion	65
low-diffusion	65
strong	65
regime, solvent-controlled	65
adiabaticity, electronic	64
ammonia and amines, change in basicity of	33
AM1 hamiltonian	169
analytical energy gradients	186
atomic	
radii	86
ion, effective energy	99
average	
electron density	95
properties of the solvent molecules near the solute	17

B

basis sets	
for expanding	
the electronic density in the DFT	186,187
the exchange-correlation energy density in the DFT	186,187
for the wavefunctions in the DFT	185
binding energy	194, 204, 213-218
bond rearrangement, adiabatic	65
Born	
charging process	90
formalism of ion solvation	85
model, generalized	29
-Oppenheimer approximation	1,63,180,264, 286
possible limitations	291
solvation energy, classical reaction field expression	98
solvation free energy	82
boundary conditions	
periodic	132

C

Carr-Parrinello method	181, 188-190
drawback of	189,301
cavitation	16
dispersion aspects of	16
solvent structural aspects of	16
cavity	
radius	
and model approximation, relationship between	50
innacuracy associated with the small size of	36,37
shape	190,191
size	191
van der Waals	263
charge	
localization solvent-induced	66
localized states , relaxation of	66
model, central	86,89
normalization condition	
for anions	84,89
for cations	85
for neutral atoms	84
penetration outside the cavity	26
polarization	87
transfer	237
virtual	26
charged system	191
charges	
Mulliken	163
from electrostatic potentials (CHELP)	164
from electrostatic potentials grid-oriented (CHELPG)	164,165
EPS	164
charging	
model	90
Born	90
Noyes-like	90,91
process	5
chemical	
potential	104
electronic	85,106
reaction, rate constant of	62,278,324
Claisen rearrangement	147,166,169
complex	
precursor	148,149
sucessor	148,149
condensed phase systems, accurate tretament of	2
continuum	
model	2, 17,179
failure	179,180
implementation of	19
polarizable	26
treatment of the first solvation shell effects	17
convergence	131
acceleration	135,136
COSMO method	

28	
Coulomb term	
145	
coupling parameter	143
cubic spline interpolation	146
D	
Debye	
model	63
time	63
Debye-Falkenhagen	253
Debye-Hückel theory	252
decay function of the momentum	63
density	
approximation	
local	185
non-local	185
critical	86
functional theory	82,183,299
basis sets	
localized functions	184
plane wave	183
super-cell approach	184
implementation	183
Kohn-Sham formulation	100
molecular dynamics	188-190
stationary principle	85
unified formalism for anions and cations	83
response function	
linear	110
static	104
DFT/Molecular Dynamics simulation	
196	
diabatic states	
261,287	
dielectric
