

A
Acute lung injury, 13
alveolar spaces lined by metaplastic epithelium, 19
necrosis, 16
reactive fibroblasts, 14
Adenocarcinoma, 27–28, 70
epithelial cells, 21
glands lined by cells with cytoplasm and nuclei, 42
without extension of fibrosis or inflammation, 22
Alveolar spaces, 109
Atypical adenomatous hyperplasia, 60

B
BAC, see Bronchioloalveolar carcinomas (BACs)
Benign epithelial cells, 105
Benign focal lesions, 93
Benign proliferations, 4–5
Benign proliferations versus cancer
assessment of histologic context, 6
differentiation of benign reactive proliferations from malignancy, 5–7
differentiation of type II pneumocyte hyperplasia from bronchioloalveolar pattern of adenocarcinoma, 7–8

histologic features overlap between benign reactive proliferations and cancer, 4–5
medical–legal issues with frozen section, 1–2
megakaryocytes, 8
histologic features favor reactive proliferations or cancers, 17–18
histopathologic features of benign reactive proliferations, 12–13
reactive atypia of type II pneumocytes versus bronchioloalveolar carcinoma, 18
overlapping features, 4
processes with reactive atypia, 2–4
conditions associated with reactive and metaplastic alveolar epithelium, 3
pulmonary cell types display reactive or metaplastic changes mimic neoplastic cells, 3
Biopsied lymph nodes, 121
Bronchial epithelium squamous metaplasia, 8
Bronchial margin dysplastic squamous epithelium or carcinoma-in-situ, 88
invasive non-small cell carcinoma, 89
squamous metaplasia or dysplasia, 87
Bronchiolar epithelium squamous metaplasia, 9
Bronchioloalveolar carcinomas (BACs), 5, 24, 30, 52, 53
alveolar septa consistent with mucinous, 58, 59
distinguished from small cell carcinoma, 46
features, 33, 55
intranuclear inclusions, 56
mucin-filled alveolar spaces, 57
similar features to cancer, 54

“Dirty” necrosis, 66, 67, 68
Dysplasia, 85–86, 87

E
Eosinophilic ghosts, 112
Eosinophilic pneumonia, 116
Epithelioid histiocytes, 101

F
Focal organizing pneumonias, 3, 93, 110
Frozen section conceptions to pathologist performing, 115–116

G
Goblet cell metaplasia, 10, 11
Granulation tissue filling alveolar spaces features of organizing pneumonia, 110
Granulomas, 93, 96, 98, 99, 100, 101, 122
multiple well-formed, without necrosis, 100
necrosis, 98
necrotizing, 99

H
Hamartoma, 106, 107
Histiocytes, granuloma, 96

I
Immunohistochemistry, 61
Interstitial pneumonia, 119
Intraparenchymal lymph node, 113

L
Large cell carcinoma, 27
Large cell neuroendocrine carcinoma (LCNEC) diagnosis of, 51
Lobectomy/pneumonectomy, 61, 85
Lobular carcinoma, 72
Lung carcinoma
diagnosis prior to surgery, 27
Lung nodule
adenocarcinoma, 69
Lung parenchyma, 108
Lymphatic involvement with
tumor, 85
Lymph nodes, 121
See also Metastatic lung
carcinoma
Lymphocyte-depleted Hodgkinlymphoma of lung, 47
Lymphoma
diagnosis of, 45, 83
Lymphoproliferative process,
diagnosis of, 83

M
Malignancy, 2, 5–7, 85, 88, 93, 116
Malignant cells, 25
lining fibrotic alveolar septa, 25
Mediastinal lymph nodes, 121
cells, 123, 124
metastatic adenocarcinoma, 122
Megakaryocyte, 26
pulmonary, 11
Melanoma, diagnosis of, 80
Metaplasia, 2
Metaplastic epithelium, 9, 19
Metastases
presence of multiple tumor
nodules, 62
Metastases to lung
histopathologic features
favoring metastatic
cancer, 62–64
differential diagnosis of
distinctive
histopathologic patterns, 63–64
histopathologic features of
non-pulmonary
metastases, 63
histopathologic features
favoring primary lung
carcinoma, 62
Metastatic adenocarcinoma, 67
of colon, 68
Metastatic cancer, 27
tumor nodules, 65
Metastatic lung carcinoma, 69, 121–122
Metastatic melanomas, 79
Metastatic papillary
adenocarcinoma of
thyroid and lung
parenchyma, 75
Metastatic papillary thyroid
adenocarcinoma, 76
Metastatic prostate carcinoma, 74
Metastatic renal cell carcinoma, 77
Mitoses, 14
Multinucleated giant cell,
granuloma, 96

N
Neoplasms, 5
Neoplastic cells, 2
Neutrophils, granuloma, 96
Non-neoplastic process, 19
Non-pulmonary metastases
histopathologic features, 62, 63
Non-small cell carcinomas, 27
cohesive epithelial cells with
abundant cytoplasm, 40
cut surface, 97
distinguishing from small cell carcinoma, 46
polygonal cells with abundant cytoplasm, 41
resection, 28
resemble small cell carcinoma, 43

P
Pathologists role and limitations, 1–2
Peribronchial tissues, invasion of, 85
Pleural margin
extension of non-small cell carcinoma cells through visceral pleura and parietal pleura, 90
non-small cell carcinoma cells extending near and into visceral pleural surface, 91
Pneumonectomies, 85
Pneumonia
organizing, 21
Primary cancers of lung
adenocarcinoma shows glands lined by cells with cytoplasm and nuclei, 42
bronchioloalveolar carcinomas, 30–32
histologic features of pulmonary neuroendocrine carcinomas, 31–32
cell types of neuroendocrine carcinomas, 29–30
histologic features, 30
diagnosis of, 62
non-small cell carcinomas, 33
small cell carcinoma versus non-small cell carcinoma, 27–29
histologic features, 28–29
types of carcinomas, 29
Primary renal cell carcinoma, 78
Prostate carcinoma, 73
Pulmonary granuloma, 94
Pulmonary hamartoma or mesenchymoma, 104
Pulmonary hyalinizing granuloma, 102, 103
Pulmonary infarct, 111

R
Reactive atypia, 2
bronchial epithelium, 8
bronchiolar epithelium, 9
endothelial cells, 4, 5
fibroblasts, 6, 7
reactive or metaplastic cells with associated histopathologic features, 3
Reactive endothelial cells, 4, 5, 17
resemble malignant cells with desmoplastic reaction, 17
Reactive fibroblasts, 12, 14
increased cellularity, 12
nucleoli, 14
Reactive hyperplastic type II pneumocytes, 8, 10
Reactive type II pneumocyte intranuclear inclusion, 15
Resected cavitary squamous cell carcinoma resembles cavitary granuloma, 95

S
Sarcoidosis, 100
Sarcoma metastatic to lung, 81
pleomorphic spindle cells with nucleoli, 82
Sclerosing mediastinitis, 103
Small cell carcinomas
cells with scant cytoplasm, 34
characteristics of, 36
classic features, 35
diagnostic difficulty, 28
peripheral palisading, 38
size of lymphocytes and size of, 39
spindle appearance of cells, 37
treatment, 33
See also Non-small cell carcinomas
Squamous cell carcinoma, 29
Surgical biopsy or excision of metastasis, 61
Surgical margins
bronchial, 85–86
others, 86
vascular, 86
Surgical resection, 30, 61

W
Wedge biopsy
diagnostic tissue, 115
for diffuse lung diseases, 115
of lung parenchyma, 117
lymphangitic spread of carcinoma, 120
mature fibrosis, 119
neutrophils and granulation tissue, 118
Wedge resections, 86
