Index

adjacency matrix, 148
Adleman, L., 247
associative operation, 7
Axiom of Parallels, 213

Baranyai, Zsolt, 229
bell curve, 58
bijection, 14, 150
binary representation, 12
    bits, 13
binomial coefficients, 20–21, 23, 24, 43–64, 70, 81
Binomial Theorem, 44
block design, 220–224, 229, 237
    blocks, 221
Brooks's Theorem, 203, 207

cardinality of a set, 5
Carmichael numbers, 120
Cayley's Theorem, 147, 150, 158
ceiling, 15
chromatic number, 202
circuit, 131
clique, 130
code, 232
    error-correcting, 236
    error-detecting, 234
    Fano, 236
    parity check, 233
    perfect 1-error-correcting, 236
    planar, 162
    Reed–Müller, 236
    Reed–Solomon, 236
    repetition, 233
    RSA, 247
coloring
    graph, 199–204, 206–210
    regions, 197–199, 204–206
    Steiner system, 227
commutative operation, 7
complement
    graph, 130
    set, 21
complexity theory, 203, 241, 246
composite number, 88
computer, 89, 110, 186, 206, 220, 242, 246
congruence, 105–107
    reflexivity, 105
    symmetry, 105

transitivity, 106
conjecture, 68
convex polygon, 179, 191
countries of a map, 189
cryptography, 110, 122, 242
cryptosystem, 242
cube, 194
Cube space, 215, 221, 224, 236
cut-edge, 142
cycle, 131, 141
Hamiltonian, 139, 161
length, 131
odd, 201

decrypt, 242
definition by induction, 66
degree of a node, 143, 150, 155, 195
difference of sets, 6
Digital Encryption Standard, 250
disjoint, 6
divisor, 87
dodecahedron, 194
graph, 139
double star, 155

edge, 126
parallel, 126
element of a set, 4
encoding, 11
encrypt, 242
Erdős, Pál, 184
Euclid's Fifth Postulate, 213
Euclidean Algorithm, 99–104, 112, 123, 249
Euler's Formula, 189–191, 194–196, 208
Euler, L., 135
event, 77
exclusive, 78
experiment, 77

face of a map, 194
factorization, 90, 99, 122
Fano, G., 217
father code, 149
Fermat test, 117
general, 120
Fermat's "Little" Theorem, 97–99, 117, 121, 248
Fermat, Pierre de, 97
Fibonacci numbers, 65–75, 83, 102, 123
Fibonacci, Leonardo, 65
Fisher's Inequality, 223
Five Color Theorem, 207
floor, 15
Four Color Theorem, 206
Frobenius, G., 169
Fundamental Theorem of Arithmetic, 90

Gauss curve, 57
Gauss, C.F., 105
general position, 182
Goldbach's conjecture, 96
golden ratio, 74
graph, 126, 189
k-colorable, 202
2-colorable, 200
bipartite, 165, 195, 200, 223
complement, 130
complete, 130, 192
connected, 131, 142
connected component, 133
dual, 206
edgeless, 130
planar, 192, 206–208
simple, 126
greatest common divisor, 99
Guthrie, F., 206

Hall, P., 169
Happy End Problem, 184
https, 250

icosahedron, 194
Inclusion–Exclusion Formula, 34, 114
independent events, 79

indirect proof, 37, 90, 92, 93, 142, 159, 192
induction, 25–31, 41, 44, 53, 61, 66, 68, 69, 71, 90, 98, 114, 129, 144, 183, 198, 203, 208
  simultaneous, 70
induction hypothesis, 27, 29, 53, 68, 98, 145, 198, 203, 208
integer part, 15
intersection of sets, 6
irrational number, 92
isomorphic, 146

Kempe, A.B., 206
key of cryptosystem, 242
  private, 247
  public, 248
Kirkman, T.P., 228
König, D., 166, 169
Königsberg bridges, 136
Kruskal's Algorithm, 159

labeled tree, 146, 148
Lam, C.W.H., 220
Latin square, 229–232
  orthogonal, 230
Law of Large Numbers, 77, 80
Law of Small Numbers, 83
Law of Very Large Numbers, 83
least common multiple, 99
line at infinity, 218
logarithm, 15, 31, 32, 37–40, 56, 59–62, 95, 102
loop, 126
Lucas numbers, 74

magic square, 230
Maple, 122, 246
Marriage Theorem, 169, 223
matching, 165–178
  greedy, 172
  perfect, 165
Mathematica, 122
Miller–Rabin test, 121
minimal criminal, 90
modular arithmetic, 109
modulus, 105
multigraph, 126, 207
multiple, 87

node, 126
  adjacent, 126
  degree, 127, 166, 171, 176, 203, 207, 210
  father, 142
  neighbors, 126
  son, 143
noisy channel, 232

one-time pad, 242
one-to-one correspondence, 14, 150

Pólya, G., 155
Pascal's Triangle, 49, 77
Pascal, Blaise, 49
password, 246
path, 130
  augmenting, 173
  endpoints, 131
  length, 131
permutation, 17
Petersen graph, 139, 195
Pigeonhole Principle, 35, 37, 114, 202, 230, 240
plain text, 242
planar code, 153
planar graph, *see* graph, planar
planar map, 189, 205, 206, 210
plane
  affine, 218
    coordinates, 219
    order, 218
  Euclidean, 211, 219
  Fano, 211, 221, 224, 236
  projective, 217
    order, 217
  Tictactoe, 213, 221, 224

point at infinity, 218
point of a graph, 126
polyhedron, 194
Prüfer code, 150, 152
    extended, 150
prime factorization, 245, 250
prime field, 109, 219, 237
prime number, 83, 88, 219, 245
Prime Number Theorem, 94
Principle of Induction, 27, 29, 199, 203
prism
    pentagonal, 194
    triangular, 194
probability space, 78
pseudoprime, 118
public key cryptography, 247
pyramid
    pentagonal, 194
Pythagoras, 92
Pythagorean triple, 100
Pythagoreans, 92

Ray-Chaudhuri, D.K., 228
recurrence, 66
relatively prime, 99, 249
remainder, 87, 248
Rivest, R., 247

sample space, 77
Schoolgirls' Walking Schedule, 228
Secure Socket Layer, 250
security, 249
set, 4
    cardinality, 5
    complement, 21
    difference, 6
    disjoint, 6
    element, 4
    empty, 5
    intersection, 6
    ordered, 17
    subset, 5, 20
      ordered, 19, 20
    symmetric difference, 6
    union, 6
    Venn diagram, 6
SET, game, 237
Shamir, A., 247
Sieve Formula, 34
signature, 249
star, 130
Steiner system, 224–229, 237
    coloring, 227
Steiner, J., 224
subgraph, 131
substitution code, 242
Swiercz, S., 220
symmetric difference of sets, 6
Szekeres, György, 184

Tarry, G., 220
tetrahedron, 194
Thiel, L., 220
Traveling Salesman Problem, 161
tree, 10, 11, 141–157, 191
    branch, 146
    edge, 10
    greedy, 159
    labeled, 158
    leaf, 143
    node, 10
    root, 142
    rooted, 142
    spanning, 142
Tree-growing Procedure, 144
Tree Shortcut Algorithm, 162
triangle inequality, 162
Twin Paradox, 37
twin primes, 94

uniform probability space, 78
union of sets, 6
unlabeled tree, 147, 153

Venn diagram, 6
vertex, 126

walk, 132, 136
    closed, 132
    Eulerian, 136

Undergraduate Texts in Mathematics

(continued from page ii)

Gamelin: Complex Analysis.
Gordon: Discrete Probability.
Hairer/Wanner: Analysis by Its History. *Readings in Mathematics.*
Halmos: Finite-Dimensional Vector Spaces. Second edition.
Halmos: Naive Set Theory.
Hämmerlin/Hoffmann: Numerical Mathematics. *Readings in Mathematics.*
Harris/Hirst/Mossinghoff: Combinatorics and Graph Theory.
Hartshorne: Geometry: Euclid and Beyond.
Hijab: Introduction to Calculus and Classical Analysis.
Hilton/Holton/Pedersen: Mathematical Reflections: In a Room with Many Mirrors.
Hilton/Holton/Pedersen: Mathematical Vistas: From a Room with Many Windows.
Iooss/Joseph: Elementary Stability and Bifurcation Theory. Second edition.
Isaac: The Pleasures of Probability. *Readings in Mathematics.*
James: Topological and Uniform Spaces.
Jänich: Linear Algebra.
Jänich: Topology.
Jänich: Vector Analysis.
Kemeny/Snell: Finite Markov Chains.
Kinsey: Topology of Surfaces.
Klambauer: Aspects of Calculus.
Lang: A First Course in Calculus. Fifth edition.
Lang: Calculus of Several Variables. Third edition.
Lang: Introduction to Linear Algebra. Second edition.
Lang: Linear Algebra. Third edition.
Lang: Short Calculus: The Original Edition of "A First Course in Calculus."
Lang: Undergraduate Algebra. Second edition.
Lang: Undergraduate Analysis.
Laubenbacher/Pengelley: Mathematical Expeditions.
Lax/Burstein/Lax: Calculus with Applications and Computing. Volume 1.
LeCuyer: College Mathematics with APL.
Lidl/Pilz: Applied Abstract Algebra. Second edition.
Logan: Applied Partial Differential Equations.
Lovász/Pelikán/Vesztergombi: Discrete Mathematics.
Macki-Strauss: Introduction to Optimal Control Theory.
Malitz: Introduction to Mathematical Logic.
Marsden/Weinstein: Calculus I, II, III. Second edition.
Martin: Counting: The Art of Enumerative Combinatorics.
Martin: The Foundations of Geometry and the Non-Euclidean Plane.
Martin: Geometric Constructions.
Martin: Transformation Geometry: An Introduction to Symmetry.
Millman/Parker: Geometry: A Metric Approach with Models. Second edition.
Moschovakis: Notes on Set Theory.
Owen: A First Course in the Mathematical Foundations of Thermodynamics.
Palka: An Introduction to Complex Function Theory.
Pedrick: A First Course in Analysis.
Peressini/Sullivan/Uhl: The Mathematics of Nonlinear Programming.
Prenowitz/Jantosciak: Join Geometries.
Priestley: Calculus: A Liberal Art. Second edition.
Protter/Morrey: A First Course in Real Analysis. Second edition.
Protter/Morrey: Intermediate Calculus. Second edition.
Pugh: Real Mathematical Analysis.

Undergraduate Texts in Mathematics

Roman: An Introduction to Coding and Information Theory.
Ross: Elementary Analysis: The Theory of Calculus.
Samuel: Projective Geometry. *Readings in Mathematics.*
Saxe: Beginning Functional Analysis
Scharlau/Opolka: From Fermat to Minkowski.
Schiff: The Laplace Transform: Theory and Applications.
Sethuraman: Rings, Fields, and Vector Spaces: An Approach to Geometric Constructability.
Sigler: Algebra.
Silverman/Tate: Rational Points on Elliptic Curves.
Simmonds: A Brief on Tensor Analysis. Second edition.
Singer: Geometry: Plane and Fancy.
Singer/Thorpe: Lecture Notes on Elementary Topology and Geometry.
Smith: Linear Algebra. Third edition.
Smith: Primer of Modern Analysis. Second edition.
Stanton/White: Constructive Combinatorics.
Stillwell: Elements of Algebra: Geometry, Numbers, Equations.
Stillwell: Elements of Number Theory.
Stillwell: Mathematics and Its History. Second edition.
Stillwell: Numbers and Geometry. *Readings in Mathematics.*
Strayer: Linear Programming and Its Applications.
Toth: Glimpses of Algebra and Geometry. Second Edition. *Readings in Mathematics.*
Troutman: Variational Calculus and Optimal Control. Second edition.
Valenza: Linear Algebra: An Introduction to Abstract Mathematics.
Whyburn/Duda: Dynamic Topology.
Wilson: Much Ado About Calculus.
