Shift and drift state, in deterioration function, 71–73
Shop performance, 227
Silicon steel laminations, 392
Simulated annealing (SA), 468
Simulation architecture, requirements for, 292
Simulation management techniques
distributed synchronization, 298
process management, 297
Singapore Kunming rail link (SKRL), 203, 204
Single-colony ant algorithm, 39
Single input single output (SISO) system, 364
Single-point crossover, in genetic algorithm, 78
Sliding mode control law, 253–254
Sliding mode controller, design of
linearized model, 348–349
simplicity and robustness of, 353
system identification and parameter estimation, 350
Sliding mode control (SMC), 245–246, 276, 361
applications of, 348
basic principle of, 347
design and simulation of
linear, 348–350
nonlinear, 350–353
nonlinear adaptive, 353–357
Sling mode control system, convergence property of, 347
Sonatest Masterscan 340 Ultrasonic Flaw Detector, 130, 132
SRM. See Supplier relationship management
State estimation
by Kalman filter, 315
system and measurement noise, 316, 317
Henon map noise, 322–324
logistic map noise, 320–322
Lorenz chaotic noise, 319–320
State space model, 368
Step response tuning, controller
output signal generated by, 337, 338
problem, 339
rules, 334
Stimulus-response (SR) compatibility,
spatial, 58–59
effect of
combined hand and foot controls, 60–61
foot controls, 59–60
stimulus and response arrays, 61–64
Stimulus–response stereotypes, 3
Stochastic local search policy, 42
Strategic oscillation, characteristics of, 471
Successive overrelaxation (SOR), 454
hardware implementation of, 459–462
Supervised learning, in neural network designs, 247
Supplier assessment
advantages and disadvantages, 122–123
criteria, 114–116
importance in manufacturing companies, 112
Supplier relationship management, 112
Supply-chain management
adherence to quantity stipulations, 120–123
adherence to time schedules assessment, 117–120
aggregative supplier assessment, 123–124
functions of, 112
importance of, 114–116
quality of supplied products assessment, 117
role of, 111
Suture production steps, 169
Symbol training, 27
experimental design and analysis for, 27, 34–36
factors affecting effectiveness of, 27
training factors, 34
training method, 28–34
methods for, 27
pretest–posttest experiments for, 36
System of nonlinear Fredholm integral equations (SNFIE)
application of the Newton method to, 440–441
method for solving, 439
Tabu search (TS), 468
algorithm based on strategic oscillation, 469–470
Taguchi loss function, 68, 70
Tangential shaving method, 95
Target
motion model of, 404–406
simulation parameters, 406–407
tracking approaches, 402
trajectories for, 407
Target tracker. See Track splitting filter
Tau method application, 441–443
Third-party logistics, 116
Tooth contact analysis (TCA) of shaved gear, 103–105
Tooth crowning, machine setting parameters, 101
Toughness of graph, 210
Tracking error, 277, 285
chaotic trajectory, 277
convergence of, 276, 288
Track splitting algorithm. See Track splitting filter
Track splitting filter, 401
critical angle sector, selective observations of, 402–404
performance parameter of, 407–408
prediction ellipse of, 402, 412
and target density, 408–411
Transport layer. See also Layered QoS functionality of, 304
QoS optimization of, 307–308
Transport layer protocol RUDP and TCP, comparison between, 308
RUDP and UDP, comparison between, 307
Transport resources and operations Gantt chart, 231
Tuning rules, 328, 336–337

U
Ultrasonic inspection techniques, 128, 130, 132
Unbalanced work cell, with one transporting unit T, 240
Uncapacitated hub location problem (UHLP) comparison with p-HMP, 186
as quadratic optimization problem, 187
Uncertainty and disturbance estimator (UDE) error of estimation, 367
first-order filter and second-order filter, 372
estimation accuracy of
first-order filter, 366
nth-order filter, 367
second-order filter, 366
load frequency response, 369
Uncontrolled chaotic dynamic system, chaotic orbits of, 277

V
Very high-scale integrated circuit HDL (VHDL), 456, 484
VILOMS. See Visual Lobe Measurement Software
Visual Basic 6, role, 79
Visual display terminal (VDT), 128
Visual Lobe Measurement Software, 135
Visual lobe measurement system (VILOMS) software, 477
Visual search process, 477

W
Work cell, 237
Work-cell throughput diagram, balanced, 238
Work gear and shaving cutter gear ratio of, 99
parameters of tooth crowning, 101
Work-gear movement and additional rotating angle, relationship, 100

Z
Zero-wait batch processes matrix method for
batch scheduling, 148
makespan estimation, 148–150
production sequence, 151–152
scheduling design of, importance of, 143
