51. Starr, 148. Note that there is an important difference between Hayek’s “decentralized knowledge” and Mao’s “scattered and unsystematic” ideas. The former consists of idiosyncratic information about matters such as local production possibilities or supply and demand conditions in some particular market that have little or no relevance outside of their immediate context. This kind of knowledge, which Hayek argued is generally of the greatest economic value, is not amenable to “systematization” or “concentration.”

64. Marx took over this view of circulation from Quesnay (see Marx, 1863, Chapter 2), whose (1758) *Economic Table* classified agriculture as “productive,” handicraft production and commerce as “sterile” (Newman *et al.*, 1954, 93). Interestingly, Gerlach (2005) argues that Quesnay, known in his day as the “Confucius of Europe,” may have derived this idea from Jesuit missionary accounts of the Chinese doctrine of “agricultural fundamentalism” (*nongben*). It seems that Marxism may not have been as foreign to China as is commonly supposed.
