The literature on the ‘great recession’ is still very much in its infancy. Gamble (2009) offers an excellent portrait of the events themselves and their implications, despite being written as those events were still unfolding. The first and final chapters are particularly valuable. Crouch (2008, 2009) and Watson (2010) provide helpful overviews of ‘privatised’ and ‘house price Keynesianism’ respectively, whilst Finlayson (2009) gives an excellent account of ‘asset based welfare’ and the assumptions on which it is based. Hay (2009, 2011) and Pemberton (2009) provide more detail on the economic and political implications of the bursting of the housing bubble. Thain (2009) and Coates (2009) provide diametrically opposed judgements of New Labour’s handling of the recession. Some of the broader arguments about the development of the welfare state in Britain in recent years are set in a comparative context in Hay and Wincott (2012).
