- asset price dynamics, 70–5
- asset prices, 10, 11, 13, 14–15
- asset returns, 3, 67
 - correlation matrix of, 13–14
- asset volatilities, 10
- asymmetric volatility model, 68
- asymmetry, 71
- backtesting
 - actual portfolios, 40
 - calculation of breaks, 39–40
 - calculation of value losses, 38–9
 - combined portfolios, 58–9
 - with constant FX and implied volatility, 41–6
 - with constant FX and stochastic implied volatility, 46–52
 - economic criteria and, 44–6, 50
 - economic significance of results, 60
 - with FHS, 30–65
 - individual firm tests, 43, 49
 - individual portfolio tests, 55
 - interest rate futures, 37
 - options, 37
 - overall frequency tests, 41–2, 47–9, 54–5, 59
 - process, 38–40
 - with stochastic implied volatility and foreign exchange, 50–2
 - on swaps, 52–8, 62
 - time clustering effect, 50, 56, 59
 - time clustering effect and, 43–4
- Bank for International Settlements (BIS), 31
- Black–Scholes model, 6, 67, 77, 84
- bonds, pricing, 2–3
- bootstrapping, 4
- breaks, 39–42, 44–9, 54–5, 57–8, 61, 62
- CGMYA model, 84–5
- conditional volatility, 10, 15, 17, 67
- correlation matrix, 13–14
- cross-dependencies, 3
- delta-gamma hedging, 10
- derivative prices, 69–70
- derivative securities portfolios
 - backtesting, with FHS, 30–65
 - marking to market, 39
 - simulating multiple pathways for, 13–15
 - VaR without correlations for, 9–29

- dynamic equilibrium model, 69–70
- economic criteria, 44–6, 50
- EGARCH model, 72
- European options, 68
- exchange rate (FX), 31
 - constant, 41–52
 - risk, 38
- expected returns, 5
- expiring positions, 40
- extreme value theory, 33
- filtered historical simulation (FHS), 2–3
 - backtesting derivative portfolios with, 30–65
 - GARCH option pricing model with, 66–108
 - for modeling future distributions of assets and swaps, 9–29
 - simulating multiple pathways, 13–15, 36–7
 - simulating single pathway, 34–6
- foreign exchange, 50–2
- GARCH option pricing model, 66–108
 - alternative GARCH pricing models, 77–9
 - asymmetric GJR, 71–2
 - benchmark model, 77–9
 - calibration of pricing models and, 79–82, 83–4
 - data, 75–7
 - empirical analyses, 75–100
 - GJR, with FHS method, 88–100
 - in-sample model comparison, 82–5
 - literature on, 68, 72
 - out-of-sample model comparison, 85–8, 89
 - pricing return dynamics and, 72–5
 - theoretical framework, 69–75
- Gaussian innovations, 78, 96, 98, 100
- Generalized Autoregressive Conditional Heteroskedasticity (GARCH), 2, 3, 5, 6, 10, 11, 12, 15, 16, 28n2, 34, 35, 46–7
- Girsanov theorem, 6
- GJR GARCH pricing model, 88–100
- historical measure, 5, 6
- historical returns, 11, 70–5
- historical simulation methods, 4, 10, 27, 33–4
- HN model, 78–9, 81, 84, 89
- IG model, 78, 81, 82, 84, 89
- implied volatility, 31, 34, 38, 41–6
 - stochastic, 46–52
- independently and identically distributed (IID), 10, 11, 28n1, 35, 37
- innovations, 12–13, 74, 78, 96, 98, 100
- interest rate futures, backtesting, 37
- interest rate swaps, 23–6, 31–2
 - backtesting on, 52–8, 62
- joint law of multivariate distribution, 4
- kurtosis, 68
- law of motion, 6
- leverage effect, 102n5
- linear VaR models, 32–3
- London Clearing House, 37
