References

CHAPTER I. KIDNEY

CHAPTER 2. URINARY BLADDER

CHAPTER 3. PENIS

CHAPTER 4. PROSTATE

**CHAPTER 5. TESTIS**

A
Adenocarcinoma, prostates. See Prostatic adenocarcinoma
Adenomatoid tumor, 152
Adrenal cortical heterotopia, 58, 59
Adrenal gland, 2
Angiomyolipoma (AML)
correct diagnosis, 19
differential diagnoses, renal tumor, 20
laparoscopic partial nephrectomy specimen, 18
myoid component, 23
myoid-rich, 24
surgical management, FS, 17
variant of, 20
voluminous tumor, 22
Asymptomatic nonpalpable testicular lesions, 141
Atypical adenomatous hyperplasia, 133–134
Azoospermia, 153–158

B
Basal cell carcinoma
penile skin
irritated, 112
superficial type, 111
vs. basaloid squamous cell carcinoma, 108
Basal cell hyperplasia, 134
Benign vascular tumor, 142
Bilateral pelvic lymph node dissection, 90. See also Pelvic lymph node
Birt-Hogg-Dube syndrome, 35
Bladder lesions, FS diagnosis.
See also Invasive urothelial carcinoma
adequate specimen, 82
differential diagnoses, 83
pointed nuclei and eosinophilic cytoplasm, 89
squamous and glandular differentiation, 83
transurethral biopsy/resection specimens, 82
urothelial carcinoma variants, 84
Bladder neck tissue, radical prostatectomy, 89. See also Prostatic adenocarcinoma
diagnostic features, 89
as high stage T4 tumor, 89
prostatic and glandular hyperplasia, 89
Bladder urothelial carcinoma. See also Urothelial carcinoma
specimen submitted for FS, 61
variants, diagnostic features, 84

C
Choriocarcinoma, 141
Chromophobe RCC
cell types, 12
oncocytoma and, 16–17
Chronic orchitis, 147
Chronic parenchymal injury, 52–53
Clear cell cribriform hyperplasia, 134
Clear cell renal cell carcinoma, 13, 34
Collecting duct RCC, 26, 28, 29
Comedo-type necrosis, 126
Condyloma penile, 109
warty carcinoma vs., 104, 108
Corpora cavernosa, 99
Cortical necrosis, 52, 57, 59
Cowper’s glands, 135
Cryopreservation, 153
Cystectomy, 62, 63. See also Partial cystectomy
Cystic nephroma, 34, 35
Cystic renal mass bilaterally diffuse renal cystic changes, 30
Bosniak classification, 30
major differential diagnoses, 30–31 (see also Renal cell carcinoma)
specimen handling, 30
Cystic renal neoplasm, 34
Cystoprostatectomy, 62

D
Differential diagnoses
Clear cell RCC, XGP, and malakoplakia, 11, 13, 14
common bladder urothelial carcinoma variants, 84
cystic renal tumors, 32–33
germ cell tumor subtypes, 146
renal pelvic urothelial carcinoma, 29
Donors’ kidneys
adrenal cortical heterotopia, 58
arteriolar profile, intimal fibrous thickening, 56
artery, inconspicuous intima and intimal fibrosis, 56
cortical necrosis characterization, 57, 59
focal chronic tubulointerstitial injury, 54
FS consultation biopsies with, 51
indications for, 52
with glomerulonephritis, 59
grading of chronic renal injury, 53
grossly visible subcapsular nodules, 59
intravascular coagulation, 53, 57
sclerotic glomeruli, identification, 53
specimen handling, 52
subcapsular characterization, 55
vascular changes, 53
wedge biopsy vs. needle biopsy, 52

E
Ejaculatory duct, 135
Embryonal carcinoma, 141
Endodermal sinus tumor, 139
Epidermoid cyst, 150
Epididymis, 138
Extrarenal masses, kidneys, 43–48

F
Fibroepithelial polyp, 89
Flow cytometry, 139, 149
Frozen sections (FS) diagnoses adenocarcinoma prostate, organ donors, 128
prostatic transurethral resection specimens, 132
angio(myolipoma (AML), 17
bladder lesions, 82
neck tissue in radical prostatectomy, 89
renal lymphoma, 45
testicular biopsy, 156–159
lesions, 137
urothelial carcinoma, 26
FS/touch preparation, testicular biopsy maturational arrest, 156–157
normal spermatogenesis, 154
sertoli cell only, 157–159
specimen handling and interpretation, 155

G
Germ cell tumor
“burnt-out,” 143
differential diagnoses, 146
nonseminomatous, 151
radical orchectomy, 141
testicular tissue, 139
Gerota fascia, 24, 26
Glandular hyperplasia, 89
Glomerular diseases, 49
Glomerulonephritis, 52, 59

H
Hemorrhagic necrosis, 140
Hereditary papillary renal carcinoma syndrome, 35
Hilar tumor, 1, 25
Hyperchromasia, 64, 78, 104

I
Idiopathic granulomatous orchitis, 148
Immunohistochemistry, adjunct to FS, 153
Infertility, 141, 153
Inflammatory myofibroblastic tumor, 20
Intratubular germ cell neoplasia, 141
Intratubular germ cell tumor (ITGNC), 139, 141, 143, 144
Intravascular coagulation, 52, 53, 57
Invasive u rachal mucinous adenocarcinoma, 81
Invasive urothelial carcinoma cauterized tumor cells, 87
high-grade nonmuscle, 62
invading subepithelial tissue, 85
at margin, 67
at perivesical soft tissue margin, 77, 78
ureteral/urethral margins, 66
and variants, 82
WHO classification, 83 (see also Bladder lesions, FS diagnosis)
In vitro fertilization, 153

K
Kidney lesions, 1
Koilocytotic changes, 108, 109

L
Leiomyoma, 20
Lymph nodes, 47–48. See also Pelvic lymph node evaluation, during cystectomy, 90
histiocytic reaction, characterization, 91
iliac and pre-sacral lymph nodes, FS examination, 90
metastatic status evaluation, 90
specimen handling, 90–91
evaluation, during penectomy (see also Squamous cell carcinoma)
clinical background, 113
confluent sinus histiocytosis/foamy macrophages, 113
false negative diagnosis, 113
sentinel/nonsentinel dissection, 113
gross consultation/FS, retroperitoneal nodal dissection, 151–153
histiocytes accumulation, 130
metastatic prostate carcinoma, 127
metastatic prostatic acinar adenocarcinoma, 128, 129
Lymphoma, 48, 147, 149

M
Malakoplakia, 14, 17, 18
Mature cystic teratoma, 150
Metastatic adenocarcinoma, 28
Michaelis-Guttmann bodies, 14, 18
Multilocular cystic clear cell RCC, 34
Multilocular cystic RCC, 37
Multiple renal masses, 43
different histological types, 44
same histological type, 44
types, 44
Muscularis propria, 81, 85
N
Native/transplanted kidneys, needle biopsy, 49
adequacy threshold, 51
Banff scheme, renal transplant biopsy, 51
glomerular involvement, 49–51
light microscopy examination, 50
open glomeruli identification, 49
renal transplant biopsy, 51
Nephrectomy, 25
Nephrogenic adenoma, 134
Nephroureterectomy, 25
Nodal metastasis, 6, 47, 85, 90, 91, 113, 125, 126, 137, 151
Nodules/masses, extravesica/bladder peritoneal
frequent diagnostic entities, 82
incidental lesions, presence, 81
Nongerm cell tumors, 149
Nonpalpable testicular tumors, 141
Normal penile (glans) squamous mucosa, 97
Normal penile urethra, 99
Normal spermatogenesis, 154, 155

O
Obstructive azoospermia, 155
Occult prostate carcinoma, 128, 130
Oncocytoma
with cytological atypia, 21
encapsulated mass, 19
eosinophilic cytoplasm, 22
vs. chromophobe renal cell carcinoma, 16–17, 20
Orchietomy, 115
Organized hematoma, testicular mass, 140
Organ transplantation, 128

Partial cystectomy
interpretation
signet ring cell type, 81
urachal adenocarcinoma of mucinous, 81
surgical margin evaluation
en face margin, 80
focal invasive carcinoma, 80
indications, 79
invasive urachal mucinous adenocarcinoma, 81
perpendicular/en face sections, 79

Partial nephrectomy
laparoscopic, 18, 36
specimens
atrophic renal tubules, at periphery, 41
biopsy of tumor bed, 42–43
cystic clear cell RCC, 42
fibrosis/distorted tubules, 43
FS evaluation, 35–36
gross confine of tumor, 40
indications, 35
parenchymal surgical margin, 41
satellite tumor nodules, encounter, 41
specific diagnosis, for tumor type, 39
specimen handling, 39–40
surgery, 36, 38
surgical margin clearance, 40
tumor types selected for, 41
vs. laparoscopic partial nephrectomy, 38

Partial orchiectomy, 139, 141–143, 146, 150, 151
Partial/total penectomy specimens
interpretation
corpus spongiosum examination, 97
differentiation diagnoses, 101, 104, 108
sites and frequency, carcinoma, 96
tumor grading and depth of invasion, 101
specimen handling, 96–97
surgical margin evaluation, 95
margins included, 95
negative penile skin margin, 101
normal penile (glans)
squamous mucosa, 97
normal penile urethra, 99
penile urethra margin, 98
perpendicular section of
margin, 103
positive penile resection
margin, 100
proximal normal urethra
margin, 98
proximal resection margin,
corpora cavernosa, 99
squamous hyperplasia and
reactive atypia, 103
Pelvic lymph node
cystectomy and dissection, 62
granular cytoplasm replacement, 91
macrophages/histiocytes, 130
metastatic urothelial carcinoma, 91–93
Mullerian features, 128
radical prostatectomy,
evaluation, 125
choice of FS vs. gross
examination, 126
cribriform gland formation/
comedo-type necrosis, 126
false positive FS result, 126
metastatic high-grade Gleason
pattern, 126
Mullerian features, 128
nodal metastasis incidence,
125–126
replacement, by foamy
histiocytes, 131
Penile squamous cell carcinoma
clinicopathological features, 102
occult micrometastasis, 113
primary site and frequency, 96
Peritoneal fat necrosis, 67
Primary renal lymphoma, 45
interstitial inflammation, 47
Primary renal pelvic
adenocarcinoma, 28
Prostate atrophy, 134
Prostate cancer
biopsy
apical margin, 121
apical tissue with positive
margin, 119
bladder neck tissue with
positive margin, 119
lateral surgical margin with
carcinoma, 121
posterolateral margin, 122
cauterized ganglion cells and
nerve, 123
diagnosis
high-grade, 135
well differentiated, 133–135
frozen section (FS)
 apex, final surgical margin, 116
guidance of surgical
intervention, 115
margin status evaluation,
116–117
posterolateral margin biopsy, 118
Gleason score and PSA levels, 116
inflammatory cells and vessels,
neutrophils, 124
interpretation pitfalls,
 intraoperative FS, 117
neutrophils margination, 125
patient of heart recipient, 128
positive margin
clinical significance, 116
highest risk area, 116
radical prostatectomy
interpretation and criteria,
margin evaluation, 117
intraoperative FS evaluation, 116
Prostate carcinoma. See Prostate
cancer
Prostatectomy specimens, nodular
hyperplasia
amount of tissue selection for
FS, 133
interpretation (see Prostate
cancer)
prostatectomy specimen,
sampling, 133
transurethrally resected prostate
specimens, 132
Prostatic adenocarcinoma
bladder neck involvement, 89
clear cell cribriform
hyperplasia, 134
FS diagnosis, organ donors
histiocytes, with foamy
cytoplasm, 131
Prostatic nodular hyperplasia, 134
Prostatic specific antigen (PSA),
115, 130
Pseudoangiosarcomatous
pattern, 108

R
Radical cystectomy/
cystoprostatectomy
interpretation
broad category diagnoses, 63
diagnostic pitfalls, 65
En face section, distal urethral
surgical margin, 66
high-grade dysplasia/CIS,
diagnostic criteria, 64
invasive urothelial carcinoma,
66–67, 77, 78
low-grade dysplasia diagnosis, 64
nuclear enlargement, 65–66
perivesical soft tissue margin
interpretation, 67
positive margin, high-grade
dysplasia/carcinoma, 64–65
positive urethral margin, 66,
74, 75
reactive blood vessels, 78, 79
superficial subepithelial
invasion, 76, 77
vascularity and inflammation
in lamina propria, 65
specimen handling, 63
surgical margin evaluation, 62
perivesical soft tissue margin, 63
ureteral margin, 63
urethral margin, 63
Radical nephrectomy
for RCC, 1, 3, 6 (see also
Urothelial carcinoma)
specimen handling, 2
Radical orchietectomy specimen,
gross consultation
inguinal approach, 137
mechanical pulling, 138
surgical margin status, 138–139
RCC. See Renal cell carcinoma
RCC with extensive cystic necrosis,
37, 38
Reactive atypia, inflammation, 134
Reactive hyperplasia vs. squamous
cell carcinoma, 101
Renal allograft dysfunction, 49
Renal cell carcinoma, 1
additional surgery, 3
diagnosis and histological
subtypes, 7
chromophobe RCC, 12
clear cell, high nuclear grade, 8
clear cell, low grade, 9–10
clear cell, low nuclear grade, 8
mucinous spindle and tubular
cell carcinoma, 11
papillary RCC, type 1, 10
differential diagnoses, clear cell
RCC, 11, 13, 14
FS evaluation, 3
gross appearance, 6
histological types, differential
diagnosis, 4–5
Renal lymphoma, 7
Renal malakoplakia, 13
Renal mass, FS definitive diagnosis
clinical background, 3, 7
interpretation
angiomylipoma, 17–20, 22–25
chromophobe RCC, 16–17
diagnosis of RCC and, 7, 11
differential diagnoses, 11,
13–14
oncocytoma, 16–17
specimen handling, 7
Renal pelvic urothelial carcinoma
differential diagnoses, 29
preoperative diagnosis, 25
Renal tumors, 43
partial nephrectomy, 35
radical nephrectomy treatment, 1
in VHL syndrome, 44–45
Retroperitoneal liposarcoma, 24
Romanowsky stain (diffQuik), 155
Rosai-Dorfman disease, 144
Sarcomatoid carcinoma, 108
Sclerosing adenosis, 133
Seborrhoeic keratosis (SK)
irritated, of penile skin, 112
vs. well-differentiated squamous cell carcinoma, 108
Seminal vesicle, 135
Seminoma, 144
Sertoli cells, 143, 154, 156–159
Sertoli cell tumor, 149
Solitary fibrous tumor, 23
Spindle cell tumors, 20
Spring-loaded biopsy device, 49
Squamous cell carcinoma
basaloid, 100, 108, 113
FS diagnosis of nodal metastasis, 113
invasive, 101, 106–110
metastatic poorly differentiated, 114
moderately differentiated, 107
papillary, 96
penile, 113
positive surgical margins and recurrence, 95
reactive hyperplasia vs., 101
variants of urothelial carcinoma, 83
 verrucous, 105–106
well-differentiated, 96, 104

T
Testicular biopsies, 155
Testicular infarct, 142
Testicular lesions
asymptomatic nonpalpable, 141
frozen section (FS), studies, 137
dense collagenous fibrous scar-like tissue, 143
testicular infarct, 142
FS consultation, definitive diagnosis, 141
interpretation caveats
germ cell tumor, differential diagnoses, 146
granulomatous/lymphocytic components, 146
homogeneous clear cell pattern, 144, 146
metastatic tumors, 150
nongerm cell tumors, 149
teratomatous components, 146
intraoperative consultation indications, 138
lesion diagnosis, 143–144
neoplastic distinction, 144
Testicular mediastinum, 138
Testicular tumors, 137
Testis-sparing partial orchiectomy, 139
Testis-sparing surgery, 142
Total nephrectomy, 16
Tuberous sclerosis, 35
Tumors, prepubertal patients, 141
Tunica albuginea, 99, 138
Tunica vaginalis, 138

U
Unilocular cystic papillary RCC, 39
Ureteral urothelium. See also
Radical cystectomy/cystoprostatectomy
low-grade dysplasia, 68
reactive atypia, 73, 74
Urothelial carcinoma, 62
bivalving nephrectomy specimen, 26
cells forming papillary structures, 27
collecting duct RCC, 26
eosinophilic appearance, 28
frozen section for clinically suspected, 25
FS evaluation, 25
interpretations, 28–29
nephroureterectomy specimen, 26
specimen handling, 26
high-grade, 3
low-grade, 3
pelvic lymph node with metastatic, 91
penile urethra, 96
spindle and cuboidal cells, 27
Urothelial neoplasia, 62
V
Vasectomy reversal, vasal fluid examination, 155–159
Vasoepididymostomy, 155, 159
Vasovasostomy, 155, 159
Verrucous squamous cell carcinoma, 105–106

von Hanssemann histiocytes, 14
von Hippel-Lindau (VHL) disease, 35

X
Xanthogranulomatous pyelonephritis (XGP), 13–16
