

Subject Index

A

- Acceleration suggesters, 144–145
- Access management technique, 162
- Adaptive controller software, 90
- Adaptive signal control
 - CARREN, 120
 - MOTION, 92
- Advanced & Visual Evaluator for road
 - Networks in Urban arEas, *see*
 - AVENUE traffic stimulator
- Advanced incident detection algorithm, 387
- Advanced motorway optimal control, 419
- Advanced traffic information system, 192, 261, 363
- Advance traffic management system, 192, 233
- Aggression control, 135
- Aimsun traffic stimulator, 173–229
 - calibration and validation, 203–217
 - calibration, 211–217
 - validation, 207–211
 - verification and validation, 205–207
 - car following and lane changing models, 182–192
 - mesoscopic logic, 183
 - mesoscopic movement, 190–192
 - microscopic logic, 183
 - microscopic movement, 183–189
 - case studies: applications and details, 220–229
 - challenges and further needs, 228–229
 - highway performance assessment, 222–224
 - online application in Madrid, 227–228
 - Paris tramway, 220–222
 - Zaragoza tramway, 224–226
 - development principles, 174–176
 - dynamic traffic assignment, 192–203
 - data flows and methodology, 200–203
 - discrete choice theory, 194–197
 - dynamic user equilibrium, 198–200
 - iterative heuristics, 197–198
 - external applications, 217–220
 - micro/meso model SDK, 220
 - micro API, 219
 - SDK aimsun platform, 218–219
 - formats imported into, 178
 - microscopic simulation process in, 182–183
 - model-building principles, 176–181
 - model building, 176–181
 - output analysis, 181
 - verification, calibration and validation, 180–181
 - physical parameters, 177
- Algorithmic framework, 12
- ALINEA local ramp metering, 403, 410
- ALMO, 219
- Amber shading, 78
- Annoyance, 122
- ANPR data, 150
- Application programming interface (API), 179
- ArcView shape, 273–274
- ARGOS project, 287
- ARTEMIS, 92
- Arterial corridors, 265
- ASJ Model, 122
- AutoCAD, 178, 205
- Autodesk, 74
- Automated motorway management, 161
- Automated traffic management, 161
- Automated vehicle location, 243, 261
- Automatically remove vehicle, 207
- Automatic passenger counters, 243
- Automatic traffic surveillance and control, 386
- Automatic vehicle identifier, 73, 119, 390, 392

- Autoregressive matrices, 380
 - AVENUE traffic stimulator, 95–128
 - calibration and validation, 103–112
 - Japanese verification manual, 104–105
 - route choice model, 107–109
 - shockwave propagation, 106–107
 - standard benchmark data, 109–112
 - standard verification manual, 105–106
 - vehicle generation, 106
 - verification and validation, 103–104
 - case studies, 122–128
 - capacity reduction by a on-street-parked vehicle, 124–125
 - LRT and public transportation priority system, 125–126
 - pedestrian crossing, 126–128
 - external applications, 112–122
 - adaptive signal control system, 119–122
 - automatic parameter tuning, 114
 - capacity value and step size of updating, 117
 - link traffic volume, 116–117
 - link travel time, 115–116
 - OD Flow and link flow, 112–113
 - time-dependent OD estimation, 112
 - Tokyo metropolitan expressway, 114
 - unique OD matrix, 113
 - vehicle probe information system, 117–119
 - generic cost function, 102
 - modeling principles, 96–98
 - all-in-one software package, 97–98
 - framework of models, 97
 - hybrid approach, 96
 - route choice model, 96–97
 - traffic assignment, 101–103
 - dual-graph expression, 102–103
 - dynamic route choice, 101–102
 - traffic flow modeling, 98–101
 - hybrid block density, 98–100
 - lane choice and traffic regulations, 100–101
- B**
- Backward wave, 107
- Band analysis, 211
- Bernoulli distribution, 52
- Bezier curve, 68, 138
- Bifurcation node, 401–402, 404, 410–413
- Black box, 55, 96, 104
- Block density method, 98
- Bottleneck, 96, 104, 106–107, 116, 128, 343, 352, 429
- Boulevards des Maréchaux urban ring road, 220
- Boundary data, 402, 404
- Broadcast devices, 160
- Brunnsviken network, Stockholm, 254, 258
- Bus rapid transit, 261–262
- Bus reliability measures, 320
- C**
- C++, 66, 218–219, 403
- CAD drawings, 68, 73
- Calibration, 37, 39, 42–43, 56, 86–88, 103, 133, 150–151, 170, 176, 180, 203, 211, 213, 216, 245, 249, 285, 301, 303, 309, 311, 313, 337–340, 343–344, 350, 352, 371, 376, 378, 392, 413
- California Motor Vehicle Code, 18
- Capacity calibration, 40–41
- Capacity-reducing events, 399, 401
- Car-following model, 19, 24, 26–30, 32, 34, 41–43, 75, 79–81, 96, 184–186, 212–213, 215–216, 277, 279, 281, 285–286, 289, 300–302, 309–310, 327, 329–330
- Catalonian highways, 223
- Cellular automata models, 329
- Central artery/tunnel network, Boston, 259
- Changing lanes, probability of, 247
- Choice probability, 14, 101, 105, 196–197
- C-logit, 195–196, 198
- Closed-loop evaluation, 256, 380–381
- CO₂ emission, 122–123, 125
- Collision-avoidance, 30
- Collision-avoidance rule, 329
- Collision-free behavior, 277, 279
- Commonality factor, 14, 196–197
- Communication beacons, 236
- Component object model, 88–89
- Conceptual model, 5
- Congestion
 - degree of, 116
 - detector, 160
 - distribution of, 149
 - function of, 30
 - location of, 40
 - pattern, 343–344
 - pricing, 175, 350, 392–393
 - shock wave propagation, 161
 - spillback, 343
- Connectors, 68, 78

- Contention handler, 144
- Continuity equation, 16, 34
- Continuous lateral movement, 79
- CONTRAM, 34, 178
- Cooperative merging, 81
- COPERT model, 91–92
- Courtesy yielding, 187, 265, 306

- D**
- Data analysis tool, 155
- Deceleration zone, 68
- Decision variables, 3, 332
- DELL Optiplex, 359
- Delphi, 166, 271, 287–288
- Demand matrices, 133, 135, 147, 150–151, 250, 355, 369
- Demand simulation process, 367
- Destination links, 408
- Device-based control strategies, 243
- Dial's assignment algorithm, 102–103
- Discrete choice theory, 13, 48, 84, 195, 202–203
- Downhill Simplex method, 313
- DRACULA traffic stimulator, 295–321
 - calibration and validation, 309–315
 - car-following models, 309–311
 - motorway merge model, 311–313
 - travel time distribution, 313–315
 - dynamic traffic assignment, 306–309
 - extended capabilities and advanced applications, 315–320
 - integrated highway and public transport, 316–320
 - two-lane rural roads overtaking, 315–316
 - model building principles, 295–296
 - model structure, 296–298
 - traffic simulation, 298–306
 - car-following model, 300–303
 - lane-changing model, 303–304
 - on-ramp merge, 304–306
 - simulation time periods and loop, 299–300
- Driving behavior models, 235–237, 243, 246, 263, 265
- DTA, *see* Dynamic traffic assignment (DTA)
- DUE, *see* Dynamic user equilibrium (DUE)
- Dummy Links, 408
- DXF, 178, 205
- Dynameq traffic stimulator, 34–35, 323–360
 - calibration and advanced modeling, 338–352
 - calibration, 343–344
 - calibration and stability, 340–342
 - route choice calibration, 350–352
 - traffic flow calibration, 344–350
 - core traffic flow models, 329–332
 - dynamic traffic assignment, 332–338
 - gradient-like algorithm, 335–337
 - mathematical model, 332–333
 - MSA-based algorithm, 333–335
 - time-varying step size adjustment, 337–338
 - model building principles
 - dynamic traffic assignment, 325
 - traffic flow simulation, 327
- Dynamic congestion pricing, 393
- Dynamic Network Assignment for the Management of Information to Travelers, *see* DynaMIT traffic stimulator
- Dynamic Route Assignment Combining User Learning and microsimulation, *see* DRACULA traffic stimulator
- Dynamic stochastic user optimum, 96, 101–102, 107, 109
- Dynamic traffic assignment (DTA) 10–13, 32–33, 48–49, 54, 101, 173, 175–176, 192–200, 202–203, 205, 212–213, 216, 229, 244, 254, 256, 275, 282, 295–297, 306–308, 323–326, 328, 332, 335–336, 338, 342–344, 351–352, 354–355, 359–360, 363–364, 375, 379, 401–402, 410–413, 417–419
- Dynamic user equilibrium (DUE), 11, 109, 175, 195, 198, 202–203, 229, 275, 418–419
- DynaMIT traffic stimulator, 254, 256–257, 259–260, 363–396
 - calibration and validation, 376–386
 - off-line calibration, 378–380
 - validation, 380–386
 - case studies and applications, 387–396
 - Irvine: Predictive VMS, 387–390
 - Lower Westchester County, NY, 390–392
 - core models, 367–369
 - graphical user interface (GUI), 374–375
 - online estimation, 371–374
 - transportation network and traffic control, 369–371
 - dynamic traffic assignment, 375–376
 - external applications, 386–387
