About the Authors

Lin Bai received the B.Sc. degree in Electronic and Information Engineering from Huazhong University of Science and Technology, Wuhan, China, in 2004, the M.Sc. (with distinction) degree in communication systems from the University of Wales, Swansea, UK, in 2007, and the Ph.D. degree in Advanced Telecommunications from the School of Engineering, Swansea University, UK, in 2010. He is currently with the School of Electronic and Information Engineering, Beihang University (Beijing University of Aeronautics and Astronautics, BUAA), Beijing, China, as an Associate Professor.

His research interests include signal processing of wireless communications, particularly multiple-input–multiple-output systems, array/smart antenna, and lattice-based approaches.

Jinho Choi (Senior Member of IEEE) was born in Seoul, Korea. He received the B.E. (magna cum laude) degree in electronics engineering from Sogang University, Seoul, in 1989 and the M.S.E. and Ph.D. degrees in electrical engineering from the Korea Advanced Institute of Science and Technology, Daejeon, Korea, in 1991 and 1994, respectively.

He is currently with the School of Engineering, Swansea University, Swansea, UK, as a Professor/Chair of Wireless. Since 2005, he has been an Editor of the *Journal of Communications and Networks*. He was an Associate Editor for the *ETRI Journal*. Since 2009, he has been on the editorial board of the *International Journal of Vehicular Technology*. He is the author of two books, which were published by Cambridge University Press in 2006 and 2010. His research interests include wireless communications and array/statistical signal processing.

Prof. Choi received the 1999 Best Paper Award for Signal Processing from the European Association for Signal Processing and the 2009 Best Paper Award from the International Symposium on Wireless Personal Multimedia Communications. From 2005 to 2007, he was an Associate Editor for the *IEEE Transactions on Vehicular Technology*.

 prevoting vector cancellation (PVC), 142

probability density function (pdf), 31, 83, 156, 174, 206
 probability of dimension reduction (PDR), 97, 102, 105
 projection, 23
 proximity factor, 53, 86
 pseudo-inverse, 81, 143
 pulse amplitude modulation (PAM), 3
 PVC-MIMO, 142

Q

Q-function, 18
 QR factorization, 23, 62, 92, 100, 114, 134, 149, 178, 191
 quadrature amplitude modulation (QAM), 3

R

random variable, 15, 23, 31, 84, 98, 105, 120, 174
 rank-deficient, 7
 Rayleigh fading, 32
 real-valued, 7, 56, 70, 75
 receive diversity order, 6
 received signal, 1
 receiver, 1
 residual vectors, 44
 rounding operation, 60, 72

S

S-Chase, 46
 sequential detection, 26
 set minus, 31, 143, 187
 shortest vector problem (SVP), 173
 SIC detection, 43
 SIC-list, 45, 108
 signal alphabet, 16, 133, 143, 170
 signal to interference plus noise ratio (SINR), 30
 signal-to-noise ratio (SNR), 1
 single-input single-output (SISO), 1, 141
 size-reduction, 198
 slow fading channel, 138, 157
 soft-bit, 122, 129
 sorted-QR decomposition, 108
 space division multiple access (SDMA), 167
 spatial diversity gain, 5
 spatial multiplexing gain, 5
 spectral efficiency, 1, 141, 167
 spectrum, 1
 sphere decoding, 109, 145
 statistical independent, 93

statistical properties, 25
 statistically independent, 156, 205
 sub-CRIS, 134, 135
 subdetection, 7, 92, 100, 113, 136
 subdetector, 7, 44, 46, 49, 136
 submatrix, 45, 94
 suboptimal, 8
 subspace, 22
 subvector, 45, 94
 successive interference cancellation (SIC), 6,
 92, 115
 sum of squared error (SSE), 45
 supremum, 86
 symbol energy, 21
 symbol error rate (SER), 36
 symbol level, 20
 symbol vector, 44

T

throughput, 10
 throughput efficiency, 171
 trace operation, 18
 transmission rate, 1
 transmitted symbol, 1
 transmitter, 1
 transpose, 2, 143
 tree search decoder-column reordering
 (TSD-CR), 142, 146

U

UBLR-based greedy (UBLRG), 197
 underdetermined, 7, 141

underdetermined integer least squares (UILS),
 145
 unimodular, 62, 116
 unitary, 25, 114, 134
 unitary transformation, 124
 updated basis LR (UBLR), 197
 uplink, 8, 169, 186
 upper block triangle, 96
 upper bound, 18, 82, 153, 154, 172
 upper trapezoidal, 145
 upper triangular, 25, 114, 134
 user selection, 10, 167, 169, 185

V

variance, 15
 vector, 2
 vertical Bell laboratories layered space-time
 (V-BLAST), 6, 92
 very large scale integration (VLSI), 124, 128
 Voronoi region, 119

W

Wishart matrix, 120
 words of memory, 125, 126

Z

zero-forcing (ZF), 6
 ZF-SIC, 24
