

# Index

## A

Additive effect, 20, 22, 112, 193  
Adenine, 9  
Adjusted p value, 40  
Admixture mapping, 28  
Affected sib-pair, 29  
Akaike's Information Criterion, 56  
Allele, 11  
Amino acid, 10  
Ancestry information, 28  
ANOVA  
    one-way, 185, 186  
    two-way, 186, 188, 189  
Antisense, 10  
Association, 22  
Association study, 23  
Asymptotic Bayes optimality under sparsity, 45  
Autosome, 12

## B

Backcross design, 18, 21  
Bayes classifier, 45, 212  
Bayesian credible intervals, 208  
Bayesian Information Criterion, 57  
Bayesian Model Selection, 57  
Bayesian statistics, 207  
Bayes risk, 44  
Benjamini–Hochberg procedure, 41, 45  
Bernoulli distribution, 18  
Best linear unbiased predictor, 200  
Bias of an estimator, 173  
Bonferroni inequality, 33  
Bonferroni procedure, 34, 35, 45, 121  
Boole's inequality, 33  
Bridge regression, 63

## C

Candidate gene study, 25  
Case control study, 27, 111  
Case random study, 27  
Central limit theorem, 164  
Chi-square test, 203, 204  
Chi-square test, independence, 111, 205  
Chromatid, 12  
Chromosome, 9  
Cis-regulatory, 10  
Cochran–Armitage trend test, 113  
Coefficient of coincidence, 15  
Coefficient of determination, 186  
Collapsing strategy, 123  
Common ancestor, 29  
Complementary sequence, 10  
Complementary strand, 9  
Complex trait, 125  
Conjugate prior, 208  
Conservative MTP, 35  
Consistency, 58  
Copy number variation, 11, 17  
Covariate, 118  
Critical value, 180  
Crossing experiment, 17  
Crossover, 12  
Cross validation, 64  
Cryptic relatedness, 119  
Cytosine, 9

## D

Diploid, 11  
Distribution  
    beta, 169  
    binomial, 170  
    chi-square, 165

- double exponential, 130, 169
- exponential, 168
- F, 167
- gamma, 168
- generalized Poisson, 171
- geometric, 171
- inverse gamma, 168
- negative binomial, 171
- normal, 163
- Poisson, 170
- Student's *t*, 166
- zero-inflated Poisson, 172
- DNA, 9
- DNA-bases, 9
- DNA strands, 9
- Dominance effect, 20, 22, 113, 193
- Dominance model, 113
- Double helix, 10
- E**
- Efficient Estimator, 175
- EIGENSTRAT, 120
- Elastic net, 63
- Epistasis, 51, 186
- Exon, 10
- Expectation Maximization algorithm, 80, 216
- Experimental population, 17
- F**
- Factor effects model, 187
- False discovery rate (FDR), 33, 41, 60
- False negative, 32
- False positive, 32
- Family data, 28
- Familywise error rate, 33, 35, 60
- Fine mapping, 26
- Fisher's exact test, 111, 205
- Five prime end, 9
- F1 population, 18
- F2 population, 19
- F-test, 186, 189
  - regression, 191
- G**
- Gamete, 12
- Gene, 10
- Generalized familywise error rate, 33, 37
- Generalized linear model, 194, 196
- General linear model, 192
- Genetic distance, 19
- Genetic map, 12
- Genetic marker, 16
- Genome wide association study, 26, 105
- Genomic control, 120
- Genotype, 11
- Genotype calling, 107
- Gibbs sampler, 209
- Goodness of fit, 203, 204
- Group lasso, 64
- Guanine, 9
- H**
- Haldane function, 13, 14
- Haploid, 11
- Haplotype, 11
- HapMap project, 24
- Hardy–Weinberg equilibrium, 114
- Henderson equations, 200
- Heritability, 21
- Heterozygous, 11, 107
- Hochberg step-up procedure, 37
- Holandric, 12
- Holm–Bonferroni procedure, 35
- Homologous, 11
- Homozygous, 11, 17, 107
- Hybridization, 107
- Hyperlasso, 129
- I**
- Identical by descent, 29
- Imputation, 110
- Inbred line, 17
- Information theory, 55
- Interaction, 187
- Interaction effect, 194
- Intercross design, 19
- Interference, 15
- Intron, 10
- J**
- James–Stein estimator, 43, 212
- K**
- Kosambi mapping function, 15
- Kruskal–Wallis test, 201
- Kullback–Leibler information, 55
- L**
- Lasso, 61, 63

LD blocks, 25  
 LD measure, 23  
 LD pattern, 25  
 Least angular regression, 63  
 Likelihood, 52, 176  
 Likelihood function, 176  
 Likelihood ratio test, 54, 196  
 Linkage, 14, 22, 25  
 Linkage analysis, 28  
 Linkage disequilibrium, 23  
 Link function, 196  
 Logistic regression, 53, 119, 129, 195  
 Loss function, 44

## M

Mapping function, 13  
 Markov Chain Monte Carlo, 208  
 Maximum likelihood, 52  
 Maximum likelihood estimation, 176  
 Maximum likelihood estimator, 176  
 MAX test, 116  
 MBIC, 59  
 MBIC2, 60  
 Mean square error, 174  
 Meiosis, 12  
 Mendelian trait, 25  
 Messenger RNA, 10  
 Method of moments, 175  
 Metropolis-Hastings, 46  
 Metropolis-Hastings algorithm, 209  
 Microarray technology, 107  
 Microsatellite, 11, 16  
 Missing heritability, 126  
 Mixed model, 121, 138, 198  
 Mixture model, 44  
 Model posterior, 57  
 Model prior, 59  
 Model selection, 51, 124  
 Morgan, 12  
 Morgan mapping function, 15  
 Multiple testing, 32, 33

## N

Nominal significance level, 34, 35  
 Non-parametric test, 200  
 Nucleobases, 9

## O

Odds, 54  
 Outbred population, 17, 23  
 Overdispersed exponential family, 195

Overdominance, 113

## P

Panmictic, 27, 119  
 Parametric Empirical Bayes, 47, 211  
 Parametric model, 52  
 Partial least squares, 64  
 Penalized likelihood, 56, 63, 65  
 Per-comparison error rate, 32  
 Per-family error rate, 32  
 Permutation tests, 38  
 Phased haplotypes, 24  
 Phasing, 110  
 Phenotype, 9  
 Poisson regression, 195  
 Polymorphism, 10, 16  
 Polyploid, 11  
 Population stratification, 118  
 Population structure, 27, 119  
 Posterior distribution, 208  
 Power, 180  
 Prediction, 199  
 Principal components analysis, 120  
 Prior density, 57  
 Prior distribution, 207  
 Protein, 10  
 p-value, 180, 181

## Q

QTL mapping, 21  
 Quadratic program, 63  
 Quantitative trait locus, 21

## R

Random sample, 164  
 Rank regression, 202, 203  
 Rao-Cramer inequality, 175  
 Rare variant, 122  
 Recessive model, 113  
 Recombinant inbred lines, 20  
 Recombination, 12  
 Recombination probability, 14  
 Reference panel, 110  
 Regression  
   linear, 190  
 Regulatory sequence, 10  
 Relative entropy, 55  
 Resampling, 38  
 Residual sum of squares, 53  
 Restricted maximum likelihood, 199  
 Ridge regression, 63

RNA, 10

## S

Sample mean, 164

Sample mean (standardized), 167

Score function, 54

Score test, 54

Segregation, distorted, 203

Sense, 10

Sex chromosome, 12

Shrinkage prior, 129

Šidák procedure, 34, 35

Šidák's inequality, 34

Significance level, 180

Single marker tests, 111

Single nucleotide polymorphism, 11, 16

Single step MTP, 36

SLOPE, 64

SNP array technology, 105

Sorted L-One Penalized Estimation  
(SLOPE), 64

Sparsity, 42

Splicing, 10

Spurious association, 119

Standard error of the mean, 166

Step-down procedure, 36

Step-up procedure, 36

Stepwise MTP, 36

Sum of squares, 185, 190

Sure independence screening, 132

## T

Tag SNP, 26

Three prime end, 9

Thymine, 9

Transcription, 10

Transcription factors, 10

Translation, 10

Transmission disequilibrium test, 121

Trans-regulatory, 10

T-test

one sample, 182

paired, 184

two sample, 37, 183

Two-stage design, 122

Type I error, 32, 180

Type II error, 32, 180

## U

Unbiased estimator, 173

Uracil, 10

## V

Variant, 17

## W

Wilcoxon rank-sum test, 37, 201

Wilcoxon signed-rank test, 202

## Z

Z-test

one-sided, 179, 180

two-sided, 181
