## A

- Acid, interactions with lime, 141, 173
- Acid deposition, environmental
  - effects of, 3–4
- Acid irrigation
  - effect on soil chemistry, 39–66
  - effects on mycorrhizas, 122–133
  - effects on soil, 258–272
  - on Lodgepole pine, 141–149
  - on Norway spruce, 149, 157
  - on Scots pine, 157–170
- Acid rain. *See* Acidic rain
- Acid treatments, scaled, 182
- Acidic deposition on forests, 298
- Acidic rain
  - effect on
    - exchangeable cations, 260–269
    - forest ecosystems, 301–319
    - microarthropods, 102–119
    - microbial biomass, 133–134
    - mycorrhizas, 312–314
    - plants, 302–319
    - soil organisms and decomposition of organic matter, 311–312
    - “natural,” 119
    - in Norway, 297
- Acidic soils. *See* Soil acidity
- Acidification, 81, 89, 91, 97
  - effects
    - on soils, 92–95
    - on vegetation, 222–229
  - Acidification rate of soil, 334–335
- Acidity. *See* pH
- “Acidophilic” microarthropods, 110, 112
- Air pollution, 3–7
- Aluminum (Al), 173
  - foliar concentrations, 142, 145, 148, 150, 152, 156, 159, 161, 164, 171, 205–208, 216–217
  - hypothesis concerning, 321
  - increased mobility in acidic soils, 308–310
  - increased mobilization of, 5, 6–7
  - leaching of, 251–254

- Aluminum (Al) (*cont.*)  
 after liming, 79, 88, 89  
 and mycorrhizas, 123–124  
 and seedling growth, 289–291  
 and soil biological processes, 310–311  
 and soil exchangeable acidity, 62–63
- Ammonium, 7
- Anions, leaching of, 241–244, 276–278
- Artificial rain, 24–28
- B**
- B. *See* Boron
- B-2 experiment, 221–228
- Basal area growth, 186–187, 194–195, 198–199
- Base cations, 5  
 and essential plant nutrients, 304–307  
 ion budgets and mobilization rates, 272–273  
 leaching of, 246–247  
 after liming, 75–78, 82–87  
 and manganese, 46, 48, 51, 55–61  
 uptake of, 61–62
- Base saturation, soil. *See* Soil base saturation
- Biology, soil. *See* Soil biology
- Birch. *See* European white birch
- Birch leaves, 104
- Boron (B), foliar concentration, 142, 150, 156, 159
- C**
- Ca. *See* Calcium
- “Calciophilic” microarthropods, 111, 112
- Calcium (Ca), 46, 48, 51, 55–61  
 deficiency, 175, 218–219  
 exchangeable, 269–272  
 foliar concentration, 142, 145, 147, 150, 152, 156, 159, 161, 164, 171, 205–208, 214–215
- Carbon/nitrogen (C/N) ratios, 96
- Cation exchange capacity (CEC), 39–40, 48, 66, 70
- Cations  
 leaching of, 244–258, 278–279  
 mobilization by weathering and mineralization, 279–281  
*See also* Base cations; Exchangeable cations
- CEC. *See* Cation exchange capacity
- Cellulolytic activity in soil, 133
- Cellulose, decomposition rate of, 136–137
- Chemical variables, correlation coefficients for mycorrhizal and, 130
- Chloride (Cl), leaching of, 242–243
- Climatic data, 11–14
- Colonization experiment, soil pH and, 103
- Competition among microarthropods, 118–119
- Copper (Cu), foliar concentration, 142, 146, 148, 150, 153, 156, 159, 161, 165
- Correlation coefficients  
 between foliar element concentrations and soil chemical properties, 206–210  
 for mycorrhizal and chemical variables, 130
- Crown density, 8, 299
- Cu. *See* Copper
- D**
- Decomposition rate  
 of cellulose, 136–137  
 of needle litter, 136–138  
 of organic matter, 312
- Defoliation, degree of, 5
- Deposition climate at study areas, 17, 22
- Discoloration, 5
- Dose responses, 182
- E**
- Ecosystems, forest, 301–319
- Ectomycorrhizal symbiosis, 230
- Ectomycorrhizas, artificial soil acidification and, 122–133

Egg production of microarthropods (fecundity), 117

Enchytraeids, 300

Entisol, 248

European white birch, 181, 188–191

Evapotranspiration  
annual average, 241, 274

Exchangeable acidity, soil. *See* Soil exchangeable acidity

Exchangeable calcium, 269–272

Exchangeable cations  
concentrations of, 38  
effect of acidic rain, 260–269

Exchangeable magnesium, 305–306

Exchangeable manganese, 56

Experimental approach, 299–301

Experimental design, 24–27

Experiments, 24–33

Extractable sulfate, soil, 63–66

**F**

Fecundity of microarthropods (egg production), 117

Field experiments, 25, 180

Field lysimeter series, 26

Fish, freshwater, 298

Fish kills, 3, 297–298

Foliar element concentrations, 206–210

Foliar leaching, 303

Food conditions, 116

Forest decline, 5–8  
causes of, 321–323  
mycorrhizas and, 123  
“new,” 4, 5, 322, 323  
in Norway, 319–323

Forest ecosystems, 301–319

Forestry practices, 7–8

Forests in Norway  
acidic deposition on, 298  
long-distance transported air pollutants, 3–5

Freshwater fish, 298

Fungal hyphae, 116

Fungi  
mycorrhizal, 233, 236  
soil-inhabiting saprophytic, 236  
wood-inhabiting, 236–237

**G**

Gaseous pollutants, 10

Germination, 287–292

Girth  
at breast height, tree, 181  
total, 183

Ground vegetation  
B-2 experiment, 221  
mycoflora, 230–237

Groundwater, 11, 30  
application, 190, 191  
data, 241

Growth  
basal area, 186–187, 194–195, 198–199  
and essential plant nutrients, 314–316  
height, 182–183, 185–186, 190–191, 194  
of trees, 180–202  
volume, 187–188, 197–198

**H**

Height growth, 182–183, 185–186, 190–191, 194

Humidity index, Martonn's. *See* Martonn's humidity index

Hyphae, fungal, 116

**I**

Inceptisol, 248

Internal acidification, 91

Ion budgets of base cations, 272–273

Iron (Fe), foliar concentration, 142, 146, 148, 150, 153, 156, 159, 161, 165, 171

**K**

K. *See* Potassium

**L**

Leachate pH, 247–251

Leaching  
of aluminum, 251–254  
of anions, 241–244, 276–278  
of base cations, 246–247, 304–307

- Leaching (*cont.*)  
 of cations, 244–258, 278–279  
 of chloride, 242–243  
 foliar, 303  
 of nitrate, 243–244  
 of nutrients from soils, 274–283  
 of sodium, 244, 246  
 of sulfate, 244, 245
- Lime  
 and interactions with acid, 141  
 treatments with, 24. *See also* Liming
- Lime potential (LP), 31
- Liming, 66, 67  
 effect on  
 base cations and manganese, 75–78, 82–87  
 leaching, 254–258, 281–282  
 microarthropods, 105–109  
 soil chemistry, 96, 269–272  
 soil exchangeable acidity and aluminum, 79, 88, 89  
 soil pH and base saturation, 70–80  
 sulfur, 80–81, 90  
 tree growth, 201–202  
 tree nutrition, 173–175
- Litter, decomposition rate of needle, 136–138
- Lodgepole pine  
 growth, 181, 182–184  
 nutrition, 141–149
- LP. *See* Lime potential
