

Index

- active walks 281–290, 293–304
- aggregation 173–175, 248–249, 296–300
- ATP hydrolysis 314–317
- blowtorch theorem 2–4
- Brusden-Holmes oscillator 86
- caustics 129–135
- domain walls 4
- epitaxial growth 205–221
- escape from a metastable state 2–4, 14, 59, 85, 109–119
- fluctuation-induced transport 4, 121–127, 307–319
- generalized Melnikov function 81–84
- Godel incompleteness theorem 99
- Feynman ratchet 309–310
- Hodgkin-Huxley equation 332–334
- homeostasis 439
- ice-age cycle 12–15
- information engine 122–127
- interface propagation 4–9
- instantons 113–118, 129–135, 139–153
- interspike interval histogram 349–352, 371–378
- ion channels 331–340
- kinks 4
- Laplacian growth 225–236, 239–255
- linear response theory 17–20, 37, 58
- mechanoenzymes 307–308
- microtubules 307–308, 321–329
- noise-induced linearization 53–68
- noise-induced transition 160–166, 343–349
- nonequilibrium bath 122–123
- nonequilibrium potential 114, 129
- neurons 343–344, 359–391
- optimal paths, see instantons
- path integrals 129, 139–153
- periodically driven systems 24–28, 35–52, 70–76, 311–314, 363
- physical information 127
- pupil light reflex 345–348
- quantum noise 434
- ratchets 321–329, see also fluctuation-induced transport
- reaction-diffusion equations 173–198, 295–299
- ring laser 15–17
- saddle point 110, 133–135
- separatrix 110–112
- state-dependent noise 1–9
- Stefan problem 240
- stem cell dynamics 421–424
- stochastic chaos 69–80
- stochastic resonance 11–33, 367–370
- topological singularities 4, see also caustics
- unstable manifold 114, 130
