

Index

A

ACL reconstruction. *See* Anterior cruciate ligament (ACL) reconstruction
Adhesive joints, 94, 102–105
Adhesives, 89, 90, 102, 105, 225
Advanced anatomical models, 140
Analysis, 3, 10, 24, 31, 34, 53, 58, 77, 78, 93, 112, 113, 118, 120, 121, 124, 125, 128, 129, 133, 137–168, 183
Angiogenesis, 14, 17, 20, 35, 50, 51, 54, 60, 69, 78, 79, 83
Annulus fibrosus, 140, 152, 157, 159
Anodic half-reaction, 67, 68, 83
Anterior cruciate ligament (ACL) reconstruction, 107, 108, 117, 120, 122
Antioxidant, 69–72, 77, 78
Arthroscopy, 120, 121
Aseptic loosening, 66–69, 83, 177–179, 182, 188, 194, 195

B

BCN. *See* *n*-Butyl cyanoacrylate (BCN)
Bioactive ceramics, 6
Bioactivity, 4, 12, 14, 18, 52, 57, 112, 183, 203, 211, 218
Bioadhesive, 89–105
Biocompatibility, 12, 18, 66, 68, 72, 110, 179, 183, 188, 189, 193–194, 203, 229, 230
Biodegradable polymers, 2, 10, 108, 110–112, 150
Biodegradable polyurethane scaffolds, 227
Biodegradable, 2, 10, 108, 110–112, 129–132, 150, 203, 226, 227

Biomaterials, 2, 10, 17–35, 51, 52, 56, 57, 59–61, 65, 72, 107–133, 179, 187–192, 203, 205, 226, 227, 234, 235
Biomechanical, 1, 117–120, 138–142, 150, 157, 162, 163
Biomimetic, 4, 7, 8, 10, 55, 61, 203
Bioprinting, 231–234
Bone, 1, 18, 45, 65, 108, 137, 173, 235
Bone reconstruction, 145
Bone-screws interfaces, 142
n-Butyl cyanoacrylate (BCN), 89–105

C

Calcium phosphates, 7, 8, 13, 18, 112
Carbon nanotubes, 173–195
Catalase, 70, 77, 78
Cathodic half-reaction, 67, 68, 80–83
Cell adhesion, 4, 11–13, 32, 34, 56, 58, 60, 188, 209, 213, 219, 226
Cell development, 17, 18
Cell-hydrogel composites, 215
Cement microstructure, 191, 192
Cement shrinkage, 179–180, 183
Cervical spine, 137–168
Cervical vertebra, 141–150
Chemokines, 29–31, 33
Chitosan-HA scaffolds, 215
Clinical studies, 83, 90, 120, 132
CNT-reinforced biomaterials, 187–192
Cobalt, 79
Composite materials, 2, 5, 7, 8, 110, 112, 113, 124, 129, 130, 187, 193
Computer-aided tissue engineering, 139
Computer models, 138, 139, 205

Computer tomography (CT), 117,
139–142, 145, 148, 149,
167, 205
Controlled drug release, 195, 220
Corrosion, 66–69, 72, 73, 79–83
Crosslinking, 208, 221, 226–230, 234
Cyanoacrylate, 89–105
Cyanoacrylate monomers, 89–104

D

Degradable polymer, 10
Degradation, 1, 4–6, 8, 9, 14, 19, 20, 29, 30,
32, 33, 45, 51, 56, 66, 67, 69–71,
78, 83, 90, 91, 101, 108–112, 121,
122, 203, 228

E

ECM. *See* Extracellular matrix (ECM)
ECN. *See* Ethyl cyanoacrylate (ECN)
Electrospinning, 2, 10, 11, 13, 235
Endothelial cells, 17, 29, 31, 34, 35, 65–83,
226, 234, 235
Epithelial cells, 18, 29, 31–34, 49, 74,
178, 194
Ethyl cyanoacrylate (ECN), 89–105
Extracellular matrix (ECM), 1–4, 10–14,
17–20, 23, 26, 29, 30, 32–35, 44,
46, 48, 49, 51, 52, 60, 69, 76,
202–205, 234, 235

F

FDM. *See* Fused deposition modeling
(FDM)
FEM. *See* Finite element method (FEM)
Fibroblast, 17, 18, 29, 31–33, 35, 49, 50, 67,
69, 74, 79, 188, 230
Fibronectin, 18, 20, 32, 48, 55, 210, 228
Filament winding, 5
Finite element method (FEM), 125, 128,
140–142, 157
Finite element modeling, 117, 140, 141,
180, 235
Functional implants, 150–157
Fused deposition modeling (FDM),
130–132, 211

G

Glutathione, 70, 71, 77
Granulation tissue, 34, 49, 66, 69

H

Heterogeneous topography, 102, 105
Hip joint, 173–174
Hydrogels, 201–235

I

Immunohistochemical, 32, 34, 35
Implant integration, 66, 69, 80
Implants, 5, 14, 17–35, 59, 65–69, 72, 73, 76,
78, 80–83, 90, 107–110, 112, 118,
126, 128, 129, 132, 137, 138, 141,
150, 152, 153, 157, 162, 174, 175,
177–180, 182, 183, 187, 188, 190,
191, 194, 203, 204
Inflammation, 18, 26, 29–31, 33, 34, 66, 67,
81, 83, 108, 175, 179, 193
Inflammatory processes, 18, 29
Inflammatory response, 17, 31, 33–35, 66,
122, 179, 193, 231
Injection moulding, 129, 130, 132
In situ photopolymerization, 210
Interface, 6, 33, 67–69, 72, 79, 83, 115, 119,
142, 157, 158, 161–168, 177, 179,
180, 183, 184, 187, 188, 191, 195,
218, 231
Interference screw, 107–133
In vivo, 6, 14, 31, 51, 52, 54, 56, 67, 76, 78,
79, 82, 138, 177–179, 182, 183,
193–195, 203

J

Joint replacement, 65, 173–174, 190

K

Knee, 65, 72, 107, 115, 133, 174

L

Laser-based, 205–211, 221, 229, 231
Laser sintering, 206

M

Matrix metalloproteinases (MMPs), 19–35
Mechanical properties of biomaterials, 3–5,
11, 12, 65, 66, 72, 108, 110, 112,
117, 125, 128, 129, 132, 138, 140,
158, 167, 178–179, 182, 184, 185,
190–192, 195, 227–229, 235
Mesenchymal stem cells (MSCs), 11–14, 54

Metals

- alloys, 83
- implants, 66–69, 72, 82, 83
- ions, 67–73, 76, 79, 83, 193
- particles, 66, 67, 69

Migration, 2, 3, 13, 14, 18, 29–34, 49, 54, 56, 82, 107, 108, 153, 179, 203, 215

MMPs. *See* Matrix metalloproteinases (MMPs)

Modeling, 22, 26, 27, 35, 137–168

Morphogens, 43–61

Morphology, 2–4, 7, 10–12, 14, 43, 44, 82, 179, 226

Moulding, 204

MSCs. *See* Mesenchymal stem cells (MSCs)

N

Nanotopography, 11, 12

Nozzle-based, 205, 206, 211–218, 222

Nucleus pulposus, 140, 152, 157, 159

Numerical analysis, 137–168

O

n-Octyl cyanoacrylate, 89–105

Organ printing, 231

Orthopaedic bone cement, 175, 177–179, 189

Osteoinductive, 50

Oxidative stress, 65–83, 193

P

PCL. *See* Polycaprolactone (PCL)

Peptides, 20, 21, 29, 52–58, 61, 189, 210

Peri-implant tissues, 31, 34, 35, 66, 69, 72

Photon-polymerization, 208–209

Physiological serum solution, 93

Pig skin test, 93, 94, 105

PMMA bone cement. *See* Poly methylmethacrylate (PMMA) bone cement

Polycaprolactone (PCL), 5, 7, 8, 11–13, 108, 110, 111, 213, 216, 217, 220, 225

Polymer based composite, 4

Polymerization, 90–92, 100–102, 104, 105, 109, 110, 207–209, 221, 225, 229, 230

Poly methylmethacrylate (PMMA) bone cement, 188–192, 194, 195

Porosity, 2, 4, 6, 11, 109, 129, 180–182, 203, 204, 221, 224, 227

Printer-based, 205, 206, 214, 218–227

Progenitor cells, 210

Proliferation, 6, 10–12, 18, 32, 33, 45, 49, 50, 54, 73, 74, 188, 203

Pro-morphogens, 43–61

Proteinases, 19

Protein backbone, 23

Pullout strength, 117–120, 163, 168

R

Rapid prototyping, 2, 129, 130, 201–235

Reactive oxygen species (ROS), 66, 68–73, 76–79, 81–83

3D reconstruction, 139, 141, 167

Retrieval analysis, 120

ROS. *See* Reactive oxygen species (ROS)

S

Scaffold-based tissue engineering, 2, 205–227

Scaffold-free tissue engineering, 231–235

Scaffolds, 1–14, 52, 57–61, 112, 129, 189, 201, 203–206, 209–213, 215, 218, 219, 221, 225–228, 230–232, 234, 235

Scanning electron microscopy (SEM), 5, 13, 75, 93, 102, 103, 105, 120–123, 130

Screw design, 107–133

Screwdriver, 113–117, 119, 128, 154

Sealing, 90

Self-tapping, 113–116, 119, 124, 128, 133, 154

SEM. *See* Scanning electron microscopy (SEM)

Simulation, 23, 24, 80, 117, 124, 138–140, 142, 146, 149, 154, 157–168, 178

SOD. *See* Superoxide dismutase (SOD)

Sol gel, 7, 8

Stabilization system, 142, 152, 167

3D structures, 46, 203, 211, 225, 226

Superoxide dismutase (SOD), 70, 77, 78

Surface phase, 145

T

Thermal conductivity, 184, 191

Thermal decompositions, 98, 99, 101, 102, 104, 105

Thermal necrosis, 178, 182, 190, 191

Thermal properties of biomaterials, 101, 105, 182, 190, 191

TIMPs. *See* Tissue inhibitors of matrix metalloproteinases (TIMPs)

Tissue engineering, 1–14, 50, 52, 129, 139, 201, 205–227, 231–235

Tissue inhibitors of matrix metalloproteinases (TIMPs), 19, 20, 25, 26, 33–34

Tissue reconstruction, 149

Tissue regeneration, 2, 3, 18, 43–61, 112, 228
Tissue remodeling, 17–35
Tissues joint, 104, 105
Tissue transplantation, 201
Titanium (Ti), 65, 66, 68, 69, 72, 73, 76–79,
81, 82, 150, 158, 159, 161, 182,
187, 188, 217
Titanium oxide (TiO₂) layer, 66, 68, 72, 73, 76,
78, 82

W

Wear debris, 66, 72, 73
Wound closure, 49, 89–105
Wound healing, 11, 17, 31, 33, 35, 69, 72, 73,
81–83
