A

“Academic freedom”, 11, 12, 288, 304

Accounting

- audit pricing (*see* Audit pricing)
- capital markets, 43–44
- ex ante* control, 43
- principal-agent model (*see* The Principal-agent model)
- process and strategic interaction, 43
- transfer pricing and budgeting (*see* Transfer pricing)

Agent’s choice

- bargaining power, 166–167
- census data, 168
- chain affiliation, 169
- characteristics, 167–170
- contract-choice problem, 168
- endogenous matching, 169–170
- franchisees, 168
- Generalized Nash Bargaining solution, 167
- high outside option, 167–168
- implicitly, 166–167
- local-market risk, 169
- market intelligence and training, 168
- non-compete clauses, 169
- outlet size, 167
- outside option, 167–168
- principal’s outside option, 167
- propensity to contract out, 144, 145

Asset pricing

CAPM (*see* Capital asset pricing model (CAPM))

- continuous time models, 20
- market efficiency, 19–20

Auction revenue

- and affiliated values
- bidding behavior, 340

- construction executives, common-value auction experiments, 340
- English auction, 339
- in-class experiments, 341
- pure common values, 337
- revenue differences, 338–339
- subject behavior, 340
- winner’s curse, 338, 339
- and classroom experiments, 330, 336, 361
- and empirical evidence
 - ascending auctions, 347
 - asymmetries and entry costs, 335–337
 - bidding for films, 341, 342
 - British 3G telecom auction, 357
 - CCA, 356–357
 - combinatorial auctions, 355–356
 - demand reduction, U.S. spectrum auctions, 348
 - elevated bidding, 330
 - heterogeneous bidding behavior, 331
 - in-class experiments, 341
 - multi-unit experiments, 347
 - sealed-bid auction and experiments, 330, 331
 - subject behavior, 340
 - symmetric independent private values, 332
 - winner’s curse, 340
- and equivalence, 327–332

Auctions

- and asymmetries, 332–334
- and bargaining, 324–326, 360
- and bidding costs, 334–337
- bidding vs. bargaining, 324–326
- and common unknown values, 337, 339, 341

Auctions (*cont.*)

- and competition among bidders, 325
- dropping out, 362
- Dutch auction (*see* Dutch auctions)
- and efficiency
 - combinatorial bidding, 356
 - English auction, 326, 331, 353
 - sealed-bid procedures, 331
 - simultaneous auctions *vs.* sequential ones, 356
 - Vickrey auction, 346, 354
- English auction (*see* English auctions)
- hybrid auction, 361
- and independent private values (*see* Independent private-values (IPV) model)
- “linkage principle”, 361–362
- mail bidder, 360
- multi-object (*see* Multi-object auctions)
- real goods, 360
 - and reserve prices, 337, 360
- single-object (*see* Single-object auctions)
- spectrum auctions, 360
- value and revenue maximization, 324

Auditor resignations

- high-risk and low-risk clients, 72
- incumbent auditor bids, 75–76
- incumbent bids, *L* clients, 73–75
- “wealth constrained”, 72–73

Audit pricing

- and auditor resignations (*see* Auditor resignations)
- and audit risk, 70–72
- institutional features, 63
- take-it-or-leave-it pricing, 63–70

B

Bargaining

- academic research, power, 191
- and BATNA, 193
- causes, impasse/delay, 192
- effect, competition, 193–194
- factors, power, 191
- and game-theoretic models (*see* Game-theoretic models)
- impatience and sequential bargaining, 192–193
- and incomplete contracts, 197
- and inefficiency, 195, 196
- and multiple players (*see* Multi-person bargaining)
- Nash program of research, 189
- pioneers, 190

- practitioners, 190
- principles, 189
- private information, 194–196
- and Rubinstein’s offer model, 193
- self-interest and fairness, human action, 190

BATNA. *See* “Best Alternative to a Negotiated Agreement” (BATNA)

“Behavioral” game-theoretic models, 12–13

“Best Alternative to a Negotiated Agreement” (BATNA), 193

Bidder collusion

- common value auctions and winner’s curse, 382–383
- and countervailing power, 388–393
- disclosure, auctioneer, 385–387
- and discriminatory auctions, 371, 379, 381
- efficiency effects
 - cartel stability, 387
 - colluding bidders, 388
 - as countervailing power, 388–393
 - detection, 387
 - pre-auction investments, 393–395
- and English auctions
 - bidder withdraw, 373
 - collusive gain, 376
 - entry, 377–378
 - “quick knock”, 392
 - risk averse bidders, 378
- and entry, 377–378
- and first-price auctions
 - collusive gain, 376
 - one-shot, 377
 - risk averse bidders, 378
 - strategic behavior, 373
- and informational advantage, 383–384
- and informational disadvantage, 384–385
- and information disclosure, 385–387
- and multi-object auctions, 369
- multiple units, sale
 - noncooperative behavior, 379–380
 - ring bidders, 380
 - uniform price auction, 381
 - winning bids, 381
- and noncooperative bidding (*see* Noncooperative bidding and bidder collusion)
- and posted pricing, 368, 370
- and pre-auction investments, 393–395
- single-object auction (*see* Single-object auctions)
- and sustainability, 380, 381

- and uniform-price auctions, 371, 379–381, 391, 395
- Budgeting (budget mechanisms), transfer pricing. *See* Transfer pricing
- C**
- Capital asset pricing model (CAPM)
 - econometric techniques, 19
 - expected return, asset, 18
 - hypotheses, 19
 - mean-variance framework, 18
- CAPM. *See* Capital asset pricing model (CAPM)
- Carroll towing
 - and defendant and plaintiff care, 235
 - description, 236
 - economists, 238
 - and extensive form games, 242, 254
 - Hand Formula, 239
 - hypothetical example, 237, 238
 - initial assumptions, 236–238
 - legal economists, game theory, 236
 - and liability rules, 240
 - liability standards, 239–240
 - and model assumptions (*see* Model assumptions and carroll towing)
 - rules, liability, 240
 - tug owner, 238
- CCA. *See* Combinatorial clock auction (CCA)
- Combinatorial clock auction (CCA), 356–357
- Common knowledge of rationality
 - “classic” game theory, 310, 312
 - defined, guessing game, 311, 312
 - dominated strategy, 310–311
 - equilibrium predictions, 310
 - experimental participants, 310
 - “forcing” players, 313
 - individual confusion, 313
 - iterated dominance, 313
 - nuanced predictions, behaviors, 314
 - winning stocks, 311
- Common value (CV) model, 372
- Contract choice
 - application, 160–161
 - delegation of pricing, 165–166
 - effort/sales relationship, 161
 - French bottled water market, 161
 - and incentive factors
 - agent/franchisee effort, 145–146
 - basic model, 142–143
 - car retailers and manufacturers, 160
 - costly monitoring, 148–153
 - franchisor headquarters, 159
 - local-market risk, 143–145
 - multiple tasks, 155–156
 - outlet size, 146–148
 - performance and ownership incentives, 160
 - principal/franchisor effort, 153–155
 - royalty rates, 159
 - salesforce literature, 159
 - salesperson level, 159
 - share parameters, 158
 - upfront franchise fees, 159
 - U.S. franchisors, 159
 - within-firm contract uniformity, 156–158
 - possibilities, 161
 - and product substitution, 163–164
 - and spillovers, 161–163
 - standard incentive cum insurance model, 160
- Cooperation and RJVs
 - advantage, under uncertainty, 273–274
 - AJ and KMZ models, 273
 - Cournot duopoly, 272
 - R&D intensity, 272
 - spillover effects, 272
- Cooperation in R&D
 - court and willingness, public authority, 265–266
 - game theoretical concepts, 266
 - incomplete contracts (*see* R&D with incomplete contracts)
 - innovative activity, 265
 - patenting and licensing (*see* Licensing and patenting, cooperation in R&D)
 - RJVs (*see* Research joint ventures (RJVs))
- Coordination and budgeting
 - budget-based mechanism, 60–61
 - decision rules and wage schedules, 56–57
 - first-best production plans, 55
 - Groves’ type mechanisms, 54
 - and Kanodia model, 54
 - marginal costs and revenues, 55
 - nonstochastic environment, 56
 - optimal coordination mechanism, 54
 - optimal decision rules, 58–60
 - “per unit” quantities, 56
 - truth and participation constraints, 57–58
- Corporate finance
 - asset pricing, 29
 - and capital structure
 - asymmetric information, 24
 - financial market decisions, 25
 - firm’s reputational incentives, 25
 - holders and bondholders, 24

Corporate finance (*cont.*)
 “pecking order” theory, 24
 project payoffs, 24
 retention means, 23
 trade-off theory, 23
 and dividend signalling models, 22–23
 intermediation, 28
 IPOs (*see* Initial public offerings (IPOs))
 market for corporate control, 25–26

Costly monitoring, incentive factors and
 contract choice
 agent’s effort, 148
 costs, 151
 effort/sales relationship, 150
 empirical literature, 149, 151, 152
 noisy signals, 150
 optimal contract, 151
 outcome-based compensation, 150
 outlet density, 152
 principal, 148
 propensity to contract out, 151–153
 real-world manufacturer-retailer
 relationships, 150
 risk-neutral principal, 150

CV model. *See* Common value (CV) model

D

Direct revelation game (DRG), 214
 DRG. *See* Direct revelation game (DRG)
 Dutch auctions
 description, 323, 327
 highest sealed-bid, 327
 and sealed-bid, 327, 328

E

EDI. *See* Electronic Data Interchange (EDI)
 Efficient markets hypothesis, 19
 Electronic Data Interchange (EDI), 120
 English auctions
 bidders, 328
 buyer’s dominant strategy, 325, 327
 description, 323
 efficiency rating, 330
 equilibrium revenue, 333
 expected revenue, 331
 and sealed-bid auction, 332

Experiments and game theory
 business research and practice, 308
 “classic” game theory assumptions, 309
 common knowledge (*see* Common
 knowledge of rationality)
 description, 308

induced valuation, 308
 observational data, 309
 outcomes and payoffs, 314–317
 payment, 308–309
 theoretical insights and organizing
 structures, 307
 theoretical predictions, 307–308

F

Finance
 asset pricing (*see* Asset pricing)
 classical analysis, 17
 corporate (*see* Corporate finance)
 description, 17
 game-theory approach (*see* Game-theoretic
 models)
 higher order beliefs (*see* Higher order
 beliefs)

“Fixed Term” contract
 conjectured investments, 294
 faculty employee, 294–295
 investment decisions, 296–297
 wages offered to employees, 295–296

Franchising
 agent effort, 178
 and bargaining power, 166–169, 176
 certainty-equivalent income, 177
 and costly monitoring, 148–153, 179
 delegation of pricing decision, 182
 and franchisee effort, 145–146
 and franchisor effort, 153–155, 179
 and integration *vs.* separation, 157, 172
 and local-market risk, 143–145
 multiple tasks, 179–180
 and outlet size, 146–148, 178
 product substitution, 181
 risk, 177–178
 spillovers within chains, 180–181

G

Game-theoretic models
 asset pricing, 29
 assumptions (*see* Model assumptions and
 carroll towing)
 behavioral implications, payoff structures,
 243
 carroll towing, 237, 242
 corporate finance (*see* Corporate finance)
 criticisms of
 “basic sentence” without auxiliary
 assumptions, 203

 noncooperative bidders, 393–394
 socially valuable investments, 394
- The Principal-agent model
 and franchising
 and monitoring, 46–50
 and signal aggregation, 50–53
- Priority pricing, queueing system
 basic charge and a priority surcharge, 115
 description, 104, 112
 game theoretic model, 113
 market mechanisms, 112
 model, 113–114
 natural setting, 112–113
 optimal priority pricing scheme, 114–115
 processing time, 115–116
 quadratic term, 116
 service protocols, network of queue, 116
 type-*k* jobs, 116
- Private information, bargaining
 “cheap talk”, 195

- disagreement and inefficiency, 196
 - negotiations, 194–195
 - persistence, delay and impasse, 195
 - tradeoffs, creating value and claiming share, 194
- R**
- R&D with incomplete contracts
 - adequate incentives, 277–278
 - analysis, financial constraints, 280
 - contingent ownership, 279
 - cumulative/sequential innovation, 277
 - ex ante* incentives, 281–282
 - and imperfect patents, 279
 - inalienability argument, 279
 - incomplete contract setting, 278
 - ingredients, market, 280
 - issue, vertical integration, 278
 - moral-hazard-in-teams problem, 280–281
 - non-integrated case, 278–279
 - patenting, 278
 - and profit expropriation, 280
 - royalty-based contract, 281
 - vertical integration, innovation and competitors, 282
 - Research joint ventures (RJVs)
 - competing firms, 270
 - competitive toughness, 271
 - and cooperation, 272–274
 - cost reducing innovation, 270
 - and gains relative to noncooperation, 273–274
 - “incentive to invent”, 270
 - inverted-U relationship, 271
 - and knowledge sharing, 274–277
 - monopoly, 270
 - Schumpeterian effect, 272
 - RJVs. *See* Research joint ventures (RJVs)
- S**
- Sales-force compensation
 - company operation/in-house, 141
 - franchising and external, 140
 - integration problem, 141
 - internal, 140, 159–160
 - management, 157
 - SCM. *See* Supply chain management (SCM)
 - Screening, defendant’s offer
 - court costs and litigation, 212
 - optimal offer D, 211
 - plaintiff’s optimal acceptance strategy, 210
 - problem, adverse selection, 211
 - uninformed defendant, 211
 - Sealed-bid auctions
 - bidding behavior, 331
 - exposure problem, 351
 - highest estimate team, 342
 - reserve prices, 360
 - revenues, 336
 - sequential, 344
 - single items, 349
 - winning bidders, 340, 342
 - Settlements out of court
 - and asymmetric information (*see* Symmetric and asymmetric information)
 - description, 207
 - direct revelation approach, 208
 - and equity, 227–228
 - “ideal” settlement mechanism, 208
 - and minimizing litigation, 213–218
 - plaintiff and defendant, 208
 - and screening offers, 210–212
 - and signalling offers, 212–213
 - and simultaneous sealed offers, 224
 - and symmetric information (*see* Symmetric and asymmetric information)
 - and two-sided private information (*see* Two-sided private information)
 - “work horse” models, 207
 - Severance contracts, 303
 - Signal aggregation, principal-agent model
 - exponential family, 51
 - “informativeness”, 51
 - optimal compensation contract, 50
 - optimal linear aggregate, 51–53
 - performance measures, 51
 - Signaling, plaintiff’s offer
 - acceptance probability, 212–213
 - mixed strategy, 212
 - settlement probability, 213
 - types, equilibrium, 212
 - Single-object auctions
 - affiliated values, 337–342
 - asymmetries
 - “Anglo-Dutch” hybrid auction, 333
 - bidder preferences, 333–334
 - English and sealed bid auctions, 333
 - sealed-bid auction, 332
 - bidding costs and entry
 - asymmetries and entry costs, 335–337
 - ex ante* entry cost, 334
 - symmetric IPV model, 335
 - transaction costs, 334

- Single-object auctions (*cont.*)
 collusion, 374–376
 English to first price, 378
 entry, 377–378
 inferences, observed bidding behavior, 378–379
 IPV model (*see* Independent private-values (IPV) model)
 noncooperative behavior, 372–374
- Strategic consumers
 and consumer search
 “clearinghouse model of search”, 95
 “consideration sets”, 95
 game-theoretic formulations, 95
 net price-sensitivity, 96
 non-price dimensions, 95–96
 “partitioned prices”, 96
 “price opacity”, 96
 simultaneous search, 94
 and signalling
 “feature advertising”, 98
 game-theoretic sense, 96–97
 money-back guarantees, 96
 repeat-purchase, 98
 signaling instruments, 97
 two-period model, 97
- Supply chain management (SCM), 103, 131
- Symmetric and asymmetric information
 court’s verdict, 209
 defendant’s offer, screen, 210–212
 examples, 209–210
 fundamental information settings, 209
 minimizing, frequency of litigation, 213–218
 plaintiff’s expected value, 208–209
 plaintiff’s offer, signal, 212–213
 pre-trial negotiations and litigation, 208
- T**
- Take-it-or-leave-it pricing
 equilibrium audit prices, 69–70
 equilibrium calculation, 64
 financial statements, 63–64
 optimal mechanism, 64
 optimal pricing mechanism, period two, 65–69
 period-one audit, 64
- Tenure
 and academic freedom, 288–289, 304
 and “Fixed Term” contract, 294–297
 guaranteed lifetime employment, 289
 and imperfect competition, 289, 302
- incentives, academic administration, 303–304
- incumbent faculty, 290
 and lifelong employment, 299–302
 model
 discipline-specific investment, 292
 faculty type, performance and investment, 293
 industry-specific productivity, 292
 output realization, 291
 possible contracts, 294
 and renegotiation, 303
 senior experienced manager, 290
 severance contracts and renegotiation, 303
 and unique Bayes equilibrium, 301
 unskilled worker, 291
 up-or-out employment rules, 290
 verifiable output employment contracts, 288
 and wage-severance term contract, 297–299
- Time-sensitive markets
 and bertrand competition
 “constrained-capacity” variation, 105
 time-based competition, 108–109
 competitive equilibrium model, 109–111
 conditions, customer-types, 112
 “constrained-capacity”, 105
 consumers, 105
 customer-types, 112
 description, 105
 faster producer, 111
 firms compete, 105
 lower costs, 111
 model, 106–107
 price and delivery matching, 112
 queueing theory, 105
- Transfer pricing
 budgeting exercise, 53
 vs. budget mechanisms, 61–63
 coordination and budgeting, 54–61
 decentralized organizational units, 54
ex ante participation, 54
 planning and coordination, 53
- Two-sided private information
 concreteness, functional form, 218
 defendant’s expected cost, 220
 defendant’s private estimation, 218
 efficiency, 221–226
 equity, 227–228
 incentive compatibility, 219
 IR constraints, 220
 offers, 218
 plaintiff’s assessed probability, 219

U

- The Ultimatum game
 - and experimental results, 314, 315
 - and offerer behavior, 314
 - and reciprocity-based models, 317
 - and responder behavior, 314–315

V

- Vertical relations
 - distribution channels, 89
 - and interbrand competition
 - differentiated retail service, 91
 - equilibrium margin, 90
 - first-order conditions, 90
 - optimal value proposition, 91
 - price-coordinating level, 91
 - retailer's profit function, 90
 - retail service and price levels, 91–92
 - system profit, 91
 - and intrabrand competition
 - channel coordination and competitive effects, 93
 - competitive effects, 93
 - price and service level, 92

- retailer's profit function, 92
- system profit, 92–93
- manufacturers and retailers, 90
- nonlinear tariffs, 90
- value chain, 90

- Vickrey auctions
 - ascending, 347
 - combinatorial, 354–355
 - efficiency, 346
 - multi-unit, 346
 - sealed-bid, 346
 - and uniform-price auction, 344, 346

W

- Wage-severance contracts
 - ex ante* acceptability, faculty member, 298
 - severance payment, 297–298
- The Winner's Curse
 - avoidance, 340
 - bidding, off-shore oil lease, 338
 - English auctions, 342
 - pervasive, 339, 340
 - sealed-bid auctions, 340
 - winning bidders, 342
