

Subject index

Absorption

- coefficient, 549
- free carriers, 476
- spectra, 226, 235, 317, 320, 405, 407, 409, 423, 445, 479, 527

A.c impedance spectroscopy

- Li⁺-ion conducting glasses, 261, 326
- semiconductors, 527
- technique, 255, 325

Activation energy

- electronic conductivity, 526, 530, 567
- ionic conductivity, 131, 135, 140, 144, 149, 157, 171, 173, 199, 201, 215, 221, 228, 236, 239, 240, 241

Amorphous

- cathodes, 513
- ionic-conductors, 183

Anode materials

- microbatteries, 613
- rocking-chair batteries, 397, 608

Attempt frequency, 115

Basicity, 220

Batteries

- basic concepts, 3, 288, 370
- classification, 9, 580, 581
- copper, 606
- lithium, 470, 594, 602, 608
- lithium chloride, 589
- lithium iodide, 594
- lithium-iron-sulphide, 587
- primary, 580, 594
- secondary, 470, 581, 596, 613
- silver, 604
- sodium, 584

Beta-alumina, 160, 164, 585

Brillouin zone, 380, 381, 420, 448

Brownian motion, 107

Butler-Volmer equation, 373, 615

Carbon

- electrodes, 378, 388, 393, 603, 610

- diffusion of Li^+ in, 392, 393, 397

Cathodes

- Li intercalation, 375, 398, 425, 431, 439, 450

Charge transfer, 24, 422, 433, 456, 451

Chemical potential, 18

Chevrel phases, 469, 607

Chromium compounds, 522

Cobalt compounds, 478

Cointercalation, 390

Composite

- cathodes, 491

- electrolytes, 170

Conductivity *see* Electronic, Ionic

- dependence frequency of, 110, 271, 322, 328

Copper

- cells, 606

- ion-conductors, 142, 216

Damping constant, 422, 424, 462

Defects, 120, 208

Density-of-states, 395, 403, 407, 409, 414, 423, 433, 439, 481

Dielectric function

- in fast-ionic-conductors, 321

- in semiconductors, 414

Diffusion

- coefficient, 28

- ionic, 103

- layered structures (in), 392, 452, 461, 465, 479, 518

- Li-ions, 392, 397, 428, 441, 483, 488, 523, 532, 537, 562, 566, 569

- measurements, 41

- theory, 26, 101

- thin-films (in), 561, 562, 616

Disordered semiconductors, 513

Drude model, 386, 414

Dynamic conductivity, 110, 322

Effective charge, 128

Effective mass, 421

Electrical modulus, 330

Electrochromics, 569

Electrode materials

- amorphous, 513

- crystalline, 369, 388, 398, 473

- glasses, 524

- process, 3, 12, 370
 - stability, 69
 - thin-films, 52, 64, 533
- Electrolyte,
- amorphous, 183, 285
 - crystalline, 124, 136
 - films, 62, 285
 - stability, 65, 69
- Electronic
- band structure, 53, 380, 412, 449, 457, 458
 - conduction, 57, 81, 84, 85, 383, 411, 453, 478, 530, 551, 567, 571
 - transitions, 461
- Electrochemical
- capacity, 5, 444, 495
 - cell, 2, 13
 - cycling, 495, 609, 610
 - equivalent, 5
 - insertion process, 12, 370
 - potential spectroscopy, 31, 426, 432, 440
 - properties, 360
 - techniques, 31, 39
- Energy density, 7, 363, 376, 468, 470, 493, 498, 585, 610
- Energy gap, 53, 83, 404, 450
- Equation of motion, 103, 108
- Evaporation techniques
- flash, 75, 305, 315
 - MBE, 77, 294
 - RF-sputtering, 79, 297, 314, 534
- Excitonic transition, 405, 456
- Eyring regime, 112
- Far-infrared, 164
- Fermi surface, 406, 420
- Fick equation, 26
- Fluorite structures, 125
- Four-volts cathodes, 478
- Free energy, 15, 120
- Glass,
- dielectric function, 320
 - electronic-conducting, 524
 - fast-ionic-conducting, 196, 212
 - formation-domain, 184, 229
 - IR spectroscopy, 251, 254, 317
 - oxide-based, 227, 244, 300, 315
 - Raman scattering of, 245, 249, 251, 252

structure, 187, 191, 246, 316
sulphide-based, 194, 238

Graphite

band structure, 380
fluorides, 390
intercalation, 388
structure, 379, 390, 395

Hafnium compounds, 411, 468

Hall effect, 385, 418, 454, 462, 572

High-voltage cathode, 482, 478, 617

Hopping model, 113

Incremental capacity, 407, 426, 432, 440, 465, 472

Indium selenide compounds, 447, 459, 544, 614

Infrared

active modes, 246, 317, 354
spectra, 126, 226, 251, 254, 320, 564

Intercalation

Armand's model, 18, 558
Atlung's model, 20
materials, 369, 375
process, 12, 71, 370
reaction, 12, 467, 475, 592, 594, 595, 597

Interface, 65

Ionic conduction

theory, 98, 102, 203, 210
studies, 31, 88, 101
mixed-compounds, 430, 442, 563, 571

Ion-ion interactions, 18, 20, 429, 558

Ion-pair, 356

Jump relaxation, 111, 211, 276

Kramers regime, 113

Langevin equation, 108

Lattice gas model, 16, 117

Layered

chalcogenides, 398, 447
compounds, 375
oxides, 473
structures, 377, 398, 399, 401, 436, 448, 459, 466, 477, 480, 484

Light scattering

optical phonons, 434
spectra, 251, 434

Lisicon, 150

Lithium

cells, 9, 494, 496, 585

ion-conductors, 70, 74, 115, 149, 166, 171, 197, 277

intercalation, 422, 433, 452, 467, 471

thin-films, 613

Luminescence, 456

Manganese compounds, 487, 489, 571, 617

Microbatteries, 49, 288, 612, 617

Mixed-alkali effect, 224

Mixed-anion effect, 225

Mobility

electronic, 59, 422, 454, 553

ionic, 109

Molecular-beam epitaxy, 77, 296, 545

Molybdenum compounds, 431, 474, 489, 515, 519, 538, 563

Nasicon, 153, 155, 159

Neobium compounds, 468

Nernst equation, 3, 21

Nickel-cadmium cell, 11, 600

Nickel compounds, 478

NMR, 115, 247

Non-transition-metal compounds, 447

Optical

absorption, 317, 445

band gap, 53, 57, 450, 550

properties, 127

spectroscopy, 456, 469, 479, 550

Oxide compounds, 483, 485, 487, 524, 563

Oxygen-ion conductors, 134

Petritz model, 551

Phonon-plasmon coupling, 459

Plasma frequency, 164, 386, 416, 421, 462

Plasticizer, 361

Polaron, 528

Polymer

conductivity, 351

cross-linked, 351

electrolytes, 347

lithium-batteries, 363, 589

structure, 347

Potential barrier, 113, 555

Primary batteries, 9, 580, 594

Raman spectroscopy, *see also*, Light scattering

active-modes, 190, 355

spectra, 86, 165, 243, 245, 249, 251, 252, 434, 446, 548

Reflectivity, 126, 243, 245, 251, 254, 284, 415, 421

Relaxation time, 276

Rigid-band model, 25

Rocking-chair batteries, 608

Secondary batteries, 9, 470, 579, 581, 596, 612

Semiconductor, 57, 524

Silver

cells, 604

ion-conductors, 87, 136, 171, 212

Sodium

cells, 9, 581, 584, 589

ion-conductors, 153, 196, 221

Solid-state batteries, 3, 579

Spinel oxides, 487

Staging, 383

Strong-electrolyte model, 203

Superlattice formation, 35

Tantalum compounds, 405, 465

Titanium compounds, 376, 399, 404, 412, 465, 492, 533

Thermal annealing, 83, 265

Thermodynamic factor, 28, 429, 441, 452, 465, 479, 517, 561

Thin-film

cells, 49, 612, 617

characterization, 533

ionic-conductors, 86, 298, 302, 306

lithium, 612

process, 74

semiconductors, 81, 513

structure, 52, 315, 533

Transition-metal

dichalcogenides, 398, 405, 408, 411, 412, 431, 533

oxides, 524, 563

trichalcogenides, 435, 465, 519, 520

Transport number, 359

Tungsten bronzes, 490, 521, 569

Two-phase insertion reaction, 38

Vanadium compounds

crystalline, 483

- glassy, 520, 523, 526
- oxides, 483, 485
- sulphides, 520
- thin-films, 570, 566, 617
- Vibrational modes
 - assignments, 317, 354, 355
 - of intercalant species, 433
- Vogel-Tamman-Fulcher equation, 356
- Voltammetry
 - studies, 48, 361, 516, 559, 560
 - technique, 43
- Weak-electrolyte theory, 206
- Weak localization, 387, 454
- X-ray
 - crystal diffraction, 515, 546, 564
 - photoelectron spectroscopy, 315, 543, 549
- Zirconium compounds, 404, 408, 465
