- Acid–base equilibria of water in melts,  
table of equilibrium constant values,  
314
- Acidity of metal aquo complexes, 132
- Acidobasicity of water in molten salts, 311
- Acids in dilute solution,  $pK$  values, 130
- Activities of components of Dead Sea  
water, 99, 100
- AgCl/Ag<sub>2</sub>S mixtures—collected thermo-  
dynamic data, 380
- Alkali metal oxides in melts, thermody-  
namic data, 199
- Aluminum halide–alkali metal halide mol-  
ten salt systems  
acid–base chemistry, 408  
electrochemistry of elemental and disso-  
ciated chalcogens, 410  
species characterization, 409  
stability of organic radical ions, 411
- Anion basicity, 128
- Anionic hydration, 11  
scattering length and sample parameters,  
12
- Aqueous cesium chloride, computer simu-  
lation, 49, 50
- Aqueous glasses  
CaZnCl<sub>4</sub> solutions, 22, 23  
nitrate-bound water, 25
- Basicity moderating parameter,  $\gamma$ , 129
- Behavior of chalcogenides in chloroalumi-  
nates, 366
- Binary molten salt mixture, schematic  
representation, 153
- Cation-bound water in hydrate melts,  
relaxation rates, 16
- Cation-bound water in the glassy state,  
reason for dielectric activity, 22
- Cationic hydration, 8  
parameters obtained from neutron dif-  
fraction, 10  
scattering length and sample parameters,  
9
- Charge-transfer-to-solvent electrochemical  
and spectral correlations, 92
- Charge-transfer-to-solvent spectra  
comparison of models for  $E_{\max}$  predic-  
tion, 83  
concept, 80  
Coulombic interaction components, 89  
and Coulombic interactions, 85  
effect of electrolytes, 84  
expanded lattice models (of electrolyte  
solutions), 86  
interionic distances, 88  
maximum absorption energies, other  
models, 83  
“polaron” model, 81  
quantitative treatment, 81  
Smith–Symons “confined” model, 82  
Stein–Treinin “diffuse” model, 82  
temperature dependence of  $E_{\max}$ , linear-  
ity, 91  
variation with concentration, 86

- Charge-transfer-to-solvent spectral shifts
  - activity coefficient correlation, 90
  - thermodynamic correlations, 94
- Chloride ion hydration, 13
- Classification of molten salts, 151
- Comparison of calculated and experimental molalities: sodium chloride in equilibrium with halite and potassium chloride in equilibrium with carnallite, 107
- Comparison of polysulfides in melts
  - effect of basicity, 402
  - electrochemistry, 403
  - stability, 403
- Comparison of Tl, Ag, Pb, Cu results (halide-chalcogenide melts), 376, 379
- Competitive polarization in melts, 426, 427, 431
- Complex ions in melts, 5
- Computer simulation: interfaces, 51
- Computer simulation techniques
  - molecular dynamics, polarization, 36, 40
