

Index

A

ADA, *see* adenosine deaminase
adenocarcinoma, 139, 157
adenosine deaminase (ADA), 125
AIDS, 75, 120, 143
allele, 86, 89, 106
allelotype, 140
amino acids, 3, 4
amniocentesis, 104
aneuploid, 58
antibodies, surface, 113
antigens, cell surface, 112
anti-oncogenes, 136
anti-sense oligonucleotides, 23, 81
aplastic anemia, 166
atherosclerosis, 105
autoradiograph, 31, 102
AZT, 79, 120

B

bcl-2, 144
bcr, *see* breakpoint cluster region
blood cells, 111, 119
blood type, 89
bone marrow, 111, 123
 transplantation, 121
breakpoint cluster region (*bcr*), 150

C

cancer, 126, 129, 133
 breast, 58, 155
 cervix, 157
 colon, 138
 lung, 156

 risk, 167
 squamous-cell, 163
 thyroid, 156, 167
carcinogens, 138, 169
carrier, 87, 99, 100
CD (cluster designation), 113
CD4, 79
cell
 division, 17, 52, 54
 surface receptor, 21
centiMorgan, 8, 91, 96
CFU, 111, 117
chemiluminescence, 67, 71
Chlamydia, 71, 73
cholesterol, 87, 105
chorionic villus biopsy, 99
chromosome, 8, 53
 Philadelphia, 150
 translocation, 131
X, 89, 95
Y, 89
#2, 115
#7, 96
#8, 131, 143
#9, 149
#14, 115, 143
#17, 140
#18, 140, 144
#21, 53
#22, 115, 149
cloning, 25, 43
cluster designation, *see* CD
c-myc, 7, 23, 35, 134, 143
codon, 3, 22, 46
crossing over, 90, 91
CSF (colony stimulating factor), 120

cystic fibrosis, 25, 96, 98
 cytology, 140, 157
 cytometry, 51
 flow, 56, 156
 image, 59

D

DNA (deoxyribonucleic acid), 3
 automation, 82
 complementary, 19, 23
 damage, 129, 140, 165, 169, 171
 extraction, 147
 fingerprinting, 92, 122
 hybridization, 33, 39, 70
 index, 52
 melting, 17, 38
 mitochondrial, 107
 physical organization, 13
 polymerase, 19, 38
 repair system, 130, 132, 138, 140
 replication, 17, 20
 sequencing, 11, 98
 viral, 63, 72
 dot blots, 33
 diploid, 51

E

EBV (Epstein Barr virus), 36, 142
 ELISA, 79
 encephalitis, 65
 environmental pathogen, 163, 165, 169
 Epstein Barr virus, *see* EBV
 erythropoietin (EPO), 119, 120
Escherichia coli, 64, 80
 exon, 8

F

false negatives, 103
 false positives, 79, 103
 familial hypercholesterolemia, 87, 105
 fetus, 91, 99, 104
 forensic medicine, 92

G

gastroenteritis, 80
 Gaucher s disease, 122

gene, 3, 86, 89
 abl, 151, 152
 BCR, 150, 152
 brca1, 155
 cloning, 25, 43
 cystic fibrosis, 96
 DCC (deleted in colon cancer), 140
 deletion, 130
 expression, 17, 21, 23
 factor VIII, 95
 fusion, 152
 immunoglobulin, 115
 LDL receptor, 105
 myeloperoxidase, 31, 47
 p53, 136, 137, 155
 rearrangement, 115, 131
 retinoblastoma, 136
 structure, 7
 therapy, 49
 transplant, 124
 genetic code, 6, 7
 genetic counseling, 99
 genetic diseases, 85
 genetic engineering, 43, 47, 81, 123
 genetic mapping, 13, 85
 genetic message, 3, 4
 genome, 85, 92, 115, 132
 human, 14, 27, 124
 project, 14
 genotype, 88, 92
 gonorrhea, *see* *Neisseria*
 goiter, 157
 G proteins, 133, 157
 gray (Gy), 158
 growth factors, 112, 119, 132,
 140

H

haploid, 91
 heavy metals, 158
 hemoglobin, 49, 90, 100, 122
 A, 100, 124
 C, 100
 S, 90, 100, 123
 hemophilia, 94
 HER-2/*neu*, 155
 herpes simplex virus, *see* HSV
 heterozygous, 87
 histones, 13

HIV, 34, 41, 75
 antibodies, 79
 homozygous, 86
 HPV (human papilloma virus), 157
 HSV (herpes simplex virus), 72, 81
 human immunodeficiency virus, *see*
 HIV
 human papilloma virus, *see* HPV
 hybridization, 33, 39, 65, 159
 in-situ, 33, 36

I

IL-1, 120
 IL-2, 120
 immunoglobulin, 114, 117, 143,
 144
 interferon, 119, 152
 intron, 8

K

karyotype, 53

L

LDL receptor, 105
 leukemia, 122, 140, 173
 acute promyelocytic, 153
 chronic myeloid, 149
 linkage, 91, 95
 disequilibrium, 97
 locus, 87
 lymphocytes, 58, 112, 131
 B, 113, 142
 T, 113, 116, 142, 147
 lymphoma, 55, 116, 121, 140, 144,
 147

M

malaria, 74, 142
 meiosis, 90
 metastasis, 129, 140
 mitochondrial Eve, 107
 mRNA, *see* RNA, messenger
 mutation, 81, 98, 101, 130, 170
 mycobacteria, 71, 72
 myeloperoxidase, 31, 47
 myocardial infarction, 105

N

Neisseria, 70
 Northern blot, 32

O

oncogenes, 129, 132, 135, 155, 171

P

Pap smear, 157
 parvovirus, 73
 PCR (polymerase chain reaction), 38,
 66,
 73, 78, 94, 99, 140, 144, 147, 156
 phenotype, 89
 plasmid, 25, 46
Plasmodium, *seemalaria*
 polymerase chain reaction, *see* PCR
 polymorphism, 87, 91
 polyp, 139, 140
 prenatal diagnosis, 103
 primers, 38
 probes, 65, 80, 117, 122, 140, 145, 148
 cold labeled, 37, 67
 enzyme labeled, 159
 labeling, 37
 radioactive, 37
 promoter, 8, 23

R

radiation, 164, 167
 reading frame, 12
 restriction endonuclease, 27, 43, 92
 restriction-fragment-length-
 polymorphism
 (RFLP), 91, 93
 retinoblastoma, 138
 retrovirus, 75
 reverse transcriptase, 45, 75
 RFLP, *see* restriction-fragment-length
 polymorphism
Rhinovirus, 64
 RNA
 messenger, 3, 4, 22, 32, 151
 ribosomal, 67
 transcription, 22, 115
 transfer, 25
 viral, 76, 78

S

Salmonella, 66, 80, 171
SCID (severe combined immune deficiency),
 122, 125
sickle cell anemia, 90, 100, 120, 123
sievert (Sv), 164
slot blot, 33
Southern blot, 29, 101, 116, 118, 140,
 145, 153
sperm, 107
stem cell, 111
stringency, 67

T

TATAA box, 9, 23
Tay-Sachs disease, 88
thalassemia, 90, 122
thermal cycler, 41
thymus, 114
TNF, *see* tumor necrosis factor
transgenic animals, 48
transient erythroblastopenia of childhood
 (TEC), 74
tRNA, *see* RNA, transfer

Trypanosoma brucei, 81
tumor necrosis factor (TNF), 120
tumor suppressor gene, *see* anti-oncogenes
tyrosine kinase, 132, 151

V

vaccines, 79
variable number of tandem repeats
 (VNTR), 92
VDJ, 107
vectors, 24
viral protein, 77
viruses, 132, 142
vitamin A, 154
VNTR, *see* variable number of tandem repeats

W

Western blot, 32, 33, 79

X

xeroderma pigmentosa, 132
X-ray, 164
