Index

A

Adafruit, 5
Analog ports, 74
Analog to digital converter (ADC), 142
Application Programming Interface (API), 142
ArduiBox, 17
  accessories/components, 86
  ArduiBox enclosure, 102, 104–105
  Arduino DC barrel jack, 100
  Arduino pins, 96
  building circuit, 98
  DIN rails, 105
  Grove Base Shield, 85
  hook-up wires, 97
  K9 Terminal, 100
  PCB track connection, 96
  2-pin terminal blocks, 88
  3-pin terminal blocks, 88
  power supply, 86–87, 100
  prototyping area, 98
  prototyping plate, 88
  soldering
    areas, 89
    female headers, 92, 94
    male headers, 90–91
    pads, 97
    reset button, 94–95
  temperature sensor and fan, 96–97, 105–106
  terminal blocks, 90
  testing, 107
  USB power, 100
  voltage regulator, 86–87
Arduino at heart, 59
  Controllino, 64
    MAXI, 65–66
    MEGA, 66–67
    MINI, 64–65
  industrial shields, 62–64
  Industruino, 59
    Industrial I/O Kit, 61
    protoboard, 61
    Proto Kit, 60
    topboard, 60
Arduino-based PLCs, 165
Arduino DC Barrel Jack, 100
Arduino development environment, 2
Arduino Ethernet shield, 7, 8, 23, 27
  connecting together, 29, 31
    IP address, 32
    MAC address, 31–32
  sketches, writing
    simple web client, 48–50, 52
Arduino Ethernet shield 2, 7–8, 27–29
Arduino MEGA, 65–66
Arduino Relay shields, 164
Arduino 4 Relays shield, 170–173
Arduino software, 23, 33, 109–110
  Arduino Ethernet2 library, 35–36
  basic configurations, 37–38
  cables, 36–37
  download, 33
  libraries folder, 35
  using Arduino IDE, 34
Arduino UNO, 23, 64, 68
  bootloader, 23
  cable and power supply, 5
  clones and derived boards, 6
  Ethernet2 library, 22

P. Seneviratne, *Building Arduino PLCs*, DOI 10.1007/978-1-4842-2632-2

Arduino UNO (*cont.*)
and Genuino, 3, 23
analog pins, 25
components, 24
digital pins, 24
powering, 25–27
Multiprotocol Radio Shield, 18
plcLib, 21
4 relays shield, 15
Rev3 board, 3–4
RS485/Modbus Module, 19
sketches, writing, 38
bare minimum code, 38–40
blinking, 40–42
fading, 43–44
Hello World, 40
reading analog inputs, 44–47
software, 20–21
WiFi shield, 9, 22
Arduino WiFi shield, 23, 32–33
sketches, writing, 52–55
ATmega AT90USB1286 microcontroller, 60
ATmega328P microcontroller, 23
Atmel ATmega328, 64
Atmel ATmega2560, 65–66

B

Bare minimum code, 38–40
Barrel jack, 7
BEEP, 81
Bootloader, 2
Bottle filling process, 57
Bottom shell, 102

C

Cloud PLC, 139–140
Connector D4, 80
Controllino, 64
MAXI, 65–66
MEGA, 66–67
MINI, 64–65

D

DC motor driver circuit, 99
Digital computer, 1
Digital ports, 74
DIN rail, 1, 105

E, F

Embedded software, 77
Ethernet PLCs, 63
External power source, 79

G, H

General Purpose Input Output (GPIO), 142
Genuino, Arduino UNO and, 3–5, 23
analog pins, 25
components, 24
digital pins, 24
power
USB power, 25
9V AC/DC adapter, 25–26
9V battery pack, 26
VIN pin, 27
GitHub, 21
Grove
base shield, 9–10, 68–70, 77, 85, 105
button, 10–11, 78–79
cables, 15, 78, 80
components, 10
connectors, 73
infrared reflective sensor, 14
LED, 11, 78
relay, 12–13
speaker, 13–14
temperature sensor, 13

I

I2C ports, 75
IFTTT (www.ifttt.com) DIY light platform, 153
creating recipe, 154–164
trigger commands, 163
Industrial Shields, 62–64
Industruino, 59
Industrial I/O Kit, 61
Protoboard, 61
Proto Kit, 60
topboard, 60
Infrared sensor, 58
Integrated Development Environment (IDE), 33
IP address, 32

J

Jumper J3, 101

K

K9 terminal block, 100–101

L

LED, 81
Light up, 81

M

Media Access Control (MAC) address, 31–32
Microcontroller unit (MCU), 142
Modbus
  Arduino PLC, 127
  communication protocol, 138
  master-slave architecture, 127
  Multiprotocol RadioShield (*see* Multiprotocol Radio Shield)
  PLC with, 131
    Arduino sketch, 135–138
    hardware setup, 131–135
  RS485, 127
  RS485 library for Arduino, 130
  RS485/Modbus module, 127
  RS485/Modbus module for Arduino and Raspberry Pi, 129–130
  RTU protocol, 133–134
Momentary push button, 77, 81
Multiple relay boards, 169
Multiprotocol Radio Shield, 18, 129, 131
  Cooking Hacks, 127
  digital switch, 129
  sockets, 128
  wire-wrap headers, 129

N

National Electrical Manufacturers Association (NEMA), 59
NearAPI, 139
NearBus cloud connector, 138–140
  controlling Grove LED, 150–153
  defining new device, 140–143
  IFTTT DIY light platform, 153
    creating recipe, 154–164
    trigger commands, 163
  library for Arduino, downloading, 143
  signing up, 140
  uploading sketch, 144–150

O

220 Ohm resistor, 76
On-board potentiometer, 81
Onboard voltage regulator, 76
Open-source PLC, 64

P, Q

2-pin terminal block, 100
plcLib Library, 21
  Arduino, 109–110
  boolean operations, 122
  boolean OR, 122–124
  default hardware configuration, 110
  fixed-duration pulse output, 121–122
  inverted single bit input
    equivalent relay circuit, 117
    PLC Ladder Logic, 118
    relay ladder logic diagram, 118
    switch circuit, 116
    truth table, 116
  inverted single bit output
    outNot() function, 119
    truth table, 119
  ladder logic, 111
  single bit input, 112–114, 116
  time delays, 120
  timerOff() function delays, 120–121
  turn on delay, 120
Power indicator, 72
Power supply, 100
Power switch, 71–72
Programmable Logic Controller (PLC)
  actuators (output devices), 58
  Arduino ARDBOX 20 I/Os Analog 7.0, 62
  Arduino at heart, 59
    Controllino, 64–67
    Industrial Shields, 62–64
    Industruino, 59–61
  Arduino UNO board, 2
  Arduino WiFi shield, 9

Programmable Logic Controller (PLC) (*cont.*)
bottle filling process, 57
cloud, 139–140
conveyor, 57
definition, 58
digital computer, 1
DIN rail, 1
Ethernet, 63
filling stroke, 57
Grove
base shield, 9–10
button, 10–11
LED, 11
speaker, 13–14
heart of, 58
infrared sensor, 58
with Modbus
Arduino sketch, 135–138
hardware setup, 131–135
modules, 2
nozzle, 57
open-source, 64
output signals, 58
parts and accessories, 59
relay shield, 15
sensors and actuators, 57
Proximity sensor, 58
Pulse width modulation, 24

R

Raspberry Pi, 19
Relay boards
multiple, 169
single, 166–167
Arduino digital pin 13, 167
Arduino GND pin, 167
Arduino sketch, 168
Arduino 5V pin, 167
male headers, 165–166
terminal blocks, 165–166
testing, 169
Relay shields, 15–16, 170
Arduino 4, 171–173
driving high-power AC loads, 173–176
driving high-power DC loads, 170–171
relay channels, adding, 177–178
testing, 173, 177
Reset button, 73, 82–83
RS232 and RS485, 127
RS485 library for Arduino, 130
RS485/Modbus module, 19, 22, 127, 131
RS485/Modbus module for Arduino and Raspberry Pi, 129–130

S

Seeedstudio relay shield, 16
Seeeduino Relay Shield, 164, 173–178
Seeeduino v4.2, 6
Self-adhesive breadbaord, 98
Serial Peripheral Interface (SPI), 128
Single relay board, 164, 166–167
Arduino digital pin 13, 167
Arduino GND pin, 167
Arduino sketch, 168
Arduino 5V pin, 167
male headers, 165–166
terminal blocks, 165–166
Sketches
Arduino Ethernet shield, 48–50, 52
Arduino WiFi shield, 52–55
SparkFun, 5
SparkFun RedBoard, 6–7
Speaker, 81

T

Temperature sensor, 132
Test cases, 79
Testing audio, 81
TIP120
transistor, 99
pin layout, 100
TMP36 temperature sensor, 98
Top shell, 104
TQS3-I Modbus RS485 interior thermometer, 19–20, 132
Troubleshooting, 80

U

Universal Asynchronous Receiver/Transmitter (UART), 75, 128
USB
cable, 5
power, 100
type A/B cable, 79

V

5V based devices, 165
9-12V DC power supply, 101
15-30V DC power supply, 101
Virtual Microcontroller Unit (VMCU), 142
Voltage regulator assembly, 102

W, X, Y, Z

Wago terminal blocks, 132–133
Wall wart, 25–26
WiFi shield, 22
Wiznet W5100, 8
