

Index

A

Ab initio, 8, 186, 188, 190
Absorbing state, 44, 357, 363
ACG simulation algorithm, 343
Action functional, 18, 19, 21–23, 35, 38, 52
Active learning, 187
Additive noise, 26–27, 29–32, 53
Adjacency matrix, 251, 325, 326, 328
Adjoint-symmetry, 124, 169, 170, 172, 180, 181
Adjoint-symmetry determining equation/system, 170, 172
Advanced materials, 9, 247, 257
Affine diffusion processes, 267, 270–273
Agri-science, 247, 255–256
Alan Turing Institute (ATI), 254
Allen-Cahn equation, 30
Alloy Theoretic Automated Toolkit (ATAT), 187
Angular momentum conservation, 156
Arbitrary Lagrangian-Eulerian, 8, 222
Arc-length parametrization, 28
Assortative configuration graph algorithm, 343–345
Assortativity, 324, 328
Asymptotic stability, 6, 62, 78, 80–83
Attractor, 350, 351, 358, 360, 362–365, 374
 positive, 358–364, 379

B

Banking network, 324
Barotropic compressible inviscid fluid equations, 126, 127, 156

Barotropic gas flow equations, 126, 156
Barotropic vorticity equation, 42
Basis function, 9, 93, 191, 215, 217, 225, 229, 267, 277, 281–284, 286–288, 293, 294, 299
Bay checkerspot butterflies, 11, 369
Bayesian approach, 192
Bayesian global optimization (BGO), 188, 200
Bayes' rule, 194
BDFk/EXTk, 216, 218, 232, 233, 235
Bifurcation methods, 63, 69–78, 83, 85
Big data, 9, 247–255, 259
Birth-death process, 47
Black-Scholes Hull-White model, 267, 271–272
Boost momentum conservation, 156
Boost symmetry, 127, 136, 164
Boundary conservation law, 121, 127, 130, 153, 154
Brent–Dekker method, 191
Broyden–Fletcher–Goldfarb–Shannon, 191
Burgers-Huxley model, 39–40

C

Cahn-Hilliard equation, 18, 33–39
Camassa-Holm equation, 126
Canonical conditions, 307, 310–314, 319
Cascade mapping, 10, 338
Cauchy-Kovalevskaya form, 122, 123, 134, 135, 180

- (\mathbb{F}, \mathbb{G}) -CDMC, 193
 Characteristic
 equation, 147, 149, 152–154, 157–159, 170, 171, 174, 175, 177
 form, 123, 138, 139, 143, 145–159, 164, 165, 168, 174, 175
 function, 64, 130, 131, 135, 145, 164, 167, 168, 171, 175, 178, 180, 270, 295, 312, 426–428
 Charge source equation, 128
 Charney-DeVore model, 41–44
 Chemical reaction network, 47
 Climate regimes, 17, 40–44
 Clipping, 328, 343, 344
 Cluster, 8, 186, 187, 191–195, 201, 252, 253, 276, 278, 283–285
 Cluster expansion (CE), 186, 187, 191–192
 (\mathbb{F}, \mathbb{G}) -CMC, 191
 CMCs. *See* Conditional Markov chains (CMCs)
 Coexistence, 10, 11, 349–381
 Coherent states, 6, 59–85
 Competing gradient flows, 35
 Compressible viscous fluid equations, 125
 Computational model, 3–12
 Computation of multipliers, 169–179
 Computation of symmetries, 170
 Concentration compactness, 66, 74, 84
 Conditionally independent Markov copula, 304, 320
 Conditionally independent multivariate Markov coupling, 10
 Conditionally independent strong CMC copula, 309–320
 Conditional Markov chains (CMCs), 10, 303–320
 Conditional transition probability matrix field (c-transition field), 306, 316–318
 Conductor, 11, 260, 387–389, 391–393, 397–388
 Configuration, 10, 33, 36–38, 44–46, 186, 189–193, 196, 197, 199, 201, 202, 204, 236, 237, 240, 323–345, 366
 Configuration-energy couple, 192, 193
 Configuration graph, 323–345
 Configuration space, 186
 Conjugate momentum, 48
 Conserved current, 129, 137, 138, 146–148, 151, 152, 154, 155, 157–159, 165, 169–179
 Conserved density, 7, 120, 121, 129, 138, 148, 149, 152–155, 170, 175, 176
 Conserved integral, 7, 120, 122–124, 128–138, 160, 170–172, 180
 Constrained optimization problem, 24, 25
 Contagion, 10, 324
 Continued fractions, 406
 Continuity equation, 7, 120–122, 137, 138
 Convergence in probability, 360
 Cooperation, 12, 419–434
 Core, 12, 188, 240, 290, 410, 427, 428, 430, 432–434
 Correlation functions, 186, 191
 Cost-accuracy trade-off, 204
 Cosymmetry, 168
 Counterparty credit risk, 267
 Covariants, 390, 391, 393
 Credit exposure, 266
 Credit value adjustment (CVA), 265–276, 285–288, 290–294
 Cubic forms, 389–396, 398–400, 402, 403, 411, 412
 CVODE, 221, 223, 224
- D**
 Data acquisition policy, 187, 195, 197, 199–201
 Degrees of freedom (DOF), 45, 51, 95, 96, 101, 102, 107, 109, 113, 215, 234, 242, 250
 Demographic noise, 10, 350–364, 366, 369, 377, 379–381
 Demographic stochasticity, 350–364, 377, 380
 Density functional theory (DFT), 8, 186, 190, 207
 Design matrix, 192
 Design of (computer) experiments, 187, 202, 203
 Detailed balance, 18, 29, 32–34, 40
 Differential identity, 130, 145, 151, 154, 155, 166
 Diffusion equation, 19, 125, 155
 Direct estimator, 281, 286, 287, 289, 290
 Disassortative, 323
 Discriminant, 388–391, 393–413
 Doubly stochastic Markov chain (DSMC), 306, 307, 309, 316–318
 (\mathbb{F}, \mathbb{G}) -DSMC, 306, 316–204
 Dynamical system, 5, 7, 17–53, 81, 123, 261, 355, 365
 random perturbation of, 356–358, 365
 Dynamic games, 12, 419–434
 Dynamic games played over event trees, 12, 419–434

E

Ecological networks, 252
 Edge type, 324–326, 328–330, 336, 339, 343, 344
 distribution, 326, 333
 Effective cluster interactions, 187, 192–195
 Egger's model, 41, 42
 Eight great technologies, 246–248, 261
 Ekman damping, 42
 Electric (displacement) field equation, 127
 Electric field line conservation, 128
 Elliptic curve(s), 11, 387–388
 Embedded-atom method (EAM), 186, 190–191, 199, 201, 202, 204
 Empirical measure, 366
 Energy conservation, 155, 156
 Energy-momentum conservation, 156
 Energy storage, 259
 Engineering and Physical Sciences Research Council (EPSRC), 254
 Engineering/regenerating, 255
 Enstrophy conservation, 156
 Environmental stochasticity, 10, 350, 351, 364–381
 Epistemic, 188
 Equations of motion, 20, 26
 Ergodic, 365, 366, 368, 372–379
 Euler equations, 114, 133, 134, 152
 Euler-Lagrange equation, 23, 63, 164
 Euler operator, 138, 140, 141, 161, 164
 Evidence approximation, 194
 Expectation-maximization algorithm, 194
 Expected exposure (EE), 266, 267, 270, 273, 276, 279–281, 285–290, 292
 Expected improvement (EI), 8, 188, 195–197, 202, 206
 Explicit construction, 104–105
 Exploration/exploitation trade-off, 188
 Exponential time differencing, 31
 Extinction
 mean time to, 358, 360
 probability, 361

F

Fcc unit cell, 191, 199
 Financial
 network, 10, 323, 324, 326, 338, 345
 stability, 324
 systemic risk, 10
 Finite element methods, 89, 93–96
 F-intensity, 269, 305, 307, 308
 Fluid incompressibility equation, 128

Fluid-structure interaction (FSI), 214, 231–234, 242
 Formation energy, 195
 Frechet adjoint derivative, 138, 139, 141, 167
 Frechet derivative, 60

G

Galerkin scheme, 94, 111
 Galilean energy conservation, 138
 Galilean momentum conservation, 156
 Gauge multiplier, 123, 152–154, 166
 Gauge symmetry, 166
 Gaussian approximation, 195, 353
 Gaussian process regression (GPR), 188, 201
 Genomics and synthetic biology, 254–255
 Geometric action functional, 18, 22
 Geometric minimum action method, 18, 23–24, 52
 Gibbs free energy, 190
 gKdV equation, 133, 135, 137, 157, 161, 162, 164, 172, 173, 175–177, 179
 Global conservation law, 129
 Gradient system, 32
 Graph
 directed graph, 323–325, 328
 undirected graph, 324, 325
 Grosswetterlagen, 40
 Ground state line (GSL), 8, 185–207
 Ground states, 63, 66–70, 72, 74–77, 85, 187, 198–204
 Ground truth, 189, 190, 201

H

Hadamard's lemma, 144
 Hall's conjecture, 413
 Hamiltonian, 6, 7, 18, 20, 21, 23, 26–29, 48–53, 60–62, 77, 126, 156, 254
 Hamiltonian for additive noise, 53
 Hamiltonian formulation, 6, 60–62
 Hamiltonian for multiplicative noise, 27–28
 Hamilton-Jacobi operator, 48
 Heat conduction equation, 125, 155
 Heat conservation, 155
 Helicity conservation, 156
 Helmholtz conditions, 161, 167, 169
 Heston Hull-White model, 272–273, 288
 Heston model, 271–272, 284–288, 292–295
 Heteroclinic orbit, 29, 33–38, 40, 41, 47, 49, 52
 H1HW model, 272–273, 288, 296–298
 Higher-derivative conserved quantity, 61, 63
 Higher-order conservation law, 125

Higher-order symmetry, 135, 136
 Homotopy integral formula, 154, 155, 161, 170
 Hyperbolic problems, 5–6
 Hyper-parameter, 192

I

Improvement, 8, 187, 188, 195–197, 199–202, 206, 256, 396
 Imputation distribution procedure, 426, 430, 431, 433, 434
 In-degree, 325–327
 Independence strong copula for CMCs, 311
 Independent edge condition, 328
 Information networks, 252
 Informative simulation, 8, 195, 206
 Initial pool, 197, 205, 206
 In-stub, 328, 329, 344
 Intensity of an (\mathbb{F}, \mathbb{G}) -DSMC, 192
 Internet penetration, 249
 Invariant
 distribution, 21, 357
 theory, 388, 389
 Inviscid fluid equation, 126
 Ising model, 18, 44–47

J

Jet space, 123, 128, 131, 132, 138, 139, 141, 143–145, 147, 157, 177, 178
 Jump filtering, 108–111

K

Kronecker sum, 311
 Kuroshio oceanic current, 40

L

λ , 198
 Lagrange multiplier, 25, 26, 28
 Lagrangian, 7, 8, 20, 21, 124, 160–165, 167, 168, 180, 214, 222, 227
 Laplace asymptotic method, 333, 335, 345
 Laplace method, 345
 Large deviations, 5, 18, 53
 rate function, 5, 18, 53, 358, 359, 363, 381
 Large deviation theory (LDT), 5, 18–22, 30, 33, 48, 51, 52
 Large graph asymptotics, 328
 Law of large numbers, 50, 333, 334, 336
 Lax-Wendroff scheme, 93
 Leading derivative(s), 123, 132–134, 136, 137, 146, 147, 149, 155–158, 167, 169, 172, 180

Lie symmetries, 131, 135, 164, 165, 170
 Likelihood, 5, 18, 192–194, 266, 269, 370
 Linear forms in logarithms, 387, 405
 Line integral formula, 139, 144, 151
 Local
 conservation law, 129, 155, 160, 165, 166, 168, 169
 equivalence, 130, 147
 Locally tree-like, 324, 338–343
 Locally tree-like independence, 341
 Locally trivial, 129, 130, 138, 146, 148, 151–155, 158, 159, 171, 175, 176, 178, 179
 Log-asymptotic equivalence, 19
 Lotka-Volterra processes, 352, 353, 356, 358, 359, 363, 377
 Low-Mach number formulation, 8, 219–224, 238
 Low-order conservation law, 155–159, 170, 172
 Low-order multiplier, 157, 172, 173, 177, 179
 Lyapunov exponent, 11, 368, 371
 dominant, 368, 371

M

Magnetic field line conservation, 128
 Magnetohydrodynamics equations, 134, 153
 Maier-Stein model, 18, 32–33
 Maps, 109, 187, 188, 190, 217, 227, 228, 356, 363, 365
 Marginal likelihood, 194
 Markov
 chains, 10, 303–320, 350–353, 356, 380
 jump process, 18, 19, 21, 48
 Mass conservation, 155, 156
 Material discovery and design, 188
 Mathematical model, 5–8, 246, 250, 255, 350
 Mean first passage time, 21
 Modified EI, 198
 Modularity theorem, 388
 Momentum conservation, 156
 Monte Carlo (MC), 10, 266, 275, 281, 288–290, 324, 328
 Mordell-Weil rank, 412
 Morse decomposition, 362, 363
 Multigraph, 328, 343
 Multi-objective decision problem, 198
 Multiplicative noise, 18, 27–28, 44
 Multiplier, 7, 25, 26, 28, 122–124, 146–158, 166, 168–181
 determining equation/system, 168
 Myopic, 188

N

National science challenges, 248
 Natural thermodynamic potential, 190
 Navier-Stokes, 6, 114, 214–219, 224, 225, 231, 235, 238, 250
 NiAl, 8, 189–191, 201–204, 206, 207
 Node consistency, 425–434
 Node type distribution, 326, 327, 333, 336
 Noether's theorem, 7, 61, 119–181
 modern form, 119–181
 Non-dispersive wave equation, 127, 156
 Nonlinear Schrödinger equation, 62
 Nonlinear wave equations, 6, 59–85
 Non-quadratic Hamiltonian, 21, 51
 Non-trivial multiplier, 123, 155, 169, 170
 Non-variational PDE (system), 124, 169
 Nose curve, 260
 n -point cluster, 192
 Null-divergence, 138, 141–143
 Numerical
 efficiency, 28–29, 53
 stability, 30, 31

O

Optimal learning, 187
 Orbital stability, 6, 60, 62, 63, 67, 78–81
 Organisational networks, 252
 Out-degree, 325–327
 Out-stub, 328, 329, 344

P

Pareto front, 198, 205–206
 Path of maximum likelihood, 5, 18
 Pattern formation, 33
 Percolation, 10, 324, 329
 theory, 338
 Performance metric, 199
 Phase
 diagrams, 8, 188–190, 206
 separation, 17
 Pitchfork bifurcation, 70, 74, 76
 Point symmetry, 131
 Pool of candidate simulations, 196
 Population persistence, 350, 351, 369, 379
 Porous media equation, 126, 156
 Posterior, 193, 194
 Pre-conditioner, 25, 26
 Predictive mean, 195, 204
 Predictive probability density, 194
 Predictive variance, 195, 198, 204
 Primality testing, 404
 Prior, 187, 192–194, 219, 233, 355, 379, 408
 Probability of improvement, 188

Q

Quantification of the uncertainty, 192
 Quantity of interest (QoI), 188
 Quasi-Newton algorithm, 191
 Quasipotential, 18, 20–23, 52
 Quasi-stationary distribution, 357

R

Radiation damping mechanism, 82
 Random difference equations, 351
 Random dynamical system, 365
 Random graph, 10, 326–327, 338
 Poisson graph, 328
 Random graph simulation, 330
 Reaction-diffusion equation, 19
 Reducible forms, 394, 396–397, 399, 407
 Reduction theory, 388
 Regular PDE (system), 132–138, 145–148, 154–157, 166–169
 Relative GSL error (GSLE), 199–201, 203, 207
 Rellich-Kondrachov theorem, 65
 Residual distribution framework, 102
 Robotic systems, 254
 Rock-paper-scissor dynamics, 378, 380

S

S-adapted Nash equilibrium, 424
 S-adapted strategy, 424
 Saddle point method, 335
 Satellites and space technology, 254
 Scaling formula, 124, 171, 176, 178–180
 Scaling symmetry, 165, 170, 171, 175, 176, 178, 179
 SDE with additive noise, 26–27
 SDE with multiplicative noise, 27
 Separatrix, 34, 36–39, 49
 Shapley value, 12, 422, 427, 429, 431–432, 434
 Simplified geometric minimum action method, 23–24
 Skeleton, 10, 323, 324, 338, 352, 356
 Slow-fast system, 50–53
 Slow manifold, 34–39
 Small random perturbations, 5, 17–53
 Social networks, 252, 324
 Software package, 198
 Space group operation, 191
 Spatial
 extent, 192
 flux, 7, 120, 127, 129, 152–155
 Spatially structured populations, 370

SPDEs with additive noise, 29–32, 53
 Species coexistence
 intransitive, 363, 378
 metastability, 5, 17, 40, 41, 50, 358–364
 storage effect, 11, 350, 374, 377
 Spectral element method, 8, 224–229
 Spin variables, 191
 Spontaneous symmetry breaking, 44
 Stationary, 10, 21, 61, 217–219, 351, 355, 357,
 358, 363, 365, 366, 372–376, 378
 Statistical model, 3–4
 Stochastic difference equation, 10, 366, 370
 Stochastic grid bundling method (SGBM), 9,
 266, 267, 271, 273, 275–290, 293, 294,
 298, 299
 Stochastic persistence
 criteria for, 378
 definition, 367
 Stochastic population dynamics, 367
 Stopping rule, 187, 201
 Stream-function, 42, 44–46
 Streamline conservation, 153
 Streamline filtering, 106–108, 111, 114
 Strong CMC
 copula, 308–311
 pre-copula, 310–312, 319
 Strong Markovian consistency, 307–310
 Structured dependence, 10, 304, 320
 Structure selection problem, 187
 Sturm-Liouville theory, 77
 SUPG scheme, 111, 113
 Surrogate energy surface, 195
 Sustainability, 12, 248, 419–434
 Symmetrically equivalent, 191
 Symmetry, 39, 44, 59, 68, 69, 72, 75, 83, 85,
 98, 122–124, 130–138, 145, 146, 155,
 163–170, 180, 181
 Symmetry action on conservation laws,
 122–124, 128–138, 155, 166–168, 180
 Symmetry determining equation/system, 137,
 146, 168–170, 172
 Systemic risk, 9–10, 324, 345

T

Technological networks, 252
 Telegraph equation, 125, 155
 Thermodynamic EI, 201, 202, 204, 206,
 207
 Thermodynamic parameters, 189, 190
 Thue equations, 393, 400, 402, 405–408,
 411–412
 Thue-Mahler equations, 388, 393
 TiAl, 8, 18, 189, 191, 199–204, 206, 207
 Time consistency, 422, 434
 Timescale separation, 50
 Total derivative, 120, 128, 136
 Translation symmetry, 155
 Transport
 equation, 121, 124, 155
 networks, 252
 Trivial multiplier, 123, 154, 155, 169, 170
 Trivial symmetry, 131, 136, 166
 2-step loop, 191

U

Uncertainty sampling, 187, 198, 253

V

Validate, 188, 190, 199, 333, 335
 Variational PDE (system), 124, 163–166, 169,
 180
 Variational principle, 122, 124, 159–161, 163,
 168, 180
 Variational symmetry, 122, 124, 163–165, 169,
 180, 181
 Vienna ab initio simulation package (VASP),
 186
 Voter model, 18, 44–47

W

Weak* convergence, 360
 WKB approximation, 48
