# Index

## A

Adult hemoglobin (HbA),  
abundance in red blood cells, 31  
crystallization,

high-salt crystallization of  
R-state HbCO A, 7, 11, 12,  
14, 16

high-salt crystallization of  
T-state deoxyHbA, 6, 10,  
11, 15, 16

materials, 6, 7

precautions, 15

proton NMR spectra,

deoxyhemoglobin, 255, 256

HbCO A, 254, 255

oxyhemoglobin, 255

AFM, *see* Atomic force microscopy

Amidation, HbS analysis by high-  
performance liquid  
chromatography, 33, 39,  
40, 46

Amplification refractory mutation  
system (ARMS),

hemoglobin variants, 108

hemoglobinopathy diagnosis  
overview, 101, 102

materials, 108, 109, 112

prenatal diagnosis,

amniotic fluid collection,  
120, 121

chorionic villi sampling, 121

fetal cells in maternal blood,  
121, 122

historical perspective, 117

maternal DNA contamination  
analysis with VNTR  
analysis, 128, 129

peripheral fetal blood  
collection, 120

precautions, 128, 130

preimplantation diagnosis  
samples, 122

primers, 122

protocol, 110, 111, 114

$\beta$ -thalassemia diagnosis, 106,  
107, 112, 113

ARMS, *see* Amplification refractory  
mutation system

Atomic force microscopy (AFM),  
HbC crystallization in red  
blood cells,

applications, 162, 163

cell adherence to scanning disk,  
172, 173

data collection, 162, 163

materials, 167

## B

Bezafibrate, red blood cell oxygen  
affinity effects,  
60, 61

Bio-Rad variant hemoglobin testing  
system, 22, 23

Bohr effect,

nuclear magnetic resonance, 266

red blood cell oxygen affinity  
assay parameters, 58, 59

## C

- Carbon monoxide binding,  
 hemoglobin,  
 assigning rate constants to T- and R-forms, 80  
 association rate constant  
 determination, 69, 70  
 complex accelerating behavior,  
 70, 71  
 dimers and monomers, 72, 73  
 dissociation rate constant  
 determination, 73, 74  
 flash photolysis, 71, 72  
 geminate rebinding, 71  
 history of study, 65  
 kinetic schemes and equations,  
 66–68  
 oxyhemoglobin binding, 78  
 rate constants for human T- and R-state hemoglobins and subunits, 68, 69  
 time resolution of rapid mixing  
 versus flash photolysis, 68, 69  
 two-state analysis, 72
- CC disease, *see* HbC
- Cellulose acetate electrophoresis,  
 globin chains, 97, 99  
 hemoglobin variants, 94, 96, 97, 99  
 transgenic mouse screening,  
 227, 230
- Citrate agar electrophoresis,  
 hemoglobin variants, 94,  
 96, 99
- Clark electrode, *see* Oxygen affinity  
 assay, red blood cells
- Crosslinking, hemoglobin analysis  
 using size-exclusion high-  
 performance liquid  
 chromatography, 40–42
- Crystallization,  
 HbC in red blood cells,  
 atomic force microscopy,  
 applications, 162, 163  
 cell adherence to scanning  
 disk, 172, 173  
 data collection, 162, 163  
 materials, 167  
 batch nucleation studies in vitro,  
 CO HbC crystal preparation,  
 170–173  
 co-habiting hemoglobin  
 effects, 156–158, 165  
 crystal growth, 169, 170–173  
 materials, 166  
 hemoglobin purification, 165,  
 168, 169  
 impurity effects, 163–165  
 overview, 155, 156  
 photoinhibition, 161  
 solubility studies in vitro,  
 158–162, 167  
 video-enhanced DIC  
 microscopy, 161, 166,  
 167, 172  
 X-ray crystallography, *see* X-ray  
 crystallography, hemoglobin
- CSAT, *see* Sickle cell hemoglobin
- Cyanosis, oxygen equilibrium  
 curve, 62

## D

- Denaturing gradient gel  
 electrophoresis (DGGE),  
 hemoglobinopathy diagnosis  
 overview, 101, 102  
 $\alpha$ -thalassemia diagnosis, 104  
 $\beta$ -thalassemia diagnosis, 106, 107  
 DGGE, *see* Denaturing gradient gel  
 electrophoresis

- 2,3-Diphosphoglycerate, red blood cell oxygen affinity assay effects, 59, 60
- Dithionite,  
cyanomet hemoglobin reduction, 189  
oxyhemoglobin reaction, 76–78  
preparation for CSAT determination, 278
- E**
- Electrophoresis, *see* Cellulose acetate electrophoresis; Citrate agar electrophoresis; Denaturing gradient gel electrophoresis; Isoelectric focusing; Polyacrylamide gel electrophoresis
- Epistasis,  
definition, 213, 232  
humans versus mice, 213, 232  
transgenic mice, 232
- F**
- Fetal hemoglobin (HbF),  
composition analysis with high-performance liquid chromatography, 28  
persistence disorders and diagnosis, 107, 108  
sickle cell disease modulation, 200  
transgenic mice and malaria resistance, 221, 222
- Fluorescence, hemoglobin,  
extrinsic fluorescence studies, covalent modification with probes, 148  
overview, 146, 147  
front-face fluorometry, advantages, 134, 135  
applications, 139, 140  
concentration-independent plateau, 135  
instrumentation, 136–139  
polarization measurements, 139  
time-resolved fluorescence, 139  
hemoglobin purification, 147, 148  
inner-filter effects, 133, 134  
intrinsic fluorescence, 133, 140  
materials, 147  
temperature dependence, 149  
tertiary and quaternary structure sensitivity,  
dissociation of subunits, 146  
ligand binding and quaternary structure changes, 141–145  
oxidation studies, 145  
tryptophan emission spectrum shifts, 140, 141
- Front-face fluorometry, *see* Fluorescence, hemoglobin
- G**
- Gap-PCR, *see* Polymerase chain reaction
- Globin chains,  
haplotyping, *see* Haplotyping  
hemoglobinopathies, *see specific diseases*  
preparation from hemoglobin, acid acetone precipitation, 184, 191  
CM-52-cellulose-urea chromatography, 184, 185  
recombinant hemoglobin production in *Escherichia coli*, characterization of chains, 247, 248  
 $\alpha$ -globin chains, expression, 246

purification, 246, 247  
 $\beta$ -globin chains,  
   expression, 246  
   purification, 246  
 $\gamma$ -globin chains,  
   expression, 247  
   purification, 247  
 overview, 243, 244  
 plasmid generation, 244, 245  
 transgenic mice, *see* Transgenic mice

## H

Haplotyping,  
    $\beta$ -globin-like gene clusters,  
     applications, 197  
   genomic DNA extraction,  
     agarose gel electrophoresis,  
       202  
     ethanol precipitation, 202,  
       204, 207  
     octanol extraction of  
       chloroform, 201  
     phenol-chloroform  
       extraction, 201  
     quantification, 202  
     red blood cell lysis, 201  
     RNA and protein removal,  
       202  
     white blood cell lysis, 201  
   haplotype/phenotype  
     correlations, 198, 199  
   materials, 200  
   polymerase chain reaction,  
     primers, 203, 206, 207  
     principles, 203  
     reaction mix, 204  
   restriction enzyme digestion  
     and gel electrophoresis of  
     products, 204, 207

sickle cell anemia patients,  
   geographic distribution,  
   African origins of Sicily  
     mutation, 198  
   expansion in Middle East  
     during Sassanian empire,  
     198  
   overview, 196, 197  
   slave-trade-based gene flow  
     to America, 197, 198  
 HbC origins in Africa, 199  
 HbG mutations, 199  
*HpaI* linkage disequilibrium, 195  
 sickle cell disease,  
   HbF modulation, 200  
   insulin-like growth factor axis,  
     199, 200  
 $\beta$ -thalassemia prenatal diagnosis,  
   124–127  
 HbA, *see* Adult hemoglobin  
 HbC,  
   crystallization, red blood cells,  
     atomic force microscopy,  
       applications, 162, 163  
     cell adherence to scanning  
       disk, 172, 173  
     data collection, 162, 163  
     materials, 167  
   batch nucleation studies in  
     vitro,  
     co-habiting hemoglobin  
       effects, 156–158, 165  
     CO HbC crystal preparation,  
       170–173  
     crystal growth, 169, 170–173  
     materials, 166  
   hemoglobin purification, 165,  
     168, 169  
   impurity effects, 163–165

- overview, 155, 156
  - photoinhibition, 161
  - solubility studies *in vitro*, 158–162, 167
