
Index

A

- Acetylation, of specimens, 40, 147, 326
- Alpha satellite DNA, 318
- Alu*, 3, 5–6, 8
- AMV reverse transcriptase, use of, 325, 327
- Aneuploidy, 312–316
- Apoptosis, detection in tissue sections, 157–158, 163
- Astrocytes, in HIV infection, 332–333
- Autoradiography, 145, 150–151, 295, 301
 - for chromosome labeling, 32, 43

B

- BAC probes, 20–23, 75–77
- Biotin labeling, for *in situ* hybridization,
 - chromosomes, 7, 11, 20, 23, 29, 71, 79, 80–81, 103, 107, 112, 121
 - co-localization with protein, 168–169, 171
 - electron microscopy, 249, 252–252, 272, 274
 - embryo, 286
 - PCR, 99, 235
 - signal amplification, 197, 202, 207
 - tissue and cells, 131, 134–136, 138, 291, 299, 301
- 5'-bromodeoxyuridine, labeling
 - in use in early S-labeling, 34–35
 - use late S-labeling, 34–35

C

- CARD, *see* Catalyzed reporter deposition
- Catalyzed reporter deposition, 195, 197–198, 201–202, 295

Carrier DNA, 98

- salmon sperm DNA, 39, 75, 183,
- CCD camera, 11, 78, 150, 206, 210–211
- Cell culture, for chromosome preparation, 34–36
- Centromeric DNA, *see* Alpha satellite
- Chloroplast, 261
- Chromosomal protein localization, 59–60, 63
- Chromosome painting, 3–4, 199
- Colloidal gold, use of, for detecting hybrids, 59–60, 251–252, 272–273

Comparative gene mapping, 115

Cooled CCD camera, *see* CCD camera

Cosmid probes, 75–76

Cot-I DNA, 6, 8, 12, 17, 20, 32, 39, 41–42, 72, 75, 79, 201, 208, 212

cRNA probes, *see* RNA probes

D

DAPI, use in staining chromosomes, 7, 11–12, 18, 22–23, 72, 77–78, 119, 124, 206, 209, 317, 319

Dementia, HIV-associated, 323, 329

Densitometry, *see* Image analysis

DIG, *see* Digoxigenin

Digoxigenin,

- amplification, 197, 202, 207–208, 210–211

- for electron microscopic hybridization, 269, 272, 274

- use in chromosomal hybridization, 7, 9, 29, 71, 79, 89, 103, 112, 121–122, 127

- Digoxigenin (*cont.*),
 use in co-localization, 20, 23, 168,
 170–171
 use in embryo whole-mounts, 283–284
 use in PCR, 217, 224, 227, 230, 235,
 327, 335
 use in tissue and cell hybridization,
 131, 181–182, 184–185, 291,
 297, 299–301
- Dipteran species, 84
- DNA,
 conformation *in situ*, 61–62
 fiber FISH, 70
 length in probes, 36–37
- DNA-halo, 70
- DNA-protein,
in situ co-detection, 15–24
 interaction, 15–24
- Drosophila melanogaster* chromosomes,
 51–52, 56, 60, 83, 89, 92–93, 95,
 103, 105, 112
D. mauritiana, 112
D. simulans, 112
- Dual-label immunohistochemistry, 136
- E**
- Electron microscopy,
 for apoptosis detection, 157, 163
in situ hybridization, 52, 55, 57, 59,
 60, 63, 136, 239–240, 242, 247–
 248, 253–255
 on chromosome spreads, 57–59
 ultrathin sectioning, 55, 245, 267
- Embryo,
 gene expression, 279
 hybridization to, 283–285
 preparation of embryo, 283–284
 whole-mount technique, 279
- Endosymbiosis, 260
- F**
- Fibroblasts, 71
- FITC, for detection of hybridization,
 in embryos, 286
 in signal amplification, 197, 207, 210–
 211
 on chromosomes, 9, 12, 22–23, 26,
 77–79, 317
 on *Drosophila* chromosomes, 108,
 111–112
- FISH,
 co-visualization of protein–DNA, 15–
 16, 20, 22–23, 26
 in chromosome abnormalities, 312–
 314, 316
 on chromosomes, 3–5, 29, 39, 69–71,
 73, 77–79,
 in exotic species, 115, 119,
- Flow-sorted chromosomes, 3
- Free chromatin fibers, 70
 mapping by FISH, 69–70
 preparation of,
 from cord blood, 78
 from cultured cells, 73
 from lymphocytes, 73
- G**
- Genetic abnormalities, 308–309, 316
- G-banding, of chromosomes, 45–47
- Giemsa staining, of chromosomes, 45–47,
 49
- Glutaraldehyde, as a fixative for *in situ*
 hybridization, 133, 183, 242,
 252, 267, 284
- G-positive chromosomal bands, 5
- H**
- Heterologous probe, 93, 115, 284,
 as negative controls, 252
- High resolution FISH, 70
- HIV, detection of, 328–329

- ^3H labeling of DNA probes, *see* Tritium labeling
- Horseradish peroxidase, 109, 112, 161, 174, 209, 295
- HPV, 226–229
- I**
- Image analysis, 50, 143, 174
- Immunohistochemistry, 170
- Infertile men, 309
- In situ* PCR, 220–232
- RT *in situ* PCR, 229–232, 326–327
- Interphase cells, 3, 69–70, 78
- K**
- Klenow polymerase,
- for detection of apoptosis, 163
- labeling of probes, 31, 108, 182, 246, 270
- L**
- Lambda clones, 107, 115, 121
- London Resin, for embedding electron microscopy specimens, 243, 273
- Lowicryl resin, for electron microscopy 240, 243–245, 254, 273
- Lymphoblasts, 119
- Lymphocytes,
- incorporation of 5'-bromodeoxyuridine, 34–35
- metaphase chromosomes, 207
- M**
- Marsupial chromosomes, hybridization to, 115, 119
- Meiotic prophase chromosomes,
- FISH of, 16, 26
- preparation of, from testicular cells, 18
- Melting temperature of hybrids, *see* T_m
- Micromanipulation, 56–57
- Microsurgery, 56–57
- Mouse embryo, hybridization of, 279
- mRNA detection
- in cultured cells, 133, 135, 139, 296
- in electron microscope sections, 245–253, 267–273
- in tissue sections,
- co-localization with protein, 165, 168, 170
- isotopic and non-isotopic, 131, 139, 145–150, 291, 296–297
- signal amplification, 195, 208–211
- N**
- Nick translation, for probe labeling, 7, 8, 20, 37–38, 75, 121
- preparation of nick translation labeling kit, 79
- Nuclear emulsions, use of, 43–44
- Nuclear pores, 263–264
- O**
- Oligonucleotide probes, 134, 146, 208, 211, 245–246
- P**
- ^{33}P , labeling probes with, 146, 297
- PCR labeling, of probes, 89
- PCR *in situ* hybridization, (*see also In situ* PCR), 220–232, 326–331
- PCR,
- hot start, 12, 221, 225, 229, 334–335
- Phage probes, 20–21, 75–76
- Photography, for microscopy of chromosomes, 47
- Plastid, 260
- Polytene chromosomes, 51, 60, 83, 87, 92–93, 103, 105–107
- DNA conformation on, 61
- microsurgical isolation of, 56
- protein distribution on, 59
- Post-embedding labeling, for electron microscopy, 239, 267
- Pre-embedding labeling, for electron microscopy, 239, 267

- Prefixed chromosomes, hybridization of, 92–94
 Prenatal studies, of chromosomes, 312
 PRINS, 195, 265
 Propidium iodide, as fluorescent stain, 11, 72, 77, 111, 211
 Pseudogenes, 48
- Q**
- Quantitation,
 of HIV-positive cells, 328
 of apoptosis, 163
 of mRNA, 143, 145, 150, 174, 253
 radioactive standards, 145–146
 statistical analysis, 151–152
- R**
- Radioactive *in situ* hybridization
 for viral DNA or RNA, 177, 181–182, 187
 in mRNA detection, 143, 145–146, 291, 293, 297, 301,
 of chromosomes, 29–30, 37–39
 R-banding, of chromosomes, 45–47
 Riboprobe, *see* RNA probes
 Ribosomal RNA, 260–261
 RNase treatment,
 in post-hybridization washing, 149, 248, 300–301
 pretreatment, 40, 75, 98, 120–121
 RNA probes,
 co-localization with protein, 168–169, 171
 dot-blot of labeled product, 299–300
 electron microscopic detection, 252–255, 268–269, 274
 embryos, detection of expression in, 281–283, 291
 isotopic, 144–146, 149
 RNA probes (*cont.*),
 non-isotopic, 131, 134–135, 138–139
 signal amplification, 195
- S**
- Salivary chromosomes, 60, 87,
 for electron microscopy, 57–58
 Satellite DNA, 77
 Scoring, of radioactive *in situ* hybridization by grain counts, 29, 47–48
 Semen, labeling of sperm chromosomes, 309–311, 317–319
 Silver grains, counting of, *see* Image analysis,
 analysis,
 Silver enhancement, *see* Silver intensification
 Silver intensification, of immunocytochemical signals, 170, 275
 snRNA, 263
 Somatic cell hybrids, 3, 7
 Alu-PCR, 6
 human chromosome paints, 3–13
 Specific activity of labeling, calculation of, 38
 Sperm, chromosomes in spermatocytes, 19, 307, 312, 314–319
 Spliceosomes, 263
 Stored, fixed samples, *see* Prefixed chromosomes
- T**
- Tissue fixation, 182, 188, 295
 Tissue morphology, 188, 218, 232, 287, 291
 Tissue sectioning,
 of electron microscope samples, 245, 267
 of light microscope sections, 168, 296
 T_m calculation of, 189, 247, 274
 TNF α , 329–331, 333

- Trichogen cells, 95–96
TRITC, as fluorescent label, 127
Tritium labeling, for *in situ* hybridization, 37–38, 95, 177
TUNEL, *see* Apoptosis, detection in tissue sections
Tyramide, *see* Catalyzed reporter deposition,
- U**
Ultrastructure, *see* Electron microscopy,
Ultrathin sectioning, for electron microscopy, 245, 267
- V**
Vacuolar myelopathy, 331
Viral infection, 177, 181, 221–222, *see also* HPV; HIV, detection of
- Viral nucleic acids detection
 application of, 181
 detection by *in situ* PCR, 217, 323–328
 in formalin fixed archival tissue, 332
Viroids, 261
- W**
Whole mount, preparation of embryos for *in situ* hybridization, 279, 283–285
- Y**
YAC probes, 20–21, 76–77, 107
- Z**
Z-DNA, 62
