

# INDEX

## A

- Aldol reaction, stereoselective aldol addition ..... 74
- Alkaline D-peptidase (ADP)
- from *Bacillus cereus*..... 398
  - screening for activity in microorganisms..... 401–402
  - substrate specificity ..... 402
  - for synthesis of D-Phe-containing peptides ..... 399–401
- Amber codon suppression ..... 125, 126, 188, 189, 201, 210, 211, 216, 227, 243, 244
- D-Amino acid oxidase (DAAO)
- for D-amino acid determination.....274, 275, 318–319
  - assay, by production of  $\alpha$ -keto acids
    - 2,4-dinitrophenylhydrazine method ..... 386–387
    - direct determination ..... 385–386
  - assay, by production of hydrogen peroxide
    - 4-aminoantipyrine method..... 388
    - Amplex Red assay ..... 389
    - o-dianisidine method..... 387
    - by oxygen consumption ..... 384–385
    - by production of ammonia..... 389–390
  - determination of kinetic parameters ..... 391–392
  - for electrophysiological measurements..... 309, 310
  - for L-phenylalanine synthesis..... 24, 25
  - from *Rhodotorula gracilis*
    - enzyme variants ..... 314
    - recombinant in *E. coli*.....274, 302, 382
- D-Amino acids
- bioavailability..... 344–345
  - D- $\beta$ -aspartic acid..... 326, 327
  - determination in biological samples
    - by HPLC..... 328
  - determination in food samples, by amperometric methods ..... 315–316
  - by enzymatic methods
    - oxygen consumption..... 279
    - production of  $\alpha$ -keto acids
      - 2,4-dinitrophenylhydrazine method ..... 277
      - direct determination ..... 277
      - thiosemicarbazide method..... 277–278
    - production of ammonia ..... 278
    - production of hydrogen peroxide
      - 4-aminoantipyrine method..... 278
      - Amplex Red assay ..... 278
    - o-dianisidine method..... 278
    - nutritional value
      - of amino acid derivatives..... 337–352
      - of D-peptides..... 337–352
    - toxicity..... 342, 343, 349, 351
- L-Amino acids synthesis
- from aldehydes by three step reaction ..... 15–16
  - from (hetero)arylacrylates by enantioselective ammonia addition..... 14
  - of  $\beta$ -hydroxy- $\alpha$ -amino acid derivatives..... 77, 81–83
  - of L-naphthylalanine ..... 22, 24–26
  - using 5-substituted hydantoin derivatives..... 38, 41
- Amino transferase (AT). *See* L-Aspartate amino transferase (AspAT)
- Ammonia lyase ..... 3–17
- Antimicrobial peptides
- endogenous..... 169
- D-Aspartate
- determination in biological tissues
    - for age estimation ..... 268, 326, 327
    - by gas-chromatography..... 271–272
    - by HPLC, OPA-NAC derivatization..... 255
    - by immobilized DASPO ..... 390–391
- L-Aspartate amino transferase (AspAT)
- 4-hydroxy-4-methyl-L-glutamic acid synthesis .... 67–68
  - 4-methyl-L-glutamic acid synthesis ..... 65–66, 71
  - recombinant in *E. coli*..... 63–64
- D-Aspartate oxidase (DASPO)
- bovine recombinant in *E. coli*..... 382
  - determination of kinetic parameters ..... 391–392
  - by HPLC method
    - OPA/BTCC pre-column derivatization ..... 372–376
  - by oxygen consumption ..... 384–385
  - by production of  $\alpha$ -keto acids
    - 2,4-dinitrophenylhydrazine method ..... 386–387
    - direct determination ..... 385–386
  - by production of ammonia..... 389–390
  - by production of hydrogen peroxide
    - 4-aminoantipyrine method..... 388
    - Amplex Red assay..... 389
    - o-dianisidine method..... 387
- D-Aspartate racemase assay
- by HPLC method
    - OPA/BTCC pre-column derivatization ..... 372–376

- D-β-Aspartic acid  
determination in biological tissues  
for age estimation ..... 268, 326, 327  
in lens crystalline ..... 328–332
- Assays of  
D-amino acid oxidase ..... 381–394  
D-aspartate oxidase ..... 384, 390  
D-aspartate racemase ..... 373  
*N*-carbamoylase ..... 41, 44–45  
hydantoinase ..... 41, 44–45, 88  
serine racemase ..... 357–365  
*L*-*allo*-threonine aldolase ..... 74, 75
- Azido proteins ..... 243–245
- B**
- BODIPYFL-labeled non-α-amino acid ..... 230
- Branched chain aminotransferase (BCAT)  
4-hydroxy-4-methyl-*L*-glutamic  
acid synthesis ..... 67–68  
3-phenyl-*L*-glutamic acid synthesis ..... 66–67  
recombinant in *E. coli* ..... 64–65
- C**
- N*-Carbamoylase  
assay ..... 41, 44–45  
screening for activity in microorganisms ..... 43
- Chemical aminoacylation ..... 231
- Cyclic amidase ..... 87–103
- D**
- De novo* design ..... 135–164
- Deracemization process  
by dynamic kinetic resolution ..... 23, 29–33  
*L*-naphthylalanine synthesis ..... 24–33  
by stereo-inversion ..... 22–29  
of unnatural α-amino acids ..... 24, 25
- E**
- Enzymes  
alkaline D-peptidase (ADP) ..... 399–400, 402–406  
D-amino acid oxidase (DAAO) ..... 24, 25,  
274, 277, 281–284, 300, 309, 314, 315, 322, 363,  
382–394  
ammonia lyase ..... 3–5  
*L*-aspartate amino transferase (AspAT) ..... 25, 56, 57,  
63–65, 67, 70  
D-aspartate oxidase ..... 382, 384, 390  
D-aspartate racemase ..... 368  
branched chain aminotransferase  
(BCAT) ..... 56, 57, 64–68, 70  
*N*-carbamoylase ..... 41, 43–46, 51, 52  
cyclic amidase ..... 87–103  
glycine oxidase ..... 300, 302  
hydantoinase ..... 38–41, 43, 44, 46, 51, 52, 88, 98  
phenylalanine 2,3-amino mutase ..... 5, 6  
phenylalanine ammonia lyase ..... 5  
serine hydroxymethyl transferase ..... 75, 78–79  
serine racemase ..... 357–365  
*L*-*allo*-threonine aldolase ..... 74
- Essential amino acids ..... 338, 349
- G**
- GFP containing unnatural, fluorescent  
DanAla ..... 201–203, 206–209, 211
- Glutamate  
role in NMDA-receptor functionality ..... 300, 302, 308  
synthesis of analogues ..... 60–68
- Glycine oxidase  
recombinant in *E. coli* ..... 302
- H**
- Heterologous genomic library  
insertional mutant library ..... 47–48  
screening for activity in microorganisms ..... 40, 46–47
- Hydantoinase  
for α- and β-amino acid synthesis ..... 90  
assay ..... 41, 44–45, 95  
enantioselectivity determination ..... 45  
from *Sinorhizobium meliloti*, SmeDhp  
cloning ..... 92–95  
overexpression in *E. coli* ..... 88, 90  
single step purification ..... 96–97
- L**
- Long-term potentiation ..... 300
- M**
- N*-Methyl-D-aspartate (NMDA)  
determination in biological tissues  
by FDNP-Val-NH<sub>2</sub> derivatization ..... 255, 256, 260  
by HPLC ..... 255, 257, 258, 260, 261
- Multistep enzymatic reactions ..... 21–34, 61–63
- N**
- NMDA receptors  
electrophysiological analysis ..... 300, 308, 309  
glycine role ..... 302, 303  
D-serine role ..... 291–292, 302
- NMR analysis of unnatural amino acids  
2D NMR ..... 115–123  
in natural antibiotics ..... 107–123
- Nutritional value ..... 337–352
- O**
- Orthogonal aminoacyl-tRNA synthetase/tRNA pairs.  
*See* Unnatural α-amino acids

**P**

- Patch-clamp recording ..... 304, 308  
PEGylation of azido-proteins ..... 244–245  
Peptide synthesis  
  branched peptides ..... 179  
  conformational stability ..... 176–177  
  D-Phe-containing ..... 399–401  
  solid phase ..... 171, 180  
Phenylalanine 2,3-amino mutase ..... 5, 6  
Phenylalanine ammonia lyase  
  recombinant from parsley  
    enantioselectivity ..... 13  
    kinetic properties ..... 12

**R**

- Racemization  
  for age estimation  
    of dentin ..... 268–270  
    by gas-chromatography ..... 326, 328  
    of lens crystalline ..... 328–331  
  by serine racemase ..... 357–365

**S**

- Scanning mutagenesis ..... 187–197  
D-Serine, determination in biological samples  
  by HPLC  
    derivatization by Marfey reagent ..... 359, 364  
    derivatization by *N*-tert-butylcarbonyl-L-cystein and  
      *o*-phthaldialdehyde ..... 293, 296  
    use of glutaminase and serine  
      dehydratase ..... 292–293, 295  
  by microbiosensor ..... 319–321  
Serine hydroxymethyl transferase, from *Streptococcus*  
  *thermophilus*  
    recombinant in *E. coli* ..... 74  
Serine racemase  
  colorimetric assay ..... 359  
  mammalian, recombinant in *E. coli* ..... 358, 360  
  purification by affinity chromatography ..... 359  
Staudinger-phosphite ligation ..... 241–248  
Synthesis of  
  L-amino acids ..... 3–17, 21–34,  
    37–52, 73–84  
  D-Phe-containing peptides ..... 397–406  
  glutamate analogues ..... 55–72  
   $\beta$ -hydroxy-amino acid derivatives ..... 73–84  
  4-hydroxy-4-methyl-L-glutamic acid ..... 67–68  
  4-methyl-L-glutamic acid ..... 65–66

- L-naphthylalanine ..... 22–33  
peptides ..... 135–164, 169–181, 397–406  
L-phenylalanine ..... 22–33  
3-phenyl-L-glutamic acid synthesis ..... 66–67  
synthesis using hydantoins ..... 37–52

**T**

- L-*allo*-Threonine aldolase  
  assay ..... 78–83  
  from *E. coli* ..... 74  
  for synthesis of  $\beta$ -hydroxy-amino acid  
    derivatives ..... 78–83  
Transamination ..... 24, 55–71

**U**

- Unnatural  $\alpha$ -amino acids  
  in antibiotics  
    *de novo* design ..... 138–159  
    natural ..... 107–124  
  of azido-proteins ..... 243–245  
  in a cell free translation system  
    for  $\beta$ -alanine introduction ..... 230  
    for fluorescent-labeled proteins ..... 230  
    UAG initiation codon ..... 230  
  in *E. coli*  
    for investigation of conformational  
      changes ..... 125–133  
    TAG codon ..... 188  
    TAG mutation library ..... 193–194  
    UAA codon for benzoylphenylalanine,  
      Bpa ..... 127, 130, 131, 133  
  in mammalian cells  
    in CHO cells ..... 216, 217, 220, 223, 224, 227  
    expressing L-lysine derivatives ..... 224, 225  
    expressing L-tyrosine/phenylalanine  
      derivatives ..... 223–225  
    in HEK 293 cells ..... 216, 217, 220, 223–225, 227  
  NMR analysis ..... 107–124, 139, 142  
  in peptides with antimicrobial activity ..... 136, 150, 162,  
    176, 177  
  in *Saccharomyces cerevisiae*  
    CUA codon for fluorescent DanAla ..... 204–206  
    for synthesis of DanAla-containing GFP ..... 204  
  site-specific incorporation ..... 125–133, 215–227  
  by Staudinger-phosphite ligation  
    for introduction of branched polyethylene  
      scaffolds ..... 244–248  
    synthesis using hydantoins ..... 43–49  
Unnatural  $\beta$ -amino acids, enzymatic synthesis ..... 8–16
