A

- Adenovirus
 - gene delivery 9
 - protein expression 5
 - transient transfection 65
- Alphavirus
 - protein expression 5
 - Semliki Forest virus 9
- Amara 66
- Apoptosis
 - CD-APF medium 112
 - cell line manufacture
 - antiapoptosis gene 118
 - clone A *vs.* B 119
 - ELISA/western blot 118
 - monoclonal antibody/growth factor 117
 - percent viability *vs.* time, fed-batch bioreactor 118
 - serum-free medium 119
 - gene expression 113
 - materials
 - plating and screening 114
 - selection 114
 - transfection 113
 - methods
 - plating 116
 - screening 116–117
 - selection 116
 - transfection 114–115
 - predominant method, bioreactors 112
 - proteins, antiapoptotic effects 112
 - volumetric productivity, therapeutics 111
- AU-rich elements (AREs) 162–163
- Autographa californica* multiple nuclear polyhedrosis virus (AcMNPV) 75–76, 80

B

- BacMam
 - definition 76
 - description 41
 - HEK293 cells 55
 - HFBR and wave bioreactor 42

- particles concentration 52
- vector construction 48–49
- viral particle quantification 51
- Bac-to-Bac
 - baculovirus vector 76
 - mammalian baculovirus expression 79
- Baculovirus
 - concentration and diafiltration 44
 - description 75–76
 - endocytic pathway 6
 - mammalian
 - cells infection 90
 - transduction 53
 - molecular cloning technique 42
 - ultrafiltration minimize setup 44
 - vector technology 1
- Bcl-XL 112
- Bicistronic vectors 76

C

- CD20
 - clone, flow cytometry profile 36
 - fluorescent antibody 28
 - IRES, reporter system 37
 - PE-/FITC-conjugation 33
 - reporter protein 30
- Cellfectin 43, 49, 78, 84
- Chinese hamster ovary (CHO) cells
 - adenovirus transduction 9
 - description 93–94
 - DG44 cells
 - expression vector 163
 - suspension 163, 165
 - drugs 162
 - MARs 95
 - posttransfection selection 32
 - protocol, preparation 103–104
 - transfection, plasmid DNA
 - advantages and drawbacks 216
 - cell line and media 216–217
 - comparison, polyplexes and liposomes 214
 - difficulties 215–216

Chinese hamster ovary (CHO) cells (*Continued*)
 DNA preparation.....29
 epithelial-like cell line.....213
 expression and host cell lines218
 flow cytometry analysis.....221
 IgG, ELISA quantification.....221–222
 large-scale manufacturing.....213–214
 lipoplexes preparation219–220
 liposome preparation218
 pH-sensitive liposomes.....215
 plasmids.....216
 polyplexes preparation220–221
 transient transfection efficiencies, comparison222
 viral vectors and electroporation214

CHO-K1-S cells, routine cultivation
 lipofection.....102–103
 preparation, transfection.....102

Clone construction
 attL/attR.....228
 attP vectors, PCR
 fragments.....235–236
 primer lists.....233–234
 products and amplify attP signals232
 reactions.....232–234
 entry clones.....242–244
 materials228–229
 mixed genes, LR reaction244–245
 multiple DNA fragments assemble.....229–231
 multiple genes expression vector, assembly245–246
 multisite gateway.....227, 246, 248
 pDONR vectors
 amplify attP signals.....232
 attPx and attPxr signals247
 ligase/TOPO cloning230
 pUC-attPx and pDONR201.....236, 239
 SalI/PstI.....247
 source plasmids.....236–238
 pENTR clone modular.....245
 pUC-attP vectors, sites
 amplify attP signals, pDONR201.....230, 232
 primer lists.....233–234
 reverse orientations.....231
 pUC-DEST vectors
 BP reaction.....239–240
 invitrogen.....246
 primer lists.....239–242

Codon optimization8, 161

Co-expression
 methods174
 polypeptide chains, fluorescent markers.....175
 screening, plasmids147
 transient.....139, 149–150

Colony PCR
 DH10B.....248
 recombinant bacmids identification.....78

Constant domain.....141, 144

Coproducing multiple proteins
 antibiotic to fluorescence selection176
 biophysical characterization.....173
 eukaryotic cell function.....173
 expression constructs175
 fluorescence activated cell sorter (FACS).....175
 fluorescence-based method.....174
 IRES.....175

materials
 cell culture and stable lines generation.....177
 DNA, transfection177
 double-fluorescent colonies.....178
 expression vectors construction.....177
 FACS sorting.....178
 His-tag based Fab purification178
 large-scale protein expression178

methods
 cell culture.....179–180
 cloning.....178–179
 double-fluorescent colonies.....180
 FACS sorting.....180–181
 His-tag based protein purification.....182
 protein expression181–182
 transfection179
 recombinant protein expression174

Co-transfection
 GFP.....103
 human monoclonal antibody14
 IgG chains23
 internal control vector.....127–128
 lentivirus9
 MAR.....100–101
 plasmid separation6
 transfection efficiency variation132

Cytomegalovirus (CMV) promoter
 bicistronic mammalian expression
 cassette cloning79–80
 primers.....89
 recombinant protein-expressing cells.....161

D

Design of experiment (DOE)
 factors selection54
 initial values selection54–55
 interpretation.....55
 materials, mammalian cell secretion43
 setup.....55

DH10Bac
 competent cells making77, 80–82
 transformation
 pFIP-GFP82
 transfer vector77–78

DHFR. *See* Dihydrofolate reductase

Diafiltration
 baculovirus concentration 44
 DMEM 61

Dihydrofolate reductase (DHFR)
 amplification 10
 cell line drugs 6
 gene amplification system 94
