

INDEX

A

Acetate accumulation 283, 284, 286, 290, 298
Acetate control 283–302
Acetyl-CoA synthetase..... 284, 290, 293, 299
Actinomycece..... 153–174
Adaptation..... 75, 96, 107, 311
Aerobic 3, 77, 83, 215, 224, 227, 235, 240, 283
Aeromatic compound 88, 261–280
Aeromicrobium erythreum 154
Amino acid synthesis..... 177
Anaerobic 3, 6, 18, 77, 82, 83, 113, 115, 139, 205,
210, 215, 224, 227
Anneal..... 28, 67, 106, 122–124, 271, 275
Antibiotic
antibiotic cassette..... 80, 276–277
antibiotic marker 171, 261–280
antibiotic selection..... 55, 56, 95, 99, 165, 262
non-antibiotic selection 261

B

β-carotene 50, 51, 54–56, 58–61
Bacterial biosensor..... 262
Batch culture 79, 240
Biofuels..... 137–150
Bioluminescent reporter 87–92
Biomass conversion 1–14
Bioreactor 77, 83, 218–221, 223, 228–230, 234, 307
Bioscreen C Analyzer..... 246, 248, 253–254
Biotechnology 17, 47, 139, 178, 195, 217–219
Butanol tolerance..... 138, 149

C

Carotenoids 49–61
Cellulase 1–14
Chromosomal integration..... 56, 262, 263
Chromosomal modification..... 50
Chromosomal promoter replacement 50, 51, 54–57
Cloning vector..... 13, 94, 105, 107, 169, 263
Clostridium acetobutylicum 138
Clostridium thermocellum 111–136
Cofactor balance..... 201
Cofactor preference 18

Cofactor switch 18
Comparative genomics 153, 154
Comparative proteomics..... 140
Consolidated bioprocessing (CBP) 113
Continuous culture..... 77, 78, 83
Control algorithm..... 235–241
Crude cell extract..... 10, 11

D

Decontamination..... 313, 314
Directed evolution 34, 75
Dissolved oxygen (DO)..... 218, 224, 227, 233–243, 311
DNA assembly 93–108
Double-strand break repair..... 94
Dry cell weight (DCW)..... 1, 226, 227, 286, 294–296, 302
Dynamic DO-stat control 239, 241, 243

E

Enrichment 6, 13, 14, 35, 36, 122–124,
185, 188, 189, 194, 237
Enzyme assay 10–12
Enzyme engineering..... 18
Enzyme variant 27
Erythromycin production 155, 156, 172, 173
Escherichia coli (E. coli)..... 17, 49–61, 75–85,
88, 94, 155, 157, 177–196, 200, 283, 286, 306
Ethanol tolerant 111–136
Ethanologenic yeast..... 245–258
Excision 50, 60, 64, 65, 70–73, 276, 280

F

Fermentation
fed-batch fermentation..... 233–243, 312
large scale fermentation 283–302
microtiter fermentation 173, 218, 219
Fluorescence activated cell sorting (FACS) 177–196
Flux balance analysis (FBA) 197–215

G

Gene knockout..... 197, 198, 200, 201, 205–207, 209–214
Genetic modification..... 149, 200, 234, 308
Genetic stability 169

Genome engineering 63–73
 Genome sequencing 111, 155
 Genomic scale metabolic model 198, 204
 Genotyping 79, 84, 209, 287
 Green fluorescent protein (GFP) 37, 40, 41, 44, 47
 Growth rate 78, 84, 85, 208, 209, 214, 234, 241, 246,
 253–257, 283, 284, 302, 312

H

Heterologous gene expression 198
 High isoprenoid flux 49–61
 High Performance Liquid Chromatography
 (HPLC) 5, 11–12, 78, 84, 104,
 173, 225, 235, 286, 297
 Homology modeling 18
 Hydrolysis 1, 2, 10–12, 245, 249–253, 256–258

I

Image analysis 142–144, 192–193
 In silico optimization 212
 In vivo evolution 75–85
 Inclusion body 178, 183, 293
 Inducer 157, 168, 268, 279
 Induction 9, 24, 29, 53, 77, 183,
 193, 237, 240, 285, 294, 295, 301, 302, 309, 313
 Industrial biotechnology 217
 Inhibitory effect 246, 248, 253, 254, 256
 Inverted repeats 63–73
 Isoprenoid pathway 49–51, 61

L

Library construction 13
 Lignocellulosic biomass hydrolysate 245–258
 Luminometry 88, 89, 91, 92
 Lumio labeling 185, 187–188
 Lux reporter gene fusion 88
 LuxArray 88–92

M

Mass spectra (MS, MS/MS) 140, 144–146, 150
 Metabolic engineering 50, 87, 93–108,
 111–136, 138, 153–174, 177–215, 233, 283–302
 Metabolic flux 50, 51, 208, 209, 213
 Metabolic pathway 17, 38, 75–85, 138, 141, 198
 Metabolic pressure 76, 79, 84
 Metagenomics 3
 Microfermentor 217–230
 Microorganism 3, 17, 18, 49, 50, 75–83,
 138, 141, 217, 235, 241, 243, 246, 248, 257
 Mini-transposon 264, 272
 Minimization of metabolic adjustment
 (MOMA) 208–214

Mutagenesis

chemical mutagenesis (MMS, MNNG) 155
 in vivo mutagenesis 154
 site saturation mutagenesis 18–20, 23, 30
 transposon mutagenesis 154
 Mutant 19–20, 34, 35, 37–40, 43,
 45, 75, 79, 80, 82, 85, 112, 113, 133, 138, 141, 144,
 146, 148, 149, 155, 156, 166, 171–174, 210, 211,
 213, 300, 301, 308, 310

Mutation rate 76, 79

N

NADH 17–19, 25, 27
 NADPH 17–19, 21, 25, 27, 205
 Next-generation sequencing (NGS) 111–113

O

OptFlux 213
 OptGene 80, 210, 211
 Optimization
 fermentation optimization 217–230
 pH optimization 228, 229
 strain optimization 217–230
 temperature optimization 228
 OptKnock 80, 210–213
 OptStrain 210–212
 Orthogonal circuit 261

P

Peptide production 177–196
 Phage (Bacteriophage)
 contamination prevention 306, 307
 P1 transduction 53, 61, 300
 phage contamination 309, 310, 313
 phage detection 312–314
 phage eradication 313–314
 phage evolution 311–312
 phage infection 305–314
 phage outbreak 307–314
 prophage 308, 312, 313
 Phenotype 65, 75, 78, 79, 84, 138,
 155, 156, 165, 173, 174, 185, 189, 195, 198, 200,
 201, 205, 207, 209, 210, 215, 257
 Phylogenetic analysis 5–6
 Plasmid
 ColE1 plasmid 35, 37
 ori 33–35, 45, 46
 plasmid copy number 33–47
 plasmid rescue 160, 167–168
 Polymerase chain reaction (PCR) 64
 Polysaccharide 2
 Pretreatment 245, 246, 249–254, 256

Process development..... 218, 235, 243
 Promoter..... 34, 37, 50–52, 54–59, 61,
 81, 82, 84, 87–92, 101, 155, 180, 190, 262–264,
 266–271, 274, 275, 277, 278, 290–293, 299, 301
 Protein engineering 17–30
 Protein expression..... 24–26, 34, 38, 40,
 144, 150, 235–237, 241, 243
 Protein purification 26–27
Pseudomonas putida (*P. putida*)..... 262, 265–277, 279
 Pyrosequencing..... 114–115, 117–120, 124–131, 133
 Pyruvate oxidase 284, 286, 293, 299

R

R-loop..... 33, 34, 37, 45
 Rate-limiting..... 50, 61
 Recombinant gene expression..... 50
 Recombinant protein..... 34, 235–237, 240,
 241, 243, 283, 294, 295
 Recombination
 homologous recombination 50, 51
 λ-Red recombination..... 50, 52–57
 site specific recombination..... 50, 277
 Recombineering 93
 Regulation
 downregulated 146
 transcriptional regulation..... 206–207
 upregulated 90, 146
 Renewable energy..... 1
 Reverse engineering..... 153–155, 174
 RNA I..... 34, 37, 45
 RNA II..... 34, 45

S

Saccharomyces cerevisiae 63–73, 96, 200, 247
 Sampling 4, 6, 219, 307, 314
 Scale down..... 218, 233–243

Screening

 FACS screening/FACS sorting 178, 185–189
 high throughput screening..... 156, 178, 218, 219
 plate screening 165–166
 shake flask screening..... 166
 Selection 7, 34–38, 50, 55, 56, 72, 75, 76,
 78, 83–84, 95, 96, 99, 157, 159, 165, 170, 172, 187,
 214, 262, 265–267, 276–278, 291, 308, 309
 Single nucleotide polymorphism (SNP)..... 130–133
 Solventogenic 141, 146
 Specific activity..... 18, 34, 277
 Spontaneous mutation..... 75
 Stitching oligonucleotide..... 94, 96, 97, 105, 106
 Strain engineering 269
 Strain evaluation..... 218, 233–243
 Substrate..... 3, 5, 9, 11–13, 18, 19,
 24, 29, 35, 75, 76, 78–80, 83, 84, 138, 141, 234,
 236–240, 243, 246
 Synthetic biology..... 101, 262

T

Temperature sensitive 30, 45, 51, 58, 60,
 160, 289, 292, 301
 Thin Layer Chromatography (TLC) 5, 11, 12, 173
 Trace element (Trace metal) 6, 77, 157,
 158, 168, 248, 285
 Trait stacking..... 50
 Transformation
 chemical transformation 45
 electroporation..... 43, 45
 protoplast transformation 171, 172

Y

Yeast..... 4, 5, 18, 40, 51, 63–66, 73, 77, 78, 94–99,
 104–108, 139, 157, 158, 179, 207, 215, 221, 222,
 227, 230, 235, 243, 245–258, 264, 268, 277, 285
