Index
AKP, evaluation of patient with
(continued)
—overuse, 93–94
—PCL deficiency, 94
—RSD, 94
—severe pain, 94
—imaging studies used in, 105–109
—CT, 106–109, 110–111
—MRI, 106, 109, 112, 132
—pain, psychological, RSD v., 105
—scientific program for, 138–139
—model relating to, 135–136
—exercise program constructed for,
AKP, prevention of
—exercise program constructed for,
139–140
—model relating to, 135–136
—scientific program for, 138–139
—evaluation of, 138–139
—sequence of, 138
AKP, skeletal malalignment and,
185–198
—classification relating to, 187–188
—clinical experience relating to,
195–198
—diagnosis of
—frontal plane alignment relating
to, 187–188
—rotational plane alignment
relating to, 188–190
—sagittal plane alignment relating
to, 190
—patellofemoral joint pathology and,
185–186
—Q angle and, 186
—rotational malalignment relating to
—contact pressures and, 190–191
—MPFL strain and, 191–192
—patellofemoral joint position in
space and, 192–193
—treatment for, 193–195
—osteotomy, level of, 194–195, 198
AKP, treatment of, after ACL
reconstruction
—anterolateral interval release, 295–302
—background of, 295–295
—complications of, 300
—discussion about, 300–302
—materials and methods for,
296–297
—results of, 298–300
—surgical technique for, 298
AKP, uncommon causes of, 115–132
—infrapatellar fat pad, 117–123
—PFM, 115–118
—posterior aspect of the knee, 120–121, 124
—referred pain, 118–120
—tumors, 117–118, 130–132
Alignment
—clinical case analysis of, 357
—of extremity, lower, 148–149
—frontal plane, 187–188
—of knee, anomalies of, 102
—patellofemoral, 8
—sagittal plane, 190
Anatomical factors, for patellar
instability, 65–69
Anatomical features, of patellar
dislocators, 85–87
Anatomic basis, for selective
derervation, 363–364
Anatomy
—histopathology and, of patellar
tendinopathy, 269
—of MPP, 244
—pathophysiology and, of articular
cartilage, 202–204
—of suprapatellar plica, 239–241
Anomalies, of knee alignment, 102
Anterior cruciate ligament. See also
ACL
Anterior interval release, after ACL
reconstruction
—anterolateral interval release, 295–302
—background of, 295–295
—complications of, 300
—discussion about, 300–302
—materials and methods for,
296–297
—results of, 298–300
—surgical technique for, 298
Arthrofibrosis
—avoiding arthrofibrosis in, 358
—diagnosis in, 358
—expected outcomes in, 357–358
—pathoanatomy in, 356–357
—surgical indications and
technical pearls in, 357
—case report of
—diagnosis in, 353–355
—history in, 353
—imaging studies in, 353
—initial management in, 355–356
—physical examination in, 353
—post-op rehabilitation in, 356
—surgical findings and technique
in, 356
Arthroscopic technique, for MPP
syndrome, 245–250
Arthroscopies, 16, 89, 109–112, 305
Articular cartilage
—patella and trochlea defects relating
to, 202–204
—patellar, 5, 6, 7, 14, 16, 33, 72–74
Articular geometry, 78
Articular pressure, 73
Athletes. See AKP, athletes with,
conservative treatment of
Autografts. See also ACL
reconstruction, using autografts
—bone-patellar tendon-bone, 4
—transplantation, osteochondral, 217
Autologous chondrocyte
implantation, 215–216
Autologous periosteum
transplantation, 6, 227–237
—evaluation of, 234–235
—postoperative treatment after,
229–230, 232–233
—preoperative evaluation for, 232
—results of, 235
—surgical technique for, 232, 235
Axial compression patellar test, 94,
95–96
Axial radiograph, 7
B
Balance and coordination training, 155
Biochemical investigations, of ACL
reconstruction, 315
Biomaterials, for resurfacing
techniques, 216
Biomechanical bases, for AKP,
55–76
—clinical relevance of, 70
—impact of running and jumping
—chronic lesions caused by,
55–56
—footwear relating to, 56–57
—ground surface relating to,
56–57
—jumper’s knee, 55
—patellar tendinopathy caused by,
55–56
—shock absorption relating to, 56
—mechanical theory, 55
—PFJR, 55–56, 57–61
—PFJ relating to, 57–61
Biomechanical bases, for AKP (continued)
—Q angle and valgus vector, 61–62
—pronation relating to, 62, 102, 106

Biomechanical bases, for patellar instability, 65–75
—anatomical factors, 65–69
—V-MVO, insufficiency of, 65–67
—mechanical theory, 69–70
—quadriiceps muscles, strengthening of, 70–74
—exercises for, 71–72

Biomechanical faults
—nonstructural, 168
—structural, 168

Biomechanics, foot, altered, 168, 169
Biopsy, excision, 3
Blazina’s stage III, 14
Bone morphology, subchondral, 8, 70
Bone, overload, subchondral, 55
Bone-patellar tendon-bone autografts, 4
Bones, long, osteotomy of, 341
Bone torsion, 188–189
Bracing
—patellofemoral, 141–143, 144
—and taping, for AKP, 155–157

C
Cartilage. See also Patella and trochlea, cartilage defects of; Patellar cartilage defects, full-thickness
—hyaline, 236
—patellar articular, 5, 6, 7, 14, 16, 33, 72–74, 202–204
Cartilage degeneration, 7
Cartilage repair stimulating factors, 216
Cartilaginous callus, 227
Case studies, for AKP, 124–132, 323–335
C fibers, 37
Chemical synovitis, 70
Chondral injury, patellar, 5
Chondral (cartilage) lesion, 5, 6
Chondromalacia patellae, 4–7, 16, 122, 148, 185, 245
Chronic lesions, 55–56
Chronic synovitis, 124
Cincinnati patient perception scale, 22, 24
Cincinnati symptom rating scale, 22, 23
Computed tomography. See CT
Continuous passive motion. See CPM
Coordination training, 155
Covert osseous pathology, 11
CPM (continuous passive motion), 229–230, 233–234, 237
CT (computed tomography), 8, 9, 10, 25
Cyclops syndrome, 117, 124

D
Diagnosis
—AKP and skeletal malalignment, relating to, 187–188, 188–190, 190
—arthrofibrosis and patella infera, relating to, 353–356
—differential, 148
Diagnostic criteria, for isolated symptomatic PFM, 22
Diagnostic criteria, for isolated symptomatic PFM, 135
Diagnostic criteria, isolated symptomatic PFM, 135
Diagnostic criteria, isolated symptomatic PFM, 135
Diagnostic criteria, isolated symptomatic PFM, 135
Diffusion spectrum imaging, 285–289
Diffusion spectrum imaging, 303–305
Diffusion spectrum imaging, 307
Dissection studies, 307
Doppler ultrasound, 264–265
Dye, Scott F., 5, 10–12

E
Eccentric exercise protocols, 275–277
Eccentric tendon strengthening, 264, 277
Ehlers-Danlos syndrome, 101, 104
Emotional and psychiatric examination, 103–104
Envelope of Function, 11–12
Examinations
—clinical, 169–173
—emotional, 103–104
—histological, 311–312
—physical, 94–103, 105–107, 143, 171–173, 269, 353
—psychiatric, 103–104
—ultrastructural, 312–314
Excision biopsy, 3
Exercise protocols, eccentric, 275–277
Exercises, 71–72, 139–140, 155
Extrinsic factors, of AKP, 135–136

F
Femoral interference screw, 126, 129, 130
Femoral trochlea, 10
Flexibility, 151
—of hamstrings, 99–101, 143
Foot biomechanics, altered, 168, 169
Foot orthoses, 141, 143–144
Foot problems, treatment of, 180–181
Footwear, 56–57
Fractures, stress, 117, 122
Free periosteal grafts, 228–229
Frontal plane alignment, 187–188
Frontal spatial plane, 62
Fulkerson’s relocation test, 97–100
Functional knee scores, 151–152
Intramuscular hemangioma, 117–118
Intrinsic factors, of AKP, 135–138, 140–144
IPR (Insall’s proximal realignment), 8–11, 21–22, 25, 28–30, 116
IPSG (International Patellofemoral Study Group), 4, 5, 6, 67, 323
Ischemia, 44–45
Isokinetic training, 154
Isolated symptomatic PFM
— as AKP, 33
— Neural Model relating to, 33–51
— as AKP, 33
Isolated symptomatic PFM, clinical study for, 21–32
— patients and methods
— diagnostic criteria for, 22
— follow-up evaluation, 22–23
— patient selection for IPR, 22
— statistical data analysis of, 23
— subjects, 21–22
— surgical technique, 22
— results
— Cincinnati patient perception scale used in, 22, 24
— Cincinnati symptom rating scale used in, 22, 23
— clinical, 23–24
— discussion/conclusion, 27–30
— image analysis of, 24–26
— Lysholm score used in, 22, 24, 25–26, 198
— SEMG analysis of, 26–27
— Tegner activity level used in, 22, 25–26, 198
Isometric training, 154
ITB (iliotibial band), 100–101, 117, 121, 306
J
“J” sign, 102, 105, 288
Jumper’s knee, 55, 62, 272, 315
Jumping, impact of, 55–57
K
Kinetic chain training, closed and open, 154–155
Knee. See specific AKP headings; specific Patella headings; specific Patellofemoral headings
Knee arthroplasties, 7
Knee extensor mechanism, components of, 77–80
Knee extensor mechanism surgery, 7
Knee ligaments, stability of, 103
Knee pads, 143
Knee-related functional training, 155
L
Lateral patellar compression syndrome, 7
Lateral patellar motion, normal limits of, 78–85
— articular geometry relating to, 78
— lateral patellar plica, 253–254
— lateral patellofemoral ligament reconstruction, 339–340
— lateral retinacular release, 7, 15–16, 33
— lateral retinaculum, 33
— hyperinnervation into, AKP and, 36–44
— morphologic neural changes into, 34–36
— nerve damage, 34–36
— lateral subluxation of the patella, 69
— lesions
— chondral (cartilage), 5, 6
— chronic, 55–56
— infrquent, 117–123
— meniscal, 4
— myelinated nerve fibers, 36–44
— neural markers, for
— neural growth factor, 42–44
— neural and vascular models of pain, 36–44
— neural model, 33–51
— nerve damage, 34–36
— nerve fibers
— myelinated, 36–37, 39, 40
— unmyelinated, 37
— nerves
— infrapatellar, 305, 307–309
— sensory, complications of, 307–309
— neural sprouting, 44, 47, 48
— neuronal anatomy, for AKP, 33–54
— neuromatous knee pain, evaluation and management of
— neural basis for selective denervation, 363–364
— case examples of, 368–371
— discussion about, 371–372
— technique of selective denervation, 364–368
— nerve fibers, nonsteroidal anti-inflammatory medication, 296
— nerve growth factor, 42–44, 46, 48, 50
O
Ober’s test, 100–103, 172
Obesity, PFJ and, 60
OCD (osteocondral dissecans), 115–116
Orthoses, 141, 143–144
Oscicles, in anterior tibial tubercle, 117, 123
Osteoarthritis, 122, 126–127, 185
Osteoarthrosis, 8, 13, 22, 55
Osteochondral autograft transplantation, 217
Osteochondral allograft transplantation, 216–217, 341–342
— transplantation, 216–217, 341–342
— osteochondral autograft transplantation, 217
— osteochondritis dissecans, 115–116
— osteonecrosis, 117, 120
— osteoporosis, 50
Osteotomy
— for AKP, skeletal malalignment and, 194–195, 198
— of long bones, 341
Outer fibrous layer, of periosteum, 227
Overload
— AKP relating to, 136–138, 143
— bone, subchondral, 55
Overuse, pain caused by, 55
— sports relating to, 74–75
— swimming relating to, 64

P
Patellar pain, patellar instability problems v.; specific AKP headings
— neural and vascular models of, 264–265
— neumatous knee, 363–372
— overuse relating to, 55, 64, 74–75
— patellar, 147

— patellofemoral, 7–8
— psychological, 105
— referred, 118–120
— sports relating to, 74–75
— swimming relating to, 64
Palpation, 96–97, 269
Paratendinitis, 3
Patella. See also Bipartite patella
— displacement of, 16, 77–78, 83
— recurrent dislocation of, 7, 16, 77
— rotation of, 172
Patella alta, 67
Patella and trochlea, cartilage defects of
— articular cartilage relating to, anatomy and pathophysiology of, 202–204
— repair of, 207–221
— abrasion arthroplasty, 210
— debridement, 209
— microfracture, 210
— Pridie drilling, 209–210
— resurfacing techniques, 210–221
— therapeutical options for, 204–221
— congruence, improvement of, 205–206
— conservative treatment, 204
— malalignment correction, 205
— patellofemoral hyperpression, lessening of, 205
Patella infera. See Arthrofibrosis, patella infera and
Patella plica syndrome
— infrapatellar plica, 250–253
— lateral patellar plica, 253–254
— MPP
— anatomy of, 244
— syndrome of, 244–250
— supratella plica
— anatomy of, 239–241
— clinical significance of, 241–244
Patellar. See Bone-patellar tendon-bone autografts; Lateral patellar compression syndrome; Lateral patellar motion, normal limits of Patellar apprehension test, 97
Patellar articular cartilage, 5, 6, 7, 14, 16, 33, 72–74
Patellar cartilage defects, full-thickness
— autologous periosteum transplantation for, 6, 227–237
— clinical studies of, 230–231
— free periosteal grafts relating to, 228–229
— treatment, indications for, 231
Patellar chondral injury, 5
Patellar dislocation
— medial, 8
— pain caused by, 77
— patho-anatomy of, 87–89
— primary, 13
— recurrent instability caused by, 77
— surgical treatment for, 77
Patellar dislocators, anatomical features of, 85–87
— patella alta, 86–87
— quadriceps dysplasia, 87
— tibial tuberosity-trochlear groove distance, 87
— trochlear dysplasia, 86–87
Patellar glide test, 94, 97–98, 171
Patellar instability
— anatomical factors for, 65–69
— biomechanical bases for, 65–75
— isolated symptomatic PFM relating to, 33
— pathogenesis of, 21–32
Patellar mobility, 149
Patellar pain, patellar instability problems v., 147
Patellar pathology, 5, 16
Patellar position, 149
Patellar subluxation, recurrent, 7, 16
