

## About the Editors

**Javier Faulin** is an Associate Professor of Operations Research and Statistics at the Public University of Navarre (Pamplona, Spain). He also collaborates as an Assistant Professor at the UNED local center in Pamplona. He holds a Ph.D. in Management Science and Economics from the University of Navarre (Pamplona, Spain), an M.S. in Operations Management, Logistics and Transportation from UNED (Madrid, Spain), and an M.S. in Mathematics from the University of Zaragoza (Zaragoza, Spain). He has extended experience in distance and web-based teaching at the Public University of Navarre, at UNED (Madrid, Spain), at the Open University of Catalonia (Barcelona, Spain), and at the University of Surrey (Guildford, Surrey, UK). His research interests include logistics, vehicle routing problems, and simulation modeling and analysis, especially techniques to improve simulation analysis in practical applications. He has published more than 50 refereed papers in international journals, books, and proceedings about logistics, routing, and simulation. Similarly, he has taught many courses on line about operations research (OR) and decision making, and he has been the academic advisor of more than 20 students finishing their master thesis. Furthermore, he has been the author of more than 100 works in OR conferences. He is an editorial board member of the *International Journal of Applied Management Science* and an INFORMS member. His e-mail address is e-mail: javier.faulin@unavarra.es.

**Angel A. Juan** is an Associate Professor of Simulation and Data Analysis in the Computer Science Department at the Open University of Catalonia (Barcelona, Spain). He also collaborates, as a lecturer of Computer Programming and Applied Statistics, with the Department of Applied Mathematics I at the Technical University of Catalonia (Barcelona, Spain). He holds a Ph.D. in Applied Computational Mathematics (UNED, Spain), an M.S. in Information Technology (Open University of Catalonia), and an M.S. in Applied Mathematics (University of Valencia, Spain). Dr. Juan has extended experience in distance and web-based teaching, and has been academic advisor of more than 10 master theses. His research interests include computer simulation, educational data analysis, and mathematical e-learning. As a researcher, he has published more than 50 papers in international journals, books, and proceedings regarding these fields, being also involved in several international research projects. Currently, he is an editorial board member of the *International*

*Journal of Data Analysis Techniques and Strategies*, and of the *International Journal of Information Systems & Social Change*. He is also a member of the INFORMS society. His web page is <http://ajuanp.wordpress.com> and his e-mail address is e-mail: [ajuanp@uoc.edu](mailto:ajuanp@uoc.edu).

**Sebastián Martorell** is Full Professor of Nuclear Engineering and Director of the Chemical and Nuclear Department at the Universidad Politécnica de Valencia, Spain. Dr. Martorell received his Ph.D. in Nuclear Engineering from Universidad Politécnica de Valencia in 1991. His research areas are probabilistic safety analysis, risk-informed decision making, and RAMS plus cost modeling and optimization. In the past 17 years that he has been with the University of Valencia, he has served as consultant to governmental agencies, nuclear facilities and private organizations in areas related to risk and safety analysis, especially applications to safety system design and testing and maintenance optimization of nuclear power plants. Dr. Martorell has over 150 papers in journals and proceedings of conferences in various areas of reliability, maintainability, availability, safety, and risk engineering. He is a University Polytechnic of Valencia Scholar-Teacher in the area of probabilistic risk analysis for nuclear and chemical facilities. Dr. Martorell is calendar editor and a member of the Editorial Board of *Reliability Engineering and System Safety International Journal*. He is also an editorial board member of the *European Journal of Industrial Engineering*, the *International Journal of Performability Engineering* and the *Journal of Risk and Reliability, Proceedings of Institution of Mechanical Engineers*, Part O. He is Vice-Chairman of European Safety and Reliability Association (ESRA). He has been a member of Technical Committees of the European Safety and Reliability Conferences (ESREL) for more than 10 years and Chairman of ESREL 2008. His e-mail address is e-mail: [smartore@iqn.upv.es](mailto:smartore@iqn.upv.es).

**José-Emmanuel Ramírez-Márquez** is an Assistant Professor of the School of Systems & Enterprises at Stevens Institute of Technology, Hoboken, NJ, USA. A former Fulbright Scholar, he holds degrees from Rutgers University in Industrial Engineering (Ph.D. and M.Sc.) and Statistics (M.Sc.) and from Universidad Nacional Autónoma de México in Actuarial Science. His research efforts are currently focused on the reliability analysis and optimization of complex systems, the development of mathematical models for sensor network operational effectiveness and the development of evolutionary optimization algorithms. In these areas, Dr. Ramírez-Márquez has conducted funded research for both private industry and government. Also, he has published more than 50 refereed manuscripts related to these areas in technical journals, book chapters, conference proceedings, and industry reports. Dr. Ramírez-Márquez has presented his research findings both nationally and internationally in conferences such as INFORMS, IERC, ARSym and ESREL. He is an Associate Editor for the *International Journal of Performability Engineering* and is currently serving a two-year term as President Elect of the Quality Control and Reliability division board of the Institute of Industrial Engineers and is a member of the Technical Committee on System Reliability for the European Safety and Reliability Association. His email address is e-mail: [jmarquez@stevens.edu](mailto:jmarquez@stevens.edu).

## About the Contributors

**Gleb Beliakov** received a Ph.D. in Physics and Mathematics in Moscow, Russia, in 1992. He worked as a Lecturer and a Research Fellow at Los Andes University, the Universities of Melbourne and South Australia, and currently at Deakin University in Melbourne. He is currently a Senior Lecturer with the School of Information Technology at Deakin University, and an Associate Head of School. His research interests are in the areas of aggregation operators, multivariate approximation, global optimization, decision support systems, and applications of fuzzy systems in health-care. He is the author of 90 research papers and a monograph in the mentioned areas, and a number of software packages. He serves as an Associate Editor of *IEEE Transactions on Fuzzy Systems* and *Fuzzy Sets and Systems* journals. He is a Senior Member of IEEE. His e-mail address is e-mail: [gleb@deakin.edu.au](mailto:gleb@deakin.edu.au).

**Christophe Bérenguer** is Professor at the Université de Technologie de Troyes, France (UTT) where he lectures in systems reliability engineering, deterioration and maintenance modeling, system diagnosis, and automatic control. He is head of the industrial engineering program of the UTT and of the Ph.D. program on system optimization and dependability. He is member of the Charles Delaunay Institute (System Modeling and Dependability Laboratory), associated to the CNRS (French National Center for Scientific Research). His research interests include stochastic modeling of system and structure deterioration, performance assessment models of condition-based maintenance policies, reliability models for probabilistic safety assessment and reliability of safety instrumented systems. He is co-chair of the French National Working Group S3 (“Sûreté, Surveillance, Supervision” – System Safety, Monitoring and Supervision) of the national CNRS research network on control and automation. He is also officer (treasurer) of the European Safety and Reliability Association (ESRA) and actively involved in ESRA Technical Committee on Maintenance Modeling and in the European Safety and Reliability Data Association (ESReDA). He is an editorial board member of *Reliability Engineering and System Safety* and of the *Journal of Risk and Reliability*. He is co-author of a several journal papers and conferences communication on maintenance modeling and systems reliability. His e-mail address is e-mail: [christophe.berenguer@utt.fr](mailto:christophe.berenguer@utt.fr).

**Héctor Cancela** holds a Ph.D. in Computer Science from the University of Rennes 1, INRIA Rennes, France (1996), and a Computer Systems Engineer degree from the Universidad de la República, Uruguay (1990). He is currently Full Professor and Director of the Computer Science Institute at the Engineering School of the Universidad de la República (Uruguay). He is also a Researcher at the National Program for the Development of Basic Sciences (PEDECIBA), Uruguay. His research interests are in operations research techniques, especially in stochastic process models and graph and network models, and in their application jointly with combinatorial optimization metaheuristics to solve different practical problems. He is member of SMAI (Société de Mathématiques Appliquées et Industrielles, France), SIAM (Society for Industrial and Applied Mathematics, USA), AMS (American Mathematical Society, USA), and AUDIIO (Asociación Uruguaya de Informática e Investigación Operativa). He is currently member of IFIP System Modeling and Optimization technical committee (TC7) and President of ALIO, the Latin American Operations Research Association.

**Daejun Chang** (djchang@kaist.edu) is an Associated Professor in the division of ocean systems engineering, Korea Advanced Institute of Science and Technology (KAIST) since 2009. He leads the Offshore Process Engineering Laboratory (OPEL), whose interest is represented by the acronym PRESSED (Process, Risk, Reliability, Economic evaluation, and System Safety) for ocean and process plants. Since he graduated from KAIST in 1997, Dr. Chang has worked with Hyundai Heavy Industries as a leader of development projects, a researcher for ocean system engineering, and an engineer participating in commercial projects. He was the leader of R&D projects to develop revolutionary systems including ocean liquefied natural gas (LNG) production, offshore LNG regasification, the onboard boil-off gas reliquefaction system, pressure swing adsorption for carbon dioxide and VOC recovery, and multiple effect desalination. Dr. Chang has also participated in development projects with internationally recognized industrial leaders: the compressed natural gas carrier with EnerSea, the methanol plantship with StarChem and Lurgi, and the large-size LNG carriers with QatarGas Consortium. His efforts in ocean system engineering have concentrated on risk-based design: fire and explosion risk analysis, quantitative risk assessment, safety system reliability, production availability, and life-cycle cost analysis.

**Kwang Pil Chang** is a senior research engineer of Industrial Research Institute at Hyundai Heavy Industries (Ulsan, Korea). He holds an M.S. in Chemical Engineering from the University of Sung Kyun Kwan (Seoul, Korea) and a CRE (Certified Reliability Engineer) issued from the American Society for Quality (Milwaukee, USA). He has extensive experience in optimization of practical offshore production projects and development of new concept processes based on the reliability analysis and risk analysis. He also participated in development of new concept energy carriers: compressed natural gas carrier, Large liquefied natural gas (LNG) carrier, gas hydrate carrier, and LNG-FPSO. His research areas include production availability analysis, safety integrity level assessment, reliability centered maintenance and risk

assessment. He has especially focused on application of various analysis techniques to improve reliability or risk based design. He has published several papers in international journals and proceedings relating to reliability and risk assessments. He was a visiting researcher of the Department of Production and Quality Engineering in NTNU (Trondheim, Norway). He is currently an associate member of America Society for Quality and a member of an offshore plant committee managed by a state-run organization of Korea. His e-mail address is e-mail: envchang@hhi.co.kr.

**Antoine Despujols** is Expert Research Engineer at Electricité de France (EDF) Research & Development. He graduated from the French engineering school ESIEE and holds an M.S. in electrical engineering from Sherbrooke University (Canada). He has been working on maintenance management methods, especially on nuclear, fossil-fired, and hydraulic power plants. His research interests include maintenance optimization, physical asset management, indicators, benchmarking, obsolescence management, logistic support, modeling, and simulation of maintenance strategies. He is involved in standards working groups in the International Electrotechnical Commission (IEC/TC56) and European Standardization Committee (CEN/TC319) on maintainability, maintenance terminology, and maintenance indicators. He is member of the board of the European Federation of National Maintenance Societies (EFNMS) and of the French Maintenance Association (AFIM). He is also part-time Assistant Professor at Paris 12 University, involved in a Master degree on Maintenance and Industrial Risk Management. His e-mail address is e-mail: antoine.despujols@edf.fr.

**Albert Ferrer** received a B.S. in mathematics from the University of Barcelona, Spain, in 1978 and a Ph.D. in mathematics from the Technological University of Catalonia (UPC), Barcelona, Spain, in 2003. He worked as Assistant Professor in the Department of Geometry and Topology at the University of Barcelona from 1979 to 1981, and as permanent associate teacher in mathematics of Public High School from 1982 to 1993. Since 1993, he is has been permanent Associate Professor in the Department of Applied Mathematics I of the Technical University of Catalonia (UPC). His research fields are abstract convex analysis, non-linear optimization, global optimization, structural reliability, and fuzzy sets. He has published several papers in international journals, books, and proceedings about optimization, electricity generation, and reliability. He is a member of the Modeling and Numerical Optimization Group at the UPC (GNOM) and of the international Working Group on Generalized Convexity (WGGC). His e-mail address is e-mail: alberto.ferrer@upc.edu.

**Lalit Goel** was born in New Delhi, India, in 1960. He obtained his B.Tech. in electrical engineering from the Regional Engineering College, Warangal, India in 1983, and his M.Sc. and Ph.D. in electrical engineering from the University of Saskatchewan, Canada, in 1988 and 1991 respectively. He joined the School of EEE at the Nanyang Technological University (NTU), Singapore, in 1991 where

he is presently a professor of the Division of Power Engineering. He was appointed Dean of Admissions & Financial Aid with effect from July 2008. Dr Goel is a senior member of the IEEE. He received the 1997 & 2002 Teacher of the Year Awards for the School of EEE. Dr Goel served as the Publications Chair of the 1995 IEEE Power PES Energy Management & Power Delivery (EMPD) conference, Organizing Chairman of the 1998 IEEE PES EMPD Conference, Vice-Chairman of the IEEE PES Winter Meeting 2000, Chair of the IEEE PES Powercon2004. He received the IEEE PES Singapore Chapter Outstanding Engineer Award in 2000. He is the Regional Editor for Asia for the *International Journal of Electric Power Systems Research*, and an editorial board member of the *International Journal for Emerging Electric Power Systems*. He is the Chief Editor of the *Institution of Engineers Singapore (IES) Journal C – Power Engineering*. He was the IEEE Singapore Section Chair from 2007 to 2008, and is a R10 PES Chapters Rep since 2005.

**Mala Gosakan** is a Systems Engineer at Alion Science & Technologies MA&D Operation (Boulder, CO). She holds a Masters in Mechanical Engineering from the State University of New York at Buffalo (Buffalo, NY) and a B.Tech. in Mechanical Engineering from Bapatla Engineering College, Nagarjuna University (Bapatla, India). Her research interests include simulation, human performance modeling and analysis. She has five years of experience working on the Improved Performance Research Integration Tool (IMPRINT). IMPRINT is a stochastic network-modeling tool designed to assess the interaction of soldier and system performance throughout the system lifecycle or for specific missions. Her work involves development, testing, and support of the IMPRINT tool. She has five years of experience of working on the maintenance model within IMPRINT. Her e-mail address is e-mail: mgosakan@alionscience.com.

**Abhijit Gosavi** is an Assistant Professor of Engineering Management and Systems Engineering at Missouri University of Science and Technology in Rolla, Missouri, USA. He holds a Ph.D. in Industrial Engineering from the University of South Florida (Tampa, Florida, USA), an M.Tech. in Mechanical Engineering from the Indian Institute of Technology, Madras (India), and a B.E. in Mechanical Engineering from Jadavpur University (Calcutta, India). His research interests include simulation modeling, reinforcement learning, lean manufacturing, engineering metrology, and supply chain modeling. He has published numerous papers in international journals such as *Automatica*, *Management Science*, *INFORMS Journal on Computing*, *Machine Learning*, and *Systems and Control Letters*. He is the author of a book: *Simulation-based Optimization: Parametric Optimization Techniques and Reinforcement Learning* published by Springer in 2003. His research has been funded by the National Science Foundation (USA), Department of Defense (USA), and the industry. Dr. Gosavi's work in this book was supported partially by the National Science Foundation via grant ECS: 0841055. His e-mail address is e-mail: gosavia@mst.edu.

**Antoine Grall** is Professor at the Université de Technologie de Troyes, France. He is currently the head of the Operations research, Applied Statistics and Numerical Simulation department of the University, and is responsible for the option Operational Safety and Environment in the Industrial Systems academic program. He holds a master of Engineering degree (diplôme d'ingénieur) in computer science, an M.S. in systems control and a Ph.D. in Applied Mathematics from the Compiègne University of Technology (UTC, France). He is giving lectures on applied mathematics, maintenance modeling and systems reliability engineering. As a researcher, he is a member of the System Modeling and Dependability Laboratory of the Charles Delaunay Institute (FRE CNRS 2848). His current research interests are mainly in the field of stochastic modeling for maintenance and reliability, condition-based maintenance policies (performance assessment and optimization, maintenance and on-line monitoring, health monitoring), deterioration of systems and structures, reliability models for probabilistic safety assessment (mainly CCF). He has been author or co-author of more than 90 papers in international refereed journals, books, and conference proceedings. His e-mail address is e-mail: antoine.grall@utt.fr.

**Joshua Hester** is a student of Civil Engineering at the Massachusetts Institute of Technology. At MIT, he has worked with the Buehler Group on developing a mesoscale model of alpha helices using molecular dynamics simulations. He has also worked with the MIT Energy Initiative on implementing an email feedback system to generate environmentally-conscious behavior change on MIT's campus. Most recently, he has collaborated with the IN3 of the Open University of Catalonia in Barcelona, Spain. His e-mail address is e-mail: jchester@mit.edu.

**Pierre L'Ecuyer** is Professor in the Département d'Informatique et de Recherche Opérationnelle, at the Université de Montréal, Canada. He holds the Canada Research Chair in Stochastic Simulation and Optimization. He is a member of the CIRRELT and GERAD research centers. His main research interests are random number generation, quasi-Monte Carlo methods, efficiency improvement via variance reduction, sensitivity analysis and optimization of discrete-event stochastic systems, and discrete-event simulation in general. He is currently Associate/Area Editor for *ACM Transactions on Modeling and Computer Simulation*, *ACM Transactions on Mathematical Software*, *Statistics and Computing*, *Management Science*, *International Transactions in Operational Research*, *The Open Applied Mathematics Journal*, and *Cryptography and Communications*. He obtained the E. W. R. Steacie fellowship in 1995–97, and a Killam fellowship in 2001–03; he became an INFORMS Fellow in 2006. His recent research articles are available on-line from his web page: <http://www.iro.umontreal.ca/~lecuyer>.

**Matias Lee** received the Licenciado degree (five-year degree) in computer science from the Facultad de Matemática, Astronomía y Física (FaMAF), Córdoba, Argentina, in 2006. In 2007, he participated in the "INRIA International Internship" program. He was a member of the ARMOR Group, where he worked on Monte

Carlo and quasi-Monte Carlo methods for estimating the reliability of static models. He is currently a Ph.D. student at the FaMAF in Córdoba, Argentina. His Ph.D. thesis is oriented to modeling and analyzing secure reactive systems, where the concept of security is represented by the non-interference property.

**Lawrence Leemis** is a professor in the Department of Mathematics at The College of William & Mary in Williamsburg, Virginia, USA. He received his B.S. and M.S. in mathematics and his Ph.D. in operations research from Purdue University. He has also taught courses at Purdue University, The University of Oklahoma, and Baylor University. He has served as Associate Editor for the *IEEE Transactions on Reliability*, Book Review Editor for the *Journal of Quality Technology*, and an Associate Editor for *Naval Research Logistics*. He has published three books and many research articles. His research and teaching interests are in reliability, simulation, and computational probability.

**Erich Leitgeb** was born in 1964 in Fürstenfeld (Styria, Austria) and received his master degree (Dipl.-Ing. in electrical engineering) at the Technical University of Graz in 1994. From 1982 to 1984 he attended a training to an officer for Communications in the Austrian army, (his current military rank is Major). In 1994 he started research work in Optical Communications and RF at the Department of Communications and Wave Propagation (TU Graz). In February 1999 he received his Ph.D. (Dr. at the University of Technology Graz) with honors. He is currently Associate Professor at the University of Technology Graz. Since January 2000 he is has been project leader of international research projects in the field of optical communications and wireless communications (like COST 270, the EU project SatNEx (a NoE), COST 291, and currently COST IC0802 and SatNEx II). He is giving lectures in Optical Communications Engineering, Antennas and Wave Propagation and Microwaves. In 2002 he had a research stay at the department of Telecommunications at Zagreb University, Croatia and in 2008 at the University of Ljubljana, Slovenia. He is a member of IEEE, SPIE, and WCA. Since 2003 he has reviewed for IEEE and SPIE conferences and journals and he acts as a member of technical committees and as chairperson at these conferences. He was guest editor of a special issue (published 2006) in the *Mediterranean Journal of Electronics and Communications* on “Free Space Optics – RF” and also of a special issue (published 2007) in the *European Microwave Association Journal* of on “RFID technology”. Since 2007 he prepared the international IEEE conference CSNDSP 08 (July 2008) in Graz as local organizer. In May 2009 he was a guest editor on the Special Issue on Radio Frequency Identification (RFID) of *IEEE Transactions on Microwave Theory and Techniques*. In July 2009 he was a guest editor on the Special Issue on RF-Communications in the *Mediterranean Journal of Electronics and Communications* (selected papers from the CSNDSP 08).

**Adriana Marotta** is Assistant Professor at the Computer Science Institute of the University of the Republic of Uruguay since 2003. She received her Ph.D. in Computer Science from the University of the Republic of Uruguay in 2008. She did

three internships at the University of Versailles, France, during her Ph.D. studies. Her research interests and activities mainly focus on Data Quality and Data Warehouse Design and Management. She has taught multiple courses in the area of Information Systems, in particular Data Quality and Data Warehousing courses. Adriana has directed two research projects in the topic of Data Quality, supported by CSIC (Comisión Sectorial de Investigación Científica) of the University of the Republic, and has participated in Latin-American projects (Prosul), Ibero-American projects (CYTED), and a Microsoft Research project in the area of bioinformatics.

**Adamantios Mettas** is the Vice President of ReliaSoft Corporation's product development and theoretical division. He is also a consultant and instructor in the areas of Life Data Analysis, Accelerated Life Testing, Reliability Growth, DOE, Bayesian Statistics and System Reliability and Maintainability and other related subjects. He has been teaching seminars on a variety of Reliability subjects for over 10 years in a variety of industries, including Automotive, Pharmaceutical, Semiconductor, Defense and Aerospace. He fills a critical role in the advancement of ReliaSoft's theoretical research efforts and formulations in all of ReliaSoft's products and has played a key role in the development of ReliaSoft's software including Weibull++, ALTA, RGA and BlockSim. He has published numerous papers on various reliability methods in a variety of international conferences and publications. Mr. Mettas holds an M.S. in Reliability Engineering from the University of Arizona. His e-mail address is [Adamantios.Mettas@ReliaSoft.com](mailto:Adamantios.Mettas@ReliaSoft.com).

**Susan Murray** is an Associate Professor of Engineering Management and Systems Engineering at Missouri University of Science and Technology (Missouri S&T). She holds a Ph.D. in Industrial Engineering from Texas A&M University, a M.S. in Industrial Engineering from University of Texas at Arlington, and a B.S. in Industrial Engineering also from Texas A&M University. Her research interests include human systems integration, safety engineering, human performance modeling, and engineering education. Dr. Murray has published several papers in international journals and proceedings about human performance modeling, work design, and related areas. She teaches courses on human factors, safety engineering, and engineering management. Prior to joining academia she worked in the aerospace industry, including two years at NASA's Kennedy Space Center. She is a licensed professional engineer in Texas, USA. Her e-mail address is e-mail: [murray@mst.edu](mailto:murray@mst.edu).

**Farukh Nadeem** obtained his M.Sc. (Electronics) and M.Phil. (Electronics) in 1994 and 1996 from Quaid-e-Azam University Islamabad, Pakistan. His current field of interest is the intelligent switching of Free Space Optical / RF communication links, a field in which he has pursued a Ph.D. since February 2007. He has been the author or coauthor of more than 25 IEEE conference publications. He is actively participating in international projects, such as SatNEx (a network of excellence with work package on "clear sky optics"), ESA project (feasibility assessment of optical technologies & techniques for reliable high capacity feeder links), and COST action

IC0802 (propagation tools and data for integrated telecommunication, navigation and earth observation systems).

**Nicola Pedroni** is a Ph.D. candidate in Radiation Science and Technology at the Politecnico di Milano (Milano, Italy). He holds a B.S. in Energetic Engineering (2003) and an M.Sc. in Nuclear Engineering (2005), both from the Politecnico di Milano. He graduated with honors, ranking first in his class. His undergraduate thesis applied advanced computational intelligence methods (e.g., multi-objective genetic algorithms and neural networks) to the selection of monitored plant parameters relevant to nuclear power plant fault diagnosis. He has been a research assistant at the Laboratorio di Analisi di Segnale ed Analisi di Rischio (LASAR) of the Nuclear Engineering Department of the Politecnico di Milano (2006). He has also been a visiting student at the Department of Nuclear Science and Engineering of the Massachusetts Institute of Technology (September 2008–May 2009). His current research concerns the study and development of advanced Monte Carlo simulation methods for uncertainty and sensitivity analysis of physical-mathematical models of complex safety-critical engineered systems. He is co-author of about 10 papers on international journals, seven papers on proceedings of international conferences and two chapters in international books.

**Verónica Peralta** is an Associate Professor of Computer Science at the University of Tours (France). She also collaborates as an assistant professor at the University of the Republic (Uruguay). She holds a Ph.D. in Computer Science from the University of Versailles (France) and the University of the Republic (Uruguay) and an M.S. in Computer Science from University of the Republic (Uruguay). She has extended experience in teaching at the University of the Republic (Uruguay), University of Tours (France), University of Versailles (France), and University of Buenos Aires (Argentina). Her research interests include quality of data, quality of service, query personalization, data warehousing and OLAP, especially in the context of autonomous, heterogeneous, and distributed information systems. She has published several papers in journals and proceedings about information systems and worked in many research projects in collaboration with Uruguayan, Brazilian, and French universities. Similarly, she has taught many courses about data warehousing, data quality, and decision making, and she has been the academic advisor of several students finishing their master thesis. Her e-mail address is e-mail: [veronika.peralta@univ-tours.fr](mailto:veronika.peralta@univ-tours.fr).

**K. Durga Rao** works at Paul Scherrer Institut, Switzerland. He graduated in Electrical and Electronics Engineering from the Nagarjuna University, India, and holds an M.Tech. and a Ph.D. in Reliability Engineering from the Indian Institute of Technology Kharagpur and Bombay respectively. He was with Bhabha Atomic Research Center as a scientist during 2002–2008. He has been actively involved in Dynamic PSA, uncertainty analysis, and risk-informed decision making. He has published over 30 papers in journals and conference proceedings. His e-mail address is e-mail: [durga.karanki@psi.ch](mailto:durga.karanki@psi.ch).

**V.V.S. Sanyasi Rao** has worked at Bhabha Atomic Research Centre (Mumbai, India) for the last 35 years. He obtained his Ph.D. in Physics, in the field of Probabilistic Safety Analysis, from Mumbai University, Mumbai, India. He has extensively worked in the area of reliability engineering with emphasis on application to reactor systems, probabilistic safety analysis of Indian nuclear power plants. He has published a number of papers in international journals, and presented papers at various National and International Conferences. His e-mail address is e-mail: [vvssrao@barc.gov.in](mailto:vvssrao@barc.gov.in).

**Gerardo Rubino** is Senior Researcher at INRIA, at the INRIA Rennes–Bretagne Atlantique Center, France. He has also been Full Professor at the Telecom Bretagne engineering school in Rennes, France, in the period 1995–2000. He is the leader of the DIONYSOS team in analysis and design of telecommunication networks (former ARMOR team). He has been Scientific Director at the INRIA Rennes–Bretagne Atlantique Center for four years. His main research areas are in stochastic modeling, and in Quality of Experience analysis. In the former area, he has worked many years in different Operations Research topics (he has been Associate Editor of the *Naval Research Logistics Journal* for ten 10 years) and, in particular, in simulation methods for rare event analysis. He has co-edited a book entitled *Rare Event Simulation Using Monte Carlo Methods* (published by John Wiley & Sons in 2009), and organized several events on rare event simulation. He is currently member of the IFIP WG 7.3 in performance evaluation.

**Raul Ruggia** is a computer engineer (University of the Republic – Uruguay) and received his Ph.D. in Computer Science from the University of Paris VI (France). He works as Professor at the Computer Science Department of the University of the Republic of Uruguay, where he lectures on information systems, supervises graduate students, and currently directs research projects on data quality management, bio-informatics, and interoperability. Formerly, he worked on design tools and data warehousing areas, participating in Latin-American projects (Prosul), Ibero-American projects (CYTED), and European projects (UE@LIS program). He has also supervised technological projects on environmental and telecommunications domains joint with Uruguayan government agencies.

**Carles Serrat** is an Associate Professor of Applied Mathematics at the UPC – Catalonia Tech University in Barcelona, Spain. He holds a Ph.D. in Mathematics from the UPC – Catalonia Tech University. His teaching activities include Mathematics, Applied Statistics, Quantitative Analysis Techniques and Longitudinal Data Analysis at undergraduate and postgraduate programs. He also collaborates with the Open University of Catalonia (Barcelona, Spain) as an e-learning consultant. His research areas of interest are related with statistical analyses and methodologies and their applications to different fields, in particular to public health / medicine, food sciences, building construction; survival/reliability analysis, longitudinal data analysis, missing data analysis, and simulation techniques are included in their topics of interest. He has published several papers in international journals, books, and pro-

ceedings about survival/reliability analysis and its applications. He is acting as a referee for international journals such as *Statistical Modeling*, *International Journal of Statistics and Management Systems*, *Statistics and Operation Research Transactions*, *Estadística Española*, and *Medicina Clínica*. At this moment, He is currently the Director of the Institute of Statistics and Mathematics Applied to the Building Construction (<http://iema.upc.edu>) and Vice-Director of Research, Innovation and Mobility at the School of Building Construction of Barcelona (EPSEB-UPC). His e-mail address is e-mail: [carles.serrat@upc.edu](mailto:carles.serrat@upc.edu).

**Aijaz Shaikh** is a Research Scientist at ReliaSoft Corporation's worldwide headquarters in Tucson, USA. He is closely involved in the development of a majority of ReliaSoft's software applications and has worked on several consulting projects. He is the author of ReliaSoft's *Experiment Design and Analysis Reference* and coauthor of the *System Analysis Reference*. He has also authored several articles on the subjects of design for reliability, life data analysis, accelerated life testing, design of experiments and repairable systems analysis. His research interests include reliability and availability analysis of industrial systems, design of experiments, multibody dynamics, and finite element analysis. He holds an M.S. degree in Mechanical Engineering from the University of Arizona and is an ASQ Certified Reliability Engineer. He is also a member of ASME, SPE, and SRE. His email addresses are e-mail: [aijaz.shaikh@reliasoft.com](mailto:aijaz.shaikh@reliasoft.com) and [aij.rel@gmail.com](mailto:aij.rel@gmail.com).

**A. Srividya** is Professor in Civil Engineering, IIT Bombay. She has published over 130 research papers in journals and conferences and has been on the editorial board and as a guest editor of various international journals. She specializes in the area of TQM and reliability based optimal design for structures. Her e-mail address is e-mail: [asvidya@civil.iitb.ac.in](mailto:asvidya@civil.iitb.ac.in).

**Bruno Tuffin** received his Ph.D. in applied mathematics from the University of Rennes 1 (France) in 1997. Since then, he has been with INRIA in Rennes. He spent 8 months as a postdoc at Duke University in 1999. His research interests include developing Monte Carlo and quasi-Monte Carlo simulation techniques for the performance evaluation of telecommunication systems, and developing new Internet-pricing schemes. He is currently Associate Editor for *INFORMS Journal on Computing*, *ACM Transactions on Modeling and Computer Simulation* and *Mathematical Methods of Operations Research*. He has co-edited a book entitled *Rare Event Simulation Using Monte Carlo Methods* (published by John Wiley & Sons in 2009), and organized several events on rare event simulation. More information can be found on his web page at [http://www.irisa.fr/dionysos/pages\\_perso/tuffin/Tuffin\\_en.htm](http://www.irisa.fr/dionysos/pages_perso/tuffin/Tuffin_en.htm).

**A. K. Verma** is Professor in Electrical Engineering, IIT Bombay. He has published around 180 papers in journals and conference proceedings. He is the EIC of OPSEARCH and on the editorial board of various international journals. He has been a guest editor of *IJRQSE*, *IJPE*, *CDQM*, *IJAC*, etc and others, and has super-

vised 23 Ph.D.s. His area of research is Reliability and Maintainability Engineering. His e-mail address is e-mail: akv@ee.iitb.ac.in.

**Peng Wang** received his B.Sc. from Xian Jiaotong University, China, in 1978, and his M.Sc. and Ph.D. from the University of Saskatchewan, Canada, in 1995 and 1998 respectively. Currently, he is an associate professor of the School of EEE at Nanyang Technological University, Singapore. His research areas include power system planning and operation, reliability engineering, renewable energy conversion techniques, micro-grid and intelligent power distribution system. He has been involved in many research projects on power system, zero energy plants and buildings, micro grid design, and intelligent power distribution systems.

**Valérie Zille** is currently an R&D Ph.D. engineer, working in the nuclear industry. She holds a masters of Engineering degree in Industrial Systems at the Université de Technologie de Troyes (UTT, France), and a Ph.D. in Systems Optimisation and Security. Her Ph.D. is entitled “Modelling and Simulation of Complex Maintenance policies for multi-component systems” and she has prepared it within a collaboration between the Charles Delaunay Institute (System Modeling and Dependability Laboratory) of the UTT and the Industrial Risk Management Department of EDF R&D. During her studies, her main research interests were focused on methods and tools for dependability assessments such as Petri Nets, Ant algorithms and Monte Carlo simulation. She has been co-author of a few papers related to her works in international refereed journals (*Reliability Engineering and System Safety*, *Quality Technology and Quantitative Management*) and conference proceedings and she has made some presentations during international conferences (ESREL, Maintenance Management) and workshops (ESREDA). Her e-mail address is e-mail: zilleva@gmail.com.

**Enrico Zio** (Ph.D. in Nuclear Engineering, Politecnico di Milano, 1995; Ph.D. in Nuclear Engineering, MIT, 1998) is Director of the Graduate School of the Politecnico di Milano, and full professor of Computational Methods for Safety and Risk Analysis. He has served as Vice-Chairman of the European Safety and Reliability Association, ESRA (2000–2005) and as Editor-in-Chief of the international journal *Risk, Decision and Policy* (2003–2004). He is currently the Chairman of the Italian Chapter of the IEEE Reliability Society (2001–). He is a member of the editorial board of the international scientific journals *Reliability Engineering and System Safety*, *Journal of Risk and Reliability*, *Journal of Science and Technology of Nuclear Installations*, plus a number of others in the nuclear energy field. His research topics are: analysis of the reliability, safety and security of complex systems under stationary and dynamic operation, particularly by Monte Carlo simulation methods; development of soft computing techniques (neural networks, fuzzy logic, genetic algorithms) for safety, reliability, and maintenance applications, system monitoring, fault diagnosis and prognosis, and optimal design. He is co-author of three international books and more than 100 papers on international journals, and serves as a referee of more than 10 international journals.
