

Index

A

ACP coding, 9, 71–72, 74, 79–80, 92, 125
Association between a pair of items, 55, 58
Association rule mining in multiple databases,
4, 16–19, 22–26

C

Clustering databases, 99–100, 106, 108,
110–113, 116, 125
Coding association rules, 76–80
Coding frequent itemsets, 79, 81, 86, 89–90,
114–115, 119, 125–126

D

Data preparation for multi-database mining,
15, 19–20, 54, 123

E

Exceptional association rule, 9, 15, 18, 27,
31, 34

F

Framework for developing multi-database
mining applications, 121

G

Grouping, 9, 51, 58

H

Heavy association rule, 9, 18, 21–34, 123
High frequency association rule, 18, 25, 27,
32, 34, 40

I

IS coding, 95, 114, 119, 126

L

Local pattern analysis, 5–6, 8–9, 19–20, 39,
45, 49, 52–53, 59, 71–72, 98, 122–125

M

Multi-database mining (MDM), 1–3, 5–6,
8–11, 18, 20, 34, 37–45, 55, 69, 71–93, 98
Multi-database mining applications, 1, 3, 7–8,
39, 71–72, 74, 121–127

O

Overall association, 9, 51, 55, 58, 61–63, 65,
67, 69

P

Pipelined feedback model (PFM), 37–38,
43–45, 51, 123–124

Q

Quality of synthesized knowledge, 9, 71, 90

S

Select items, 9, 42, 51–52, 124
Similarity between a pair of databases, 10,
96–97, 100–101, 117
Space efficient representation of local
association rules, 76–77, 79–80
Space efficient representation of local frequent
itemsets, 114–115
Synthesis of patterns, 22, 44, 124
