

Local Terms and Expressions Used

- **Bund:** literally in the Urdu language this means a dike, usually made of earth, to check a water stream. Contrary to a dam, a bund is a small structure made to divert a stream on to agricultural fields for irrigation purposes; to save river bank areas from flooding; or to store water for multiple uses, such as domestic, live-stock, and irrigation.
- **Farm Size:** By farm size, we mean the area of holding irrespective of its location contiguously or fragmentally.
- **Karez:** An underground water conveyance system from one or several mother wells dug at the foothills to lowlands over a distance of several hundred meters. Karezes are the typical means of irrigation in the dry mountainous zones of Balochistan province of Pakistan. Being underground, the karezes help reduce water loss through evaporation.
- **Kharif Season:** Summer to autumn season – May to October in Pakistan.
- **Kharif Crops:** Crops grown in kharif season – such as maize, rice, melons.
- **Khushkaba Farming:** Dry farming, i.e. farming under direct precipitation only.
- **Load-shedding:** Breakdown of electric supply.
- **Lora:** A rainwater stream flowing downslope from highlands. The word is derived from a Pashto language word 'Lwarha', which means 'height'.
- **Nala:** A small rainwater stream; a sewerage drain; or any other small water channel.
- **Patwar Circle (PC):** The total land revenue area, comprising several villages, under one patwari, who is a revenue official at field level in charge of maintaining land records, conducting property transactions, surveying crops, and collecting revenue.
- **Rabi Crops:** Crops grown during rabi season – such as wheat, barley, cumin.
- **Rabi Season:** Winter to spring season – November to April in Pakistan.
- **Sailaba Farming:** Urdu translation for the word 'flood' is 'sailab'. Sailaba farming is similar to spate farming (or spate irrigation) with a minor difference, and that is, in the latter, flood water is diverted to crops by large dikes across hill torrents;

in the former, small guide structures are constructed on hill slopes to divert rain-water from other fallow areas to cropped fields.

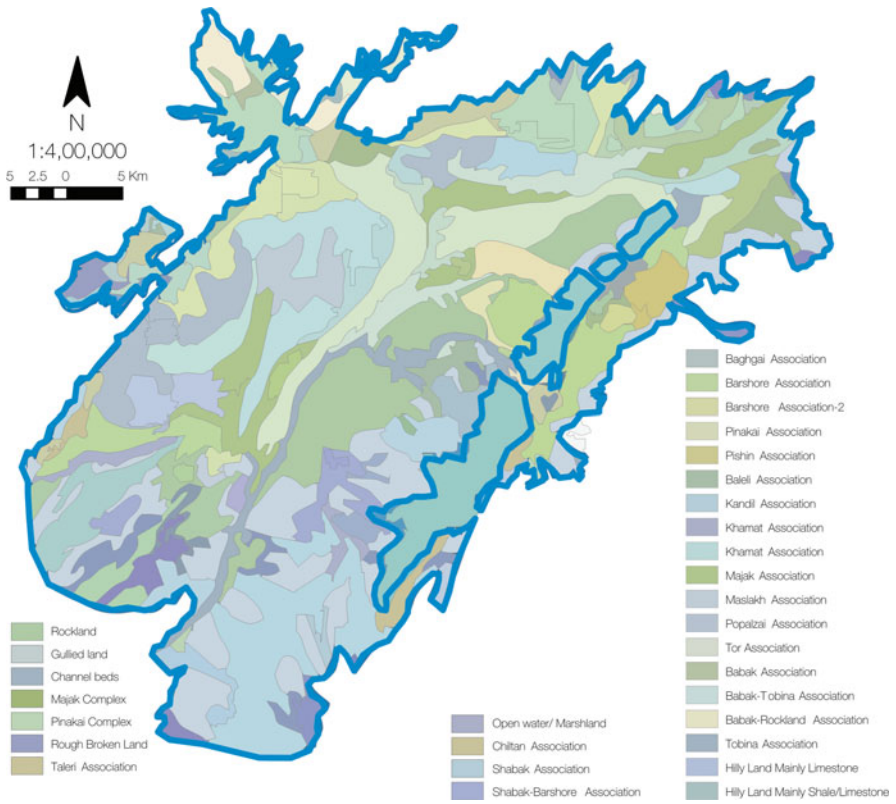

- **Shamilat:** Common lands of a village or tribe.
- **Tehsil:** The second-order administrative subdivision of a district.
- **Union Council (UC):** The lowest political unit comprising a few (four to five) villages. In the Devolution of Power Plan, 2001, a UC was supposed to be politically represented by an elected body of several members headed by a UC nazim (nazim means 'administrator' in local language).
- **Village:** A demarcated rural landscape of a population less than 5,000 for which separate revenue records, including a cadastral map, is maintained.

Appendix F: Questionnaire A: Farmers

Topic: - Inter-Effects of Tubewell Irrigated Agriculture and the Aquifer Potential in Balochistan: Case Study of Pishin Valley, 1981-2008.

File No. _____ Date _____ Interviewer _____ Respondent (name, age) _____

Village _____ UC/PC _____ Tehsil _____ District _____

1. Household Information

Family size _____ No. of fulltime farmers _____ Farmers' education _____ Nonfarm Occupations _____

Farm share in income: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

2. Land use (acres)

Total holding: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

Under irrigated cultivation: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

Under dy cultivation: 2008 _____ 20054 _____ 2001 _____ 1991 _____ 1981 _____

Cultivable-waste land: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

Cultivated land deserted _____ Since the year _____ Why: 1 _____ 2 _____

Use of the deserted land _____ Average year fallow (% of under cultivation): Kharif season _____

Rabi season _____ from when fallowing practiced _____ Why fallowing: 1 _____ 2 _____

Avg. year % land intercropped: Kharif _____ Rabi _____ Crops involved: Kharif _____ Rabi _____

3. Water Availability

Tubewells owned: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

Tubewells dried: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

Bore depth (ft): 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

Watertable depth: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

Did the nearest DAD raised watertable: Yes / No; Other uses of DAD _____

4. Water Quality

For humans –good/fair/poor: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

For laundry –good/fair/poor: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

For irrigation –good /fair/ poor: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

Salt colour on surface: Yes / No; Effects on crops _____

5. Irrigation cost

Bore + casing cost: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

Motor horsepower: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

Motor price: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

Monthly O & M cost: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

6. Irrigation Technology

No. of alive tubewells _____ subsidized _____ Distance of nearest tubewell _____ Does govt check new

boring: Yes / No; How many your tubewells are licensed _____ permitted motor power _____ Daily operation

(hrs): Kharif _____ Rabi _____ Do you sell water to non-owner farmers: Yes / No; Do you use HEIS: Yes /

No; If yes, type: Drip / Bubbler; Installation year _____ Who funded _____ HEIS effect on production:

increased / decreased / no change; Crops & area served by HEIS _____ If HEIS not used, Why: _____

Water tank lined: Yes / No; % of lined watercourses _____ % of piped watercourses _____ Who funded _____

7. Farm-Income (annual average per acre)

Gross income: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

Net income: 2008 _____ 2004 _____ 2001 _____ 1991 _____ 1981 _____

8. Cropping Pattern

Principle crops (% of area): Kharif _____ Rabi _____

Water scarcity driven cropping change: Kharif _____ Rabi _____

Does govt. check crop selection: Yes/ No; If yes, which crops restricted _____

Does govt. give incentives for certain crops: Yes/ No, If yes, which crops _____ Which incentives _____

Have you been invited to training on crops selection: Yes / No; If yes, how many you attended _____

Name the training agencies _____

9. Views About the ‘Flat Rate Policy’ in Electricity Tariff

1. Is the Flat Rates Policy causing water overuse: Yes/ No

2. Should Govt. drop the Flat Rate Policy: Yes/ No

3. How would you react if the Policy is dropped: i) Not mind ii) Protest unconditional

Demand alternatives , like _____

4. What you may do if had to pay full electricity bill: i) Continue with electric motor

ii) Change to diesel machine iii) Change to rain farming iv) Abandon farming

5. Is the current Flat Rate of electricity is: High / Fair / Low; Justify answer _____

10. Respondent’s Suggestions for Water Conservation: _____

Interviewer’s Signature _____ Respondent’s Signature _____

Abbreviations and Local terms

DAD: Delay Action Dam

HEIS: High Efficiency Irrigation Systems

Kharif crops: Summer season crops

Rabi crops: Winter season crops

Appendix G: Questionnaire B: Key Informants

Topic: Inter-Effects of Tubewell Irrigated Agriculture and the Aquifer Potential in Balochistan: Case Study of Pishin Valley, 1981-2008.

File No. _____ Date _____ Informant's name _____ Designation _____

Department _____

Instructions: Please tick one box affront each answer.

- 0 Shows: not agreed / not significant/ or untrue
- 1 Shows: highly agreed / highly significant/ highly true
- 2 Shows: moderate or fair agreement/ significance/ truth
- 3 Shows: slight agreement/ significance/ truth

Note: If applicable, a same level of agreement/ significance may be marked for several answers.

A- Agricultural Development

1. Why are there vast extents of cultivable land barren in Pishin Valley?

- i. Lack of irrigation water: 0 1 2 3
- ii. Abundance of land disputes:..... 0 1 2 3
- iii. Lack of population/ laborers:..... 0 1 2 3
- iv. Lack of interest of owners: 0 1 2 3
- v. Poverty of owners:..... 0 1 2 3
- vi. Abundance of state lands: 0 1 2 3
- vii. Any other reason: _____

2. What do you suggest for sustainable agriculture (social, economic, ecologic) in the area?

- i. Control groundwater abstraction by tubewell licensing: 0 1 2 3
- ii. Subsidized provision of HEIS: 0 1 2 3
- iii. Emphasis on intercropping: 0 1 2 3
- iv. Adoption of low delta crops:..... 0 1 2 3
- v. Protection/development of recharge zones in watershed: 0 1 2 3
- vi. Emphasis on traditional Sailaba & Khushkaba farming: 0 1 2 3
- vii. Any other suggestion: _____

3. Which changes water shortage has brought in cropping pattern?

- i. Shift from orchards to field-crops: 0 1 2 3
- ii. Shift from low value crops to high value crops:..... 0 1 2 3
- iii. Shift from high delta crops to low delta crops: 0 1 2 3
- iv. Any other change: _____

4. Which steps govt. taking to popularize low delta crops?

- i. Restricts cultivation of high delta crops:.....

0	1	2	3
---	---	---	---
- ii. Subsidizes seeds, etc. of low delta crops:.....

0	1	2	3
---	---	---	---
- iii. Trains and educate farmers for low delta crops:.....

0	1	2	3
---	---	---	---
- iv. Increases support price for low delta crops:.....

0	1	2	3
---	---	---	---
- v. Provides special marketing for low delta crops:....

0	1	2	3
---	---	---	---
- vi. Any other step: _____

B- Aquifer Issues

5. What are reasons for the quicker watertable decline in Pishin Valley?

- i. Precipitation reduction due to climate change:

0	1	2	3
---	---	---	---
- ii. Elimination of recharge zones by settlements expansion:

0	1	2	3
---	---	---	---
- iii. Enormous development of tubewell farming:

0	1	2	3
---	---	---	---
- iv. Misuse of water in irrigation system:

0	1	2	3
---	---	---	---
- v. Any other reason: _____

6. What do you suggest to avert quick fall of watertable?

- i. Change from agriculture to industry or else less water intensive landuse:

0	1	2	3
---	---	---	---
- ii. Construction of more DADs & other recharge structures:

0	1	2	3
---	---	---	---
- iii. Use of HEIS and better irrigation scheduling:

0	1	2	3
---	---	---	---
- iv. Complete ban on further boring for irrigation use.....

0	1	2	3
---	---	---	---
- v. Any other suggestion: _____

C- Water Management Strategies

7. What impedes enforcement of groundwater regulations?

- i. Lack of political will

0	1	2	3
---	---	---	---
- ii. Poor accessibility of the area.....

0	1	2	3
---	---	---	---
- iii. Weakness of enforcing agencies.....

0	1	2	3
---	---	---	---
- iv. Corruption on the part of enforcing agencies.....

0	1	2	3
---	---	---	---
- v. Inadequacy of the regulations:.....

0	1	2	3
---	---	---	---
- vi. Any other reason: _____

8. Have Delay Action Dams proved useful as deemed? Yes No . ----If yes, how?

- i. Much effective in long duration aquifer recharge:

0	1	2	3
---	---	---	---

5

- ii. Much effective in short term aquifer recharge:....

0	1	2	3
---	---	---	---

5

- iii. Marginally effective in aquifer recharge:

0	1	2	3
---	---	---	---

5

- iv. Effective in flood control:.....

0	1	2	3
---	---	---	---

5

- v. Useful as non irrigational water uses:

0	1	2	3
---	---	---	---

5

- vi. Any other benefits: _____

9. It was how where the DADs failed to come up to expectations?

- i. Quick sedimentation:

0	1	2
---	---	---
- ii. Choking of subsurface pores quickly:

0	1	2
---	---	---
- iii. Any other shortfall: _____

10. What constrains adoption of High Efficiency Irrigation Systems?

- i. High operation & maintenance cost:

0	1	2	3
---	---	---	---
- ii. Lower production than flood irrigation:.....

0	1	2	3
---	---	---	---
- iii. Availability issues of the system & spare parts:

0	1	2	3
---	---	---	---
- iv. Lack of consciousness for water conservation:

0	1	2	3
---	---	---	---
- v. Lack of skill in using HEIS:

0	1	2	3
---	---	---	---
- vi. Cheap availability of water for flood irrigation due to FRP:

0	1	2	3
---	---	---	---
- vii. Any other constraint: _____

11. What do you suggest to make High Efficiency Irrigation Systems popular?

- i. Subsidized supply of HEIS:

0	1	2	3
---	---	---	---
- ii. Withdrawal of the Flat Rates Policy:

0	1	2	3
---	---	---	---
- iii. Making use of HEIS a condition for power subsidy:

0	1	2	3
---	---	---	---
- iv. Any other suggestion: _____

12. Do you think the F R P. is the cause of water misuse? Yes No

13. Do you support dropping FRP? Yes No . If no, why _____

14. Which motives drive the Flat Rates Policy?

- i. Vested interests of decision makers:.....

0	1	2	3
---	---	---	---
- ii. Fear of public resentment against dropping FRP:.....

0	1	2	3
---	---	---	---
- iii. WAPDA's inabilities in thefts checking & bill collection:

0	1	2	3
---	---	---	---
- iv. Farmers' welfare; to reduce their irrigation cost:

0	1	2	3
---	---	---	---
- v. Any other motive: _____

15. Do you think dropping FRP may cause public resentment? Yes No --If yes, how? _____

16. Suggest socially / politically acceptable alternatives/ modifications in the FRP: _____

17. Informant's open note on the subject issues: _____

Interviewer's signature: _____ **Informant's signature:** _____
