

Index

A

- Almost everywhere, 35
- Approximation space, 86, 88–90, 95, 99–101, 197, 225, 238, 254, 274, 280, 294, 301, 314, 318, 330, 335, 343, 347
- Assembly procedure, 251, 254, 255, 264, 275, 288, 289, 291, 304, 306, 308, 309
 - edge effects, 267

B

- Banach space, 7–13
 - closed subspace, 13
 - definition, 8
 - examples, 9–12
 - properties, 13
- Basis, 20
 - dual, 21
- Basis functions, 86, 89, 95, 172
 - canonical, 96
- Beam
 - doubly clamped, 292–311
 - in bending, 271–291
 - in traction, 252–270
 - elastic support, 255, 268
- Bending moment, 272, 276, 293, 298
- Biharmonic operator, 235
- Bilinear form, 14, 88
 - Riesz theorem, 55
- Boundary condition
 - Dirichlet, 64, 67, 68, 77, 116, 118, 162, 279, 347
 - homogeneous, 75, 83, 166, 192, 225, 334, 339
 - inhomogeneous, 74

- elliptical, 113–159
- Fourier, 192, 200
- Fourier–Dirichlet, 189
- mixed, 113–126
- Neumann, 77, 78, 176, 279, 316, 333, 334, 342
 - homogeneous, 179, 188
 - periodic, 202, 205
- Bramble–Hilbert lemma, 94, 245, 353
- Burgers equation, 313–329

C

- Cauchy sequence, 7
- Cauchy–Schwarz inequality, 16, 36
- Céa’s lemma, 92
- Clamped plate, 235, 250
- Classical solution, 65
- Closed set, 13
- Coercivity, 55, 119, 131
- Completeness, 8
- Constitutive law, 222, 253, 272, 293, 299
- Continuous bilinear map, 14
- Continuous linear map, 13
- Continuous problem, 5, 75, 77
 - beam in bending, 272, 277, 279
 - beam in traction, 253
 - clamped plate, 235
 - displacement, 215, 224
 - doubly clamped beam, 293, 299
 - elastic solid, 213
 - heat conduction, 127
 - heat transfer, 113
 - incompressible fluid, 145
 - integro-differential equation, 330, 334
 - relation with variational problem, 6, 66, 79–84, 124, 133, 157, 161, 181, 196

Riccati equation, 343
 viscous fluid, 313
 Contravariant components, 21
 Convection–advection coupling, 317, 318
 Convergence, 4, 8
 in $\mathcal{D}(\Omega)$, 28
 of distributions, 31
 of finite-element method, 91–94
 Convex set, 17
 closed, 18
 Covariant components, 21
 Crank–Nicolson method, 329

D

Density argument, 81, 140, 182, 278, 299
 Density theorem, 36
 Differential system, 314, 316, 327
 nonlinear, 320, 324
 time domain, 319
 Diminish problem, 3
 Dirac distribution, 30
 Dirichlet problem, 162–175
 Displacement field, 3, 213–215, 221, 223,
 269, 271, 273, 292, 310
 virtual, 252, 272, 276, 293, 298
 Distribution
 continuity, 29
 convergence, 31
 definition, 29
 differentiation, 31
 Distribution theory, 19–34, 82
 Dual space, 21

E

Einstein summation convention, 21
 Elasticity, 3, 66, 213, 235, 271, 292
 Elastostatic problem, 213, 298
 Equivalence of norms, 49, 71, 148
 Estimation, 4, 7, 56, 71, 75, 123, 142
 Euler–Bernoulli theory, 292–311
 Existence of solutions, 3, 61, 68, 114, 121,
 133, 137, 153
 Extension theorem, 43
 External forces, 252, 276, 293, 298

F

Finite-difference method, 161, 174, 186,
 188, 200, 209, 211, 230, 250, 268,
 283, 284, 315, 316, 333, 339, 342,
 344, 350, 352
 space-domain discretization, 323, 326

 time domain discretization, 316
 Finite-element method
 1D, 96
 2D, 98
 3D, 107
 approximation process, 85
 convergence, 91–94
 description, 95
 general, 91
 Hermite, 98, 294, 302, 310
 Lagrange, 89
 P_0 , 96, 98
 P_1 , 96, 99, 163, 176, 216, 225, 237, 254,
 273, 314, 330, 343, 347
 P_2 , 97, 100
 P_3 , 101
 Q_1 , 105
 Q_2 , 106
 Fluid, 313
 incompressible, 144–159
 Force field, 145
 Fourier–Dirichlet problem, 189–201

G

Galerkin’s method, 85, 87, 88
 Green’s theorem, 43, 45, 67, 135, 221
 for Laplacian, 54
 Green–Ostrogradski formula, 145, 150

H

Hadamard well-posed problem, 4
 Heat conduction, 127–143
 Heat transfer, 113–126
 Hilbert space, 15–18
 $H_0^1(\Omega)$, 46
 $H^2(\Omega)$, 51
 $L^2(\Omega)$, 35
 closed vector subspaces, 17
 convex subsets, 17
 definition, 16
 square-integrable functions, 17
 Hooke’s law, 223
 Hyperbolic PDE, 317

I

Incompressible fluid, 144–159
 Integral equation, 278, 279
 Integrodifferential equation, 330–342
 Internal forces, 252, 276, 293, 298

K

Kronecker delta, 21

L

Lamé parameters, 213

Landau notation, 94

Laplace–Dirichlet problem, 64, 226

homogeneous, 68

inhomogeneous, 74

Laplace–Neumann–Dirichlet problem, 77

Laplacian, 65, 74

Lax–Milgram theorem, 56

application, 69, 71, 74, 78, 79, 92, 121,
133, 137, 139, 153, 161, 166, 167, 180,
193, 195, 223, 242

Linear form, 21, 88

Riesz theorem, 55

Linear system, 87, 217, 239, 247, 249, 251,
254, 262–264, 267, 269, 274, 285,
289, 295, 296, 306, 310, 311

M

Measure zero, 35, 65

Mesh, 85

cubic, 107

geometry, 90, 95

quadrilateral, 104

square, 107

triangular, 90, 98, 216, 237

Minimisation problem, 7, 54

approximate, 274, 281, 282, 285, 295,
304

beam in bending, 273, 280

beam in traction, 253, 254, 269

doubly clamped beam, 294, 301

elastic solid, 223

relation with variational problem, 59, 73,
123, 155, 223, 273, 294

Moment of inertia, 272, 293

N

Navier equation, 215, 223, 229

Navier–Stokes equation, 313

Neumann problem, 176–188

Newton’s method, 348

Node, 90, 96

Node equation, 161, 164, 184, 186–188, 199,
200, 209, 210, 229, 232, 249, 268,
283, 285, 315, 322, 323, 327, 332,
333, 336, 338, 341, 344, 345, 350,
352

Nonlinearity, 317–319, 334, 335, 348

Norm

L^2 , 4, 11

equivalence, 49, 71, 148

from scalar product, 16

uniform convergence, 4

Normed vector space, 7

O

Orthogonal projection, 18

P

Periodic problem, 202–211

Petree–Tartar lemma, 51

Poincaré inequality, 47, 70

generalised, 51

Poisson coefficient, 252, 271, 292

Poisson’s equation, 64, 65, 84

Potential energy, 274

Pressure field, 149

R

Regular distribution, 27

continuity, 27

Regularity, 4, 64, 161, 168, 192, 207, 339,
340, 346

Rellich’s theorem, 42

Riccati equation, 343–353

Riesz’s theorem, 55, 154

Rigidity matrix, 275, 290, 291

Rolle’s theorem, 302

S

Scalar product, 15

induced norm, 16

Schwartz, L., 20

Shear force, 272, 276

Simpson’s rule, 296, 305, 306

Sobolev injection theorem, 36, 347

Sobolev spaces, 34–54

Space $H^1(\Omega)$, 37

properties, 39

Space $H_0^1(\Omega)$, 45

Space $H^2(\Omega)$, 51

Space $L^2(\Omega)$, 35

Space $\mathcal{D}'(\Omega)$, 29

Space $\mathcal{D}(\Omega)$, 24

convergence in, 28

density in $L^2(\Omega)$, 36

uniform convergence in, 28
 Stampacchia's theorem, 55, 56, 73, 155
 Stokes's equations, 144
 Strain tensor, 214, 221–223, 276
 linear, 224, 252, 293
 Stress tensor, 214, 221–223, 252, 293
 Stress–strain problem, 213–234
 Strong formulation, 3, 5, 79, 161
 Surface force, 252, 272, 293

T

Taylor expansion, 85, 174, 186, 188, 200,
 229, 233, 284, 323, 326, 339, 342,
 350
 Temperature field, 113, 128
 Test function, 66, 86
 Trace map, 43, 132
 Trace of a function, 42, 183
 Trace theorem, 42, 52, 78, 130, 131
 Transverse force, 3, 66, 292
 Trapezoidal rule, 164

U

Uniform convergence, 4, 9
 in $\mathcal{D}(\Omega)$, 28
 Uniformly distributed load, 296, 306
 Uniqueness of solution, 4, 56, 61, 68, 73,
 114, 121, 133, 137, 153
 Unisolvence, 90, 91

V

V -ellipticity, *see* Coercivity
 Variational problem, 6, 54, 66, 69, 71
 a priori estimation, 56

approximate, 85, 87–91, 161, 172, 183,
 197, 208, 217, 226, 238, 310, 314, 318,
 331, 335, 343, 347, 351
 beam in bending, 272, 273, 277, 279
 beam in traction, 253
 clamped plate, 235, 236, 240, 245
 construction, 66
 displacement, 216, 224, 294
 doubly clamped beam, 293, 298, 300
 elastic solid, 214, 221
 heat conduction, 127
 heat transfer, 114
 integro-differential equation, 330, 334
 relation with continuous problem, 124,
 133, 157, 161, 181, 196
 relation with continuum problem, 79–84
 relation with minimisation problem, 59,
 73, 123, 155, 223, 273, 294
 Riccati equation, 343, 346
 uniqueness of solution, 56
 viscous fluid, 314, 317
 Velocity field, 149
 Virtual work, 252, 272
 by external forces, 276, 293, 298
 by internal forces, 276, 293, 298
 principle of, 66, 253, 272, 276, 298
 Viscosity, 313

W

Weak derivative, 38
 Weak differentiability, 19
 Weak formulation, 5, 79, 161

Y

Young's modulus, 252, 271, 292
