

# Index

- Accretion, 66, 72  
Accretion disc, 109, **228**, 228–230, 262  
Action-angle variables, 148  
Actions, 148  
Angular eccentricity, 175  
Angular momentum, 212–214, 218, 229, 231, 234, 235, 239, 241, 244, 246, 247, 250–254, 256, 257, 259, 262, 263  
Apoasis, 148  
Argument of periapsis, 148  
Axisymmetric nucleus, 159  
Axisymmetry, 159
- Black hole quadrupole moment, 154, 176  
Black hole spin, 154, 176  
Boyer–Lindquist coordinates, 25
- Centrophilic orbit, 165  
Circumnuclear ring, 210, **221**, 221–224, 236, 251, 262, 263  
Clockwise disc, 181, **212**, 213–216, 218, 220, 225, 231, 234, 237, 243, 248, 250, 253, 259, 262–264  
Cluster disruption, **237**  
Cluster inspiral, **237**  
Coherence time, 187  
Coherence timescale, 246  
Coherent resonant relaxation, 187
- Delaunay variables, 148  
De Sitter precession, 173
- Early-type stars, 206, **211**, 212–214, 216–220, 228, 230, 231, 234, 235, 240, 241, 243, 249–251, 259–264  
Eccentric anomaly, 148  
Eccentric disc instability, 252  
Eccentricity, 147  
Einstein–Infeld–Hoffman (EIH) equations, 153, 191  
Extreme-mass-ratio inspiral (EMRI), 198
- Fragmentation, 206, 228–231, 233, 253, 262  
Frame dragging, 154, 179, 195
- G2 cloud, 224, 225, **258**, 260–262  
Geodetic precession, 173  
Gravitational influence radius, 145  
Gravitational radiation, 198  
Gravitational radius, 146  
Gravitational-wave energy loss, 183  
Gravitational waves, 183, 198, **226**, 226, 227, 254, 255
- Hamilton’s equations, 149  
Hypervelocity stars, 225, 240
- Inclination, 148  
Incoherent resonant relaxation, 189  
Innermost stable circular orbit (ISCO), 32  
Interactions, gravitational, 245, 246, 255  
Intermediate-mass black hole, 206, **225**, 226, 237, 241, 255–257

- ISCO. *See* Innermost stable circular orbit (ISCO)
- Jet coupling, 69
- Jets, 74, 78, 82
- Kepler's equation, 148
- Kerr black hole, 154, 176
- Kozai, **242**, 256  
resonance, 251
- Lagrange's planetary equations, 150
- Lense–Thirring precession, 46, 154, 179, 195
- Line of nodes, 148
- Longitude of the ascending node, 148
- Magnetorotational instability, 59
- Mass coherence time, 188
- Mass function, 206, 216–218, 229, 230, 232–234, 263
- Massive perturbers, 240, 263
- Mass precession, 155
- Mean anomaly, 148
- Method of averaging, 149
- Milky Way, 146
- Molecular cloud, 207, 223, 224, 228, **231**, 231, 232, 234–236, 240, 241, 251–253, 262–264
- N-body simulations, 230–232, 235–237, 251, 252, 257, 263, 264
- Nodal precession, 179
- No-hair theorems, 182
- Nuclear star cluster, 208
- Oppenheimer–Snyder collapse, 6
- Orbital elements, 147
- Orbit-averaged equations of motion, 149
- Osculating orbit, 147
- Paradox of youth, 220, 255
- Periapsis, 148
- Perturbation, 147
- Perturbed motion, 147
- PN2.5 accelerations, 183
- Post-Keplerian motion, 174
- Post-Newtonian approximation, 152
- Potential, 246  
axisymmetric, 242  
external, 241  
gravitational, 240  
Keplerian, 241, 251
- Precession, **241**, 243, 246, 249  
mass, 241, 246, 247  
relativistic, 244, 246, 247, 252
- Pyramid orbit, 165
- Radial action, 148
- Radial eccentricity, 175
- Reduced mass, 148
- Relativistic precession time, 188
- Resonant relaxation, 186, 198, **246**, 248, 263  
timescale, 247
- Rotational influence radius, 195, 196
- Saucer orbit, 161
- Schwarzschild barrier, 198
- Schwarzschild precession, 173
- S-cluster. *See* S-stars, 218
- Self-coherence time, 189
- Semilatus rectum, 150
- Semimajor axis, 147
- Singular isothermal sphere, 146
- Spin precession, 180
- Spin precessional vector, 180
- S-stars, 146, 158, 218, 237, 240, 248, 251, 255, 257
- Star cluster, 237  
inspiral, 237
- Stellar-mass black hole, 68, 198
- Supermassive black hole, **207**, 209, 220, 239  
spin, 244
- Tidal disruption, 206, 207, 223, 226, 228, **231**, 231, 234, 235, 240, 249–251, 256, 262–264
- Tidal radius, binary, 239
- Time eccentricity, 175
- Triaxiality, 164
- Triaxial nucleus, 164
- True anomaly, 150
- Tube orbit, 161
- Two-body relaxation, **246**  
timescale, 246
- Uniqueness theorems, 182
- Warped disc, 48, 52, 60
- Windshield-wiper orbit, 166
