

Index

A

- Adhesion interaction
 - and contact angle hysteresis, 116–119
 - and contact angles, 106–109
 - and evaporation, 100
 - liquid–solid, 116
 - and surface stickiness, 101
 - and wettability, 101
 - and wetting, 102–105
- ADSA. *See* Axisymmetric drop shape analysis (ADSA)
- Advancing contact angle, 37, 38, 41–44, 46, 48, 152
 - modern instrumentation, 101
 - and receding, 100, 112, 113
 - vs. snap-in force, 105
 - and wettability, 115
- Advancing/receding contact angles, 153
 - needle-embedded sessile drop method
 - (*see* Needle-embedded sessile drop method)
 - tilting plate method (*see* Tilting plate method)
- AFM. *See* Atomic force microscopy (AFM)
- Antifogging devices, 72
- Artificial superhydrophobic surfaces
 - lithographic technique/e-beam etching, 76
 - plasma-enhanced CVD technique/
 - electropolymerization, 77
 - raspberry-like particles and superhydrophobic surface
 - preparation, 78, 79
 - roughness and hydrophobic surface
 - coating, 76
 - SEM micrographs of, 77

- silicon, DLC coating, silicon nanowire and poly(vinyl alcohol) nanofiber, 79, 80
 - superhydrophobic surfaces, 76
 - techniques, 78, 79
- Axisymmetric drop shape analysis (ADSA), 17, 18, 26

B

- Biaxial-oriented polypropylene (BOPP) substrate, 115

C

- Captive bubble method
 - contact angle measurement, 10
 - description, 21
 - disadvantages, 21
- Cassie–Baxter State, 73–86, 108
 - artificial superhydrophobic surfaces
 - (*see* Artificial superhydrophobic surfaces)
 - superoleophobicity
 - (*see* Superoleophobicity)
 - The Lotus effect (*see* The Lotus effect)
 - Wenzel state transition, 80–81
- Circle method, 16, 17
- Coffee ring stain effect, 115
- Contact angle hysteresis (CAH) mechanism, 113–115, 150
 - and adhesion, 116–119
 - measurement, 112–113
 - mechanisms, 113–115

- Contact angle measurement, 106–109
 adhesion force, 102, 104, 105
 and adhesion interaction, 109
 Cassie–Baxter state, 108
 pull-off force vs. contact angle
 hysteresis, 106, 107
 pull-off force vs. $\cos\theta_R - \cos\theta_A$, 106, 107
 pull-off force vs. receding contact angle, 108
 pull-off force vs. sliding angle α , 106
 tensiometer vs. $(1 + \cos\theta_R)$, 109
 interactions, 101, 102
 Kevlar fiber, 100
 liquid droplet and solid surface, 99
 sliding angle, 109–112
 static and dynamic, 4
 surface characterization, 115–116
 surface science, 100
 surface/probing liquid–solid interactions, 4
 thermodynamic approaches, 100
 wetting and de-wetting phenomena, 3
 wetting force, 102–105
 and wetting interaction, 105, 106
- Contact angles, 45–49
 apparatuses, types, 41, 42
 comparison, 42, 43
 contact line (*see* Contact lines)
 description, 40
 documentation, 154
 kinetic factor, 40
 three-phase contact line, 151
 types, 42
 Young's equilibrium contact angle, 41
- Contact angles interactions
 measurements, 101
 static and dynamic, 101
 vs. contact angle hysteresis, 101, 103
 vs. $\cos\theta_R - \cos\theta_A$, flat surfaces, 101, 104
 vs. sliding angle, 101, 103
 wettability, 101
 wetting and adhesion force data, 101, 102
- Contact area. *See* Contact area
- Contact lines
 adhesion, 45
 chemically heterogeneous surfaces, 48
 concept and measurement, 45
 configuration and materials, 46, 47
 contact angle data materials and surfaces
 1 and 2, 46, 47
 3D view, partial wetting, 45, 46
 Gibbs technique, 46
 water contact angle data, 48, 49
- D**
- Data interpretation
 adhesion force, 102
 contact angle, 100, 102, 117
 snap-in force and pull-off force data, 105
 wetting, 102
- Directional wetting, 86–94
- Drop image capturing
 ADSA-P method, 18, 19
 Bashforth–Adams equation, 19
 circle method, 16, 17
 commercial goniometers, 16
 contact angle measurements, 16
 curve-fitting methods, comparison of, 19, 20
 ellipse method, 17
 fitting error, 18
 polynomial and B-spline fitting methods, 19
 polynomial fitting, 18
 tangential method, 16
 water sessile droplet, 19, 20
 Young–Laplace method, 16
 $\theta/2$ method, sessile drop, 16, 17
- Drop shape analysis. *See* Drop image capturing
- DropSnake fitting method, 19
- Drop vibration experiments, 69–71
- DTC-coated
 BOPP, 51, 52
 SGE, 51
- E**
- Ellipse method, 17
- Equation of state methods
 empirical fitting method, 144
 interfacial surface tension, 142
 surfaces and testing liquids, 143
 Zisman plot, 143
- Extended Fowkes method, 141, 142
- F**
- Flexo-coated
 BOPP, 51
 SGE, 51
- G**
- Goniometers, 9, 12
 classic ramé-hart model A100, 9
 curve-fitting software, 16
 eyepiece, 9

- model OCA20 from Dataphysics, 9
 - typical, 9
 - wetting process, 9, 10

- H**
- Hydrophilic water–surface separation, 129
- Hydrophilicity, 128–130
- Hydrophobic water–surface separation, 129
- Hydrophobicity, 127–130

- I**
- Ideal surface, 150

- K**
- Kevlar fiber, 100

- L**
- LB film, 127
- Liquid cohesion, 129, 132
- Liquid–solid interactions, 101–109
 - advancing, 113, 116
 - and contact angles (*see* Contact angles)
 - chemical interaction, 114
 - description, 114, 125
 - receding, 113, 116
 - strength, 116
- The Lotus effect
 - confocal laser scanning, 74, 75
 - experimental setup, 75, 76
 - free energy analysis and thermodynamic modeling, 74
 - superhydrophobic, 73
 - surface of leaf, 73, 74
 - theoretical calculations, 74
- Low-surface-energy materials, 100
