

## About the Authors

**Funda Atun**, born in 1983, obtained her Ph.D. in Spatial Planning and Urban Development from Politecnico di Milano (POLIMI, Milano, Italy) in 2013. She is currently a research fellow at Politecnico di Milano in a Horizon 2020 Project, named EDUCEN: European Disasters in Urban Centres: a Culture Expert Network (Cities, Cultures, Catastrophes). In addition to being the author and co-author of several articles/book contributions, she is the author of the book called “Improving Societal Resilience to Disasters. A case study of London’s Transportation system” published by Springer, and the chapter titled “Understanding Effects of Complexity in Cities During Disasters” in the first volume of this books series on Complex Urban Systems. Her research interests include disaster risk management, transportation system planning, complex systems approaches, agent-based modeling, and land use planning.

**Jennifer Eve Day**, born 1978, has a Ph.D. in City and Regional Planning from the University of California, Berkeley, and a master’s degree in Civil Engineering from San Jose State University. She is Senior Lecturer at the University of Melbourne in the Faculty of Architecture, Building, and Planning. She is interested in the forces that compel growth and change in cities, and in the policy levers that can guide that change. Her doctoral research examined welfare changes for center-to-periphery movers in Shanghai, and subsequent work has focused on models of urban change using spatial statistics, the impact of city growth on rural welfare, and the modes of urbanization at the urban fringes including informal and unacknowledged modes. She has built free, open-source software tools designed to assist analysts in low-information environments to identify industrial clusters and urban extents. She has always been interested in justice, and has recently begun to explore notions of justice in transport and welfare models. She currently teaches a class that integrates scholarly thinking on altruism and Sen’s capabilities into a critique of transport modeling and analysis methods.

**Stefan Fenz** (Certified Information Systems Security Professional-CISSP) is a researcher at Vienna University of Technology and SBA Research, an Austrian research center for information security, and founder of Xylem Technologies GmbH, a company supporting SMEs in identifying optimal information security strategies. From 2012 to 2015, Stefan was an appointed member of the European

Network and Information Security Agency's (ENISA) Permanent Stakeholder Group. In 2010, Stefan worked as a visiting scholar at Stanford Center for Biomedical Informatics Research at Stanford University (USA). From 2008 to 2012, Stefan lectured on information security at Peking University (Beijing, China), Beijing Jiaotong University (Beijing, China), Konkuk University (Seoul, Korea) and University of Applied Sciences Technikum Wien (Vienna, Austria). His primary research is on information security, with a secondary interest in semantic technologies and energy efficiency. Stefan received an M.Sc. in Software Engineering and Internet Computing from Vienna University of Technology, an M. Sc. in Political Science from University of Vienna, an M.Sc. in Business Informatics from Vienna University of Technology, and a Ph.D. in Computer Science from Vienna University of Technology. He is a member of the International Federation for Information Processing (Working Group 11.1—Information Security Management), the IEEE Systems, Man, and Cybernetics Society, and The International Information Systems Security Certification Consortium.

**Ernst Gebetsroither-Geringer**, born 1970, studied Ecology and has been a scientist at the AIT Austrian Institute of Technology (AIT, Vienna, Austria) since January 1999. His main research interests include modeling and simulation of complex systems with special focus on spatial modeling and on combining different modeling methods. Within 2007–2008 he was funded to work at the Institute of Artificial Intelligence (IIIA, Barcelona, Spain) of the “Universidad Autónoma de Barcelona,” where he worked on agent-based simulation and multi-method modeling. For several years, he has taught at the Universities of Vienna and Graz. Recently, he started to focus on urban energy management and the development of tools that support urban planning in the context of smart cities. Ernst is also an active member within the European Energy Research Alliance (EERA), where he is involved in the development of an urban simulation platform.

**Pavel Holubec**, born in 1981, a civil engineer and urban planner with a Ph.D. in Environmental Engineering. He is based in Prague, with one foot in the architectural office “Foglar Architects,” where he works as planner, and the other in Czech Technical University, Department of Urban Design, Town and Regional Planning, where he co-organizes the annual conference “Man, Building and Urban Planning” and is an editor of its proceedings. His research interests include philosophy of urban planning, with particular focus on global metropolises, relations between man, society and territory, and a planning theory. He strives to apply Luhmann's theory of complex self-referential systems, together with Deleuzian philosophy of difference in the field of urban and regional planning.

**Justyna Karakiewicz** has been teaching since the 1980s, first at the Architectural Association, then at Bartlett, University College, The University of Hong Kong, and, currently, at The University of Melbourne. Her research interests include complex adaptive systems in urban developments, agent-based and parametric modeling, as well as high-density environments. She has published two books—*The Making of Hong Kong and Sustainability as an Object of Desire*—12 book

chapters, and over 60 papers. Justyna won numerous architectural and urban-design competitions and exhibited her work all over the world, including the Biennale in Venice and Beijing.

**Wolfgang Loibl** born in 1956 in Vienna, holds a Ph.D. in Geography and Regional Science, as well as an M.Sc. in Organization Development. He is a Senior Scientist and Thematic Coordinator for “Smart Cities” research with the AIT Austrian Institute of Technology’s (AIT, Vienna, Austria) Energy Department in the Business Unit “Sustainable Buildings and Cities.” Wolfgang has been working with AIT for 30 years as urban planner and regional scientist; he has mainly been engaged in spatial analysis and modeling. For 10 years, he was teaching GIS-based Spatial Modeling and Systems Modeling at the Universities of Vienna and Graz. Wolfgang continues to be engaged in numerous national and international projects dealing with spatial analysis, urban and regional development, and related policy advice. His research focuses on agent-based modeling for urban dynamics simulation, as well as on regional climate impact research and adaptation. Wolfgang represents the AIT in the Climate Change Center Austria (CCCA); he is also a coordinating lead author of the Austrian Assessment Report 2014 on Climate Change.

**Thomas Mayer** studied Architecture at the Technical University Vienna (Austria) and at McGill University Montréal (Canada). Based on a (publicly funded) 12-month research project, his master’s thesis at the TU-Vienna Department of Urban Planning dealt with the emergence of Montréal’s “Underground City” as well as its architectural, cultural, and political implications (“A Double-bottomed City”, 1998, unpublished). From 1998 to 2014 Thomas Mayer has worked as an architect at Atelier Heiss Architekten (Vienna, Austria, 2010–2014 as partner) with a focus on office design projects ranging from 160 to 160.000 m<sup>2</sup> in size.

**Najd Ouhajjou** is a Ph.D. research fellow at the energy department of the Austrian Institute of Technology (AIT), in the sustainable cities research group. His research focuses on semantic modeling of urban energy systems and decision and planning support software development. He received his B.Sc. in Computer Science from Al Akhawayn University (Ifrane, Morocco) in 2006 and his M.Sc. in Engineering and Management of Information Systems from The Royal Institute of Technology (KTH, Stockholm, Sweden) in 2009. Previously, he worked in the construction industry on the integration of building information modeling (BIM) processes, information demand analysis, and data integration.

**Matthias Scheutz** is currently professor in Tufts University School of Engineering’s Computer Science department (Boston, USA) and is the director of the Human–Robot Interaction Laboratory (HRILAB, Boston, USA). He has a Ph.D. in Philosophy from the University of Vienna (1995) and a joint Ph.D. degree in Computer and Cognitive Science from Indiana University Bloomington (USA, 1999). Matthias’ current research and teaching interests focus on complex cognitive and affective robots with natural language capabilities for natural human–robot interaction and complex hierarchical agent-based models of social interactions. He

has more than 200 peer-reviewed publications in artificial intelligence, artificial life, agent-based computing, natural language processing, cognitive modeling, robotics, human-robot interaction, and foundations of cognitive science.

**A Min Tjoa** is full professor at the Vienna University of Technology (Austria) and director of the Institute for Software Technology and Interactive Systems (IFS, Vienna, Austria). His main research interests are in business intelligence, semantic web, IT security, and environmental informatics. He was a guest professor at the University of Zurich (Switzerland), the Technical University in Lausanne (Switzerland), Czech Technical University in Prague (Czech Republic), the National Institute of Informatics (Tokyo, Japan), and the University of Kyushu (Fukuoka, Japan). Since 2008, A Min has been the Austrian delegate of the Committee of Science and Technology Development (CSTD) of the United Nations. Further since 2008, he has been the chairman of the Austrian National Competence Center for Excellent Technologies (COMET-Program of the Austrian Federal Government) in the field of IT-security. Since 2012, he has been a member of the Executive Committee of the International Federation for Information Processing (IFIP), and he has been IFIP Honorary Secretary from 2013 to 2016. Within IFIP, A Min is also Vice-Chairperson of the Technical Committee for Information Systems (TC 8) and Chairperson of the Working Group on Enterprise Information Systems. He is the Vice-President of Infoterm, the International Information Centre for Terminology (Vienna, Austria). He received an Honorary Doctoral degree (Doctor Honoris Causa) from the Czech University of Technology (Prague, Czech Republic) and an Honorary Professor title from Hue University (Hue City, Vietnam).

**Christian Walloth**, born in 1979, earned his Ph.D. in the international interdisciplinary doctoral programme “ARUS-Advanced Research in Urban Systems” (Universität Duisburg-Essen, Germany) in 2015. His fields of interests include complex urban systems, in particular the emergence of real novelty (new qualities) in complex systems, and the possibilities of influencing the development of emergent systems, specifically possibilities of applying methods of effectuation to urban development. Christian Walloth is chair of the bi-annual symposium of “Urban Systems Research” at the EMCSR “European Meetings on Cybernetics and Systems Research” and editor of the book series on “Understanding Complex Urban Systems.” He is founder of Walloth Urban Advisors, an urban development strategy consultancy.

**Liss C. Werner** is an architect, educator, and researcher focusing on cybernetics and architecture, as well as on the convergence of technology, humanity, and nature. She is adj. assoc. Professor at Taylor’s University in Malaysia, Assistant Professor at CHORA, the Technical University Berlin, and Studio Master at the DIA (Dessau International Architecture Graduate School), where she founded Codes in the Clouds in 2010, exhibited at Venice Biennale 2012. In 2012, Liss Werner was a guest professor at Carnegie Mellon University. In 2014, her company Tactile Architecture became Systemic Design Research Partner of the Bertalanffy

Center for the Studies of the Systems Sciences, Vienna. Liss practiced in the UK, Russia, and Germany, lectured and taught internationally at MIT, CalArts, TexasTech, Syracuse University, Nottingham, Trent, Linz, Kiev, ESARQ, etc. She is chair and peer reviewer of conferences and journals on computation, architecture, ecology, and code, editor of “[En]Coding Architecture” and “Architectural Ecologies.” Werner is a member of The Society of Code Biology, eCAADe, ISSS, and the American Society of Cybernetics. She was trained at the Bartlett University College London, University of Westminster, RMIT Melbourne, and she pursued her Doctor phil in Cultural Sciences at the Humboldt University Berlin.

**Xin Yang** born in 1987, is currently a Ph.D. candidate in Urban Planning at The University of Melbourne, Australia. Her doctoral research examines shifts in household travel welfare in response to job decentralization to peri-urban new towns in China. With a particular focus on government-led job decentralization programs implemented in China’s new town development, her thesis aims to enrich the current empirical evidence on the travel welfare impacts of job decentralization in urban regions. Another main objective of her thesis is to improve the current quantitative modeling approach to measuring travel welfare impacts of urban decentralization, through integrating core ideas of Sen Nussbaum’s Capabilities Approach into the standard welfare models used in transportation modeling and analysis.
