

# Index

## A

- Acceleration constraint equations, 73–74, 76–78, 81, 84
- Adams-Bashforth-Moulton methods, 107–108, 112
- Algebraic constraint equations, 60
- Application examples, 135–167
- Augmented Lagrangian formulation, 93–94

## B

- Baumgarte parameters, 97–106
- Baumgarte stabilization method, 93–95
- Biomechanical foot model, 160–167
- Body-fixed coordinate system, 67–69, 156
- Bouncing ball, 135–140

## C

- Cartesian coordinates, 59–60, 64–67, 76, 157
- Clearance joints, 146–147, 149–158
- Coefficient of friction, 89
- Colliding bodies, 2, 4, 7, 18, 33, 116
- Colliding spheres, 19–20, 28, 31, 33, 42
- Comparative study, 47–49
- Compliant surface, 3
- Compression phase, 16, 32–39
- Computational efficiency, 62, 64, 115, 127
- Concave surfaces, 20
- Conformal contacts, 22
- Constrained multibody systems, 83–87
- Constraint violations, 95, 97–98, 103, 115
- Constraints stabilization method, 97–106
- Contact detection, 2, 93, 159, 162
- Contact detection algorithm, 114–121
- Contact force models, 3–4, 7–8
  - comparative study of, 47–49, 144
  - dissipative, 27–49
  - Hertz, 139
  - Hooke, 18–19
  - Hunt and Crossley, 43

Kelvin-Voigt, 165

- Lankarani and Nikravesh, 138, 144
- linear, 18–19
- pure elastic, 15–23
- Contact forces, 2–3, 6–7, 15, 23, 28, 36, 87–89
- Contact kinematics, 15–18
- Contact knee model, 23
- Contact law, 27–28, 30–31, 33, 37, 139, 151
- Contact mechanics, 1–2, 34
- Contact process, 2, 21, 23, 27, 29–30, 33–34, 6–37, 42–43, 46–47, 137
- Contact surfaces, 5–6, 20, 116, 144
- Contact-impact events, 3–5, 35, 93, 114, 156
- Contact-impact forces, 7, 147–148, 155
- Contact-impact process, 27, 148
- Contacting bodies, 3–4, 16, 18, 22–23, 30, 34, 148
- Contacting surfaces, 2, 7, 18, 20–21, 31, 121, 155, 163
- Continuous contact force model, 4, 7–8, 27, 31–32, 152
- Convex surfaces, 20
- Coordinate partitioning method, 94–95, 127, 129
- Coordinate systems, 57–70

## D

- Damping coefficient, 4, 28–31, 38, 87, 164–165
- Damping force, 4, 28–30, 39
- Degrees-of-freedom, 55, 57–62, 64, 70, 74, 76, 79, 81, 147, 153, 164
- Differential and algebraic equations, 53, 93, 106, 115
- Differential equation, 94–97, 103–104, 107–108, 118–119
- Differential equations of motion, 95, 119
- Differential variational inequality, 4
- Direct integration method, 93, 95–97

- Dissipative contact force models, 27–49  
 Dynamic analysis, 93–97  
 Dynamics equations, 87–89  
 Dynamics equations of motion, 95, 107, 114
- E**  
 Elastic contact models, 15–23, 151  
 Elastic deformation, 21, 33  
 Elastic strain energy, 37  
 Energy dissipated, 4, 30–31, 43  
 Energy dissipation, 2, 4, 21, 23, 27–28, 31–34, 42, 44, 146, 152  
 Energy loss, 19, 21, 23, 27, 30–32, 35, 43, 48, 144  
 Equations of motion, 8, 43, 53–54, 57, 64, 66–67, 83–89, 94–98, 103, 106, 108, 110, 114–119, 122, 153, 159  
 Equivalent mass, 32, 37–38  
 Estimation of Baumgarte parameters, 97–106  
 Euler integration, 106–109  
 External forces, 56, 85, 147  
 External impacts, 20, 135, 142–146
- F**  
 Falling ball, 116  
 Flores et al force, 144, 146  
 Flores et al. contact model, 144, 160  
 Foot-ground contact interaction, 6, 160–167  
 Force vector, 96, 121
- G**  
 Gaussian elimination method, 122–123, 127, 129  
 Generalized accelerations, 73  
 Generalized coordinates, 55, 57–58, 60, 67, 71–73, 81, 84, 94  
 Generalized stiffness, 19–21, 30, 33, 42, 89, 138  
 Generalized velocities, 73, 84, 97, 121  
 Geometric conditions, 17, 144, 159, 162  
 Geometrical constraints, 3, 72  
 Global coordinates, 16–17, 59–60, 66, 68, 70, 79, 88, 156, 161–162  
 Global system of coordinates, 157  
 Guiding constraint equations, 83
- H**  
 Hertz contact model, 19–21  
 Hertz law, 6, 19, 21, 29, 34, 151  
 Holonomic constraints, 72–73, 95
- Hooke law, 21  
 Human knee joint model, 156–160  
 Hunt and Crossley contact model, 29–31  
 Hunt and Crossley force, 30  
 Hunt and Crossley model, 139  
 Hysteresis damping, 30–34, 42–46  
 Hysteresis damping factor, 30–31, 34, 42–46  
 Hysteresis loop, 21, 23, 32, 39, 42, 47, 137, 144
- I**  
 Impact velocity, 7, 29, 31–35, 39, 45–49  
 Impacting bodies, 8  
 Indentation, 88, 114, 148, 159–160  
 Initial conditions, 74, 84, 93, 96, 108, 121, 146, 155  
 Initial contact velocity, 30, 37, 42  
 Initial velocity, 19  
 Instant of contact, 3, 30, 35, 118–119, 136  
 Instantaneous velocity, 34, 37  
 Integration algorithms, 3, 8, 95–96, 106–119  
 Internal damping, 21, 23, 31, 34, 37  
 Internal forces, 55, 85  
 Internal impacts, 146–156
- J**  
 Jacobian matrix, 66, 70, 73, 74, 76–77, 79, 83–84, 94, 96, 120–121, 125, 128, 132  
 Joints with clearance, 147
- K**  
 Kinematic analysis, 70–83  
 Kinematic constraint, 93, 116, 127, 129, 147  
 Kinematic constraint equations, 70–83  
 Kinetic energy, 37  
 Kinetic energy loss, 31–32  
 Knee human articulation, 6
- L**  
 Lagrangian approach, 54  
 Lankarani and Nikravesh contact model, 31  
 Lankarani and Nikravesh force, 7, 144  
 Lankarani and Nikravesh model, 47, 140, 144, 151  
 Linear complementarity problem, 4, 5  
 Linear damper, 28  
 Linear Hooke contact model, 18  
 Linear Kelvin-Voigt contact model, 27, 29  
 Linear momentum, 36, 42  
 Linear spring, 18, 27, 29

Local coordinates, 159, 164, 165  
 Local system of coordinates, 66, 67, 68  
 Lumbar spine model, 7

**M**

Mass matrix, 84, 96, 121  
 Material damping, 29, 30  
 Material properties, 5, 7, 20, 21, 31, 33, 42, 160, 161  
 Maximum deformation, 34, 37, 137  
 Minimum distance, 17  
 Multibody dynamics, 1, 3, 5, 8, 29, 44, 53, 115, 117, 118  
 Multibody systems, 1–5, 7, 29, 31, 33, 53, 55–59, 62, 64, 66, 67, 69–71, 81, 82, 84, 85, 93–95, 98, 106, 108, 110, 113, 114, 116, 120, 122, 127, 131  
 Multibody systems formulation, 23, 59, 71  
 Multistep methods, 107, 108, 112, 113

**N**

Natural coordinates, 64–66  
 Newton-Raphson method, 94, 122, 127–130, 132  
 Non-smooth models, 3  
 Nonconformal contacts, 22  
 Nonholonomic constraints, 72, 95  
 Nonlinear exponent, 21, 30  
 Normal force, 3  
 Normal vectors, 17  
 Numerical integrator, 117, 121  
 Numerical methods, 121–123, 149

**O**

Ordinary differential equation, 106

**P**

Penalty formulations, 3  
 Penetration, 3, 4, 7, 8, 16, 18, 19, 20, 21, 28, 29, 30, 32, 42, 114, 116–119, 121, 139, 141, 142, 144, 155, 161, 162  
 Penetration depth, 32, 42, 116, 121, 155  
 Permanent deformation, 33  
 Plastic deformation, 32, 45, 46  
 Poisson's ratio, 19, 20, 21, 159  
 Post-impact velocities, 34, 35

Potential contact points, 15–17, 87  
 Pre-impact velocities, 34  
 Pure elastic contact force models, 27

**R**

Regularized models, 3  
 Relative coordinates, 59, 62–64, 66  
 Relative indentation, 16, 17, 22, 29, 47, 159  
 Relative normal contact velocity, 30  
 Restitution phase, 16, 28–30, 32–34, 39, 42, 46, 47  
 Revolute joint, 23, 29, 58, 72–74, 76–79, 147, 153, 154, 161, 164  
 Revolute joint clearance, 146, 152  
 Right-hand side of the acceleration, 96, 121  
 Right-hand side of the velocity, 70, 76, 77, 79, 80, 82, 83  
 Runge-kutta method, 95, 107, 108, 110–113

**S**

Simple constraint equation, 80, 81  
 Simple pendulum, 140, 141  
 Slider-crank mechanism, 23, 80, 81, 132  
 Spring stiffness, 18, 19, 87, 164  
 Stiffness parameter, 19, 20, 21, 28, 30, 89, 138, 141, 144  
 Systems of linear equations, 74, 122, 125  
 Systems of nonlinear equations, 127

**T**

Time step, 5, 7, 8, 84, 93, 96, 97, 103–108, 110–121, 140–142, 159, 161  
 Transformation matrix, 69  
 Translational joint, 78–80, 153  
 Types of forces, 84, 85

**V**

Velocity constraint equations, 73, 74, 76, 77, 84, 97  
 Velocity of wave propagation, 33  
 Viscoelastic models, 44  
 Viscous-elastic element, 29

**Y**

Young's modulus, 19, 21, 33
